LA FLEXION DE *PÁNTHĀH* EN VÉDIQUE, ET LES NOMINATIFS EN *-ĒS* DU LATIN

By ANTOINE MEILLET

L suffit de se reporter à la deuxième édition du Handbuch der lateinischen Laut-und Formenlehre de M. Sommer, pp 371 et suiv, pour constater que la question de l'origine des nominatifs latins en -ēs, du type de sēdēs, n'est pas résolue

A rapprocher le type latin uolpēs du lit lãpe, comme l'a fait M. W Schulze, on ne gagne rien le type lituanien est un ancien type en -ie-. lit zēme répond à v sl zemlja Au surplus le baltique a -ē et non -ēs. Et, si l'on rapproche fidēs de sēdēs, comme l'a fait Brugmann, on ne comprend pas ce qui peut être expliqué par là sēdēs, sēdis et fidēs, fidēi ont des flexions entièrement distinctes

Le vocalisme montre que $s\bar{c}d\bar{c}s$ n'a rien à faire avec gré δos , ni $m\bar{o}l\bar{c}s$ avec $m\bar{o}lestus$ Du reste aucune forme de nominatif de thème en -stels que seraient $s\bar{c}d\bar{c}s$ et $m\bar{o}l\bar{c}s$ n'existe dans aucune langue indoeuropéenne, le latin lui-même ne connaît que le type $hon\bar{o}s$ Quant à $p\bar{u}b\bar{c}s$, rien n'autorise à y chercher un thème en -es- $p\bar{u}bcr$ a un ancien r, témoin $p\bar{u}bert\bar{a}s$

L'hypothèse que M Sommer met en première ligne, à savoir un ancien nominatif en $-\bar{e}(\iota)s$ de thème en $-\iota$ - serait plausible Mais M. Sommer ne signale, hors du latin, rien de comparable Or, pour l'explication d'une forme, ce qui importe avant tout, c'est de trouver une forme qui lui corresponde

Il y a en indo-iranien un nom dont la flexion rappelle le type $s\bar{c}d\bar{c}s$. C'est celui dont, en védique, le nominatif singulier est $p\acute{a}nth\~{a}h$, l'accusatif singulier $p\acute{a}nth\~{a}m$, le nominatif pluriel $p\acute{a}nth\~{a}h$ — l'instrumental pluriel $path\acute{a}bhih$, le locatif pluriel $path\acute{a}su$ — le génitif-ablatif singulier $path\acute{a}h$, l'instrumental singulier $path\~{a}h$, l'accusatif pluriel $path\acute{a}h$, le génitif pluriel $path\acute{a}m$ Il n'y a pas à tenir compte des formes en -n-de l'Atharvaveda le nominatif pluriel $p\acute{a}nth\~{a}nah$ qui se trouve sept fois, est une formation analogique grâce à laquelle était évitée la confusion avec le singulier $p\acute{a}nth\~{a}h$, à l'accusatif singulier, où aucune confusion n'avait lieu, l'innovation n'a pas prévalu $p\acute{a}nth\~{a}nam$ se lit une seule fois contre 19 $p\acute{a}nth\~{a}m$ (sur tous ces faits, v. la précieuse étude de M. Lanman, Noun-inflection in the Veda, pp 441 et 470). Les monuments iraniens confirment le caractère indo-iranien des formes védiques:

l'Avesta a pantâ au nominatif singulier, pantam à l'accusatif et $pa\theta am$ au génitif pluriel, $pa\theta \bar{o}$ au génitif singulier et à l'accusatif pluriel; la forme en -i- est attestée indirectement par l'accusatif singulier $pa\theta im$ du vieux-perse, qui montre une normalisation de la flexion dans le parler déjà très évolué qu'est le perse des inscriptions achéménides; d'autre part, on voit, par un nominatif $pa\theta a$, par un accusatif $pa\theta am$ des gatha, que la flexion fortement anomale du mot s'est altérée de bonne heure en iranien

L'exemple de $p\acute{a}nth\ddot{a}h$ est unique en indo-iranien Car véd. $m\acute{a}nth\ddot{a}h$, dont on n'a la flexion que partiellement, appartient à une racine dissyllabique, l' $-\ddot{a}$ - a chance d'appartenir à la racine, et le cas est, par suite, différent de celui de $p\acute{a}nth\ddot{a}h$

Hors de l'indo-iranien, une flexion du nom du "chemin" pareille à celle de véd pánthah n'est pas attestée. En slave et en baltique, l'histoire commence trop tard pour qu'une flexion aussi archaigue soit conscrvée Toutefois, le contraste de v sl poti "chemin" et de v pruss. pintis "chemin" montre que le jeu du vocalisme radical observé dans véd, pánthāh, patháh, pathísu a existé dans le domaine slave et baltique. On entrevoit par là que la flexion connue par l'indo-iranien y a existé aussi. — Gr. πάτος "chemin" et πόντος "mer" sont des thèmes dérivés par lesquels on aurait évité le vieux nom anomal du "chemin" La parenté avec skr pánthāh, etc., est du reste incertaine — L'arm. hun "chemin" n'enseigne rien — Quant à lat pons, dont le sens ne concorde pas exactement avec celui de skr pánthāh et de v sl. poti, et dont par suite le rapprochement est contesté (L Havet a toujours soupconné, à tort ou à raison, qu'un rapprochement avec le groupe de pendo pendeo, où le -d- est secondaire, rendrait compte du mot), la flexion est la même que celle de mons et de mens, et il n'y a, en tout cas, rien à en tirer ici — Le mot n'est clairement attesté que dans la partie orientale de l'indo-européen en indo-iranien, arménien, slave et baltique.

Deux traits caractérisent le type latin à nominatif en -ēs-. Le premier est que des formes en -i- s'y juxtaposent à des formes de la flexion consonantique et au nominatif en -ēs- · le mot uātēs, uātem a ungénitif pluriel uātum (à côté de uātrum), tout comme le védique a pánthāh, pánthām, mais pathām, pathísu. Et la forme en -i- est attestée par un nominatif uātis chez Plaute et par la flexion régulière en -i- de irl. fáith. — En face de sēdēs, sēdem, le génitif pluriel est sēdum. — La concordance du type latin avec le type indo-iranien de skr. pánthāh est complète.

Le second trait est celui-ci dans véd pánthāh, pánthām en face patháh, pathísu, l'alternance vocalique est la même que dans dán,

dántam, en face de datáh, datsú. Or, la voyelle longue radicale de lat. sēdēs, mōlēs, en face de sědeō, mŏlestus, s'explique seulement au nominatif singulier La longue a été généralisée en latin où les alternances vocaliques ont été beaucoup simplifiées, mais on aperçoit un vocalisme de nominatif singulier, reste d'une alternance comparable à celle qu'offrent les formes védiques.

Si le rapprochement proposé est exact, la flexion de uātēs, uātum, uātibus et de sēdēs, sēdum, sēdibus, pareille à eelle de véd. pánthāh, pathām, remonte à l'indo-européen. On peut se dispenser de rechercher comment s'est formé le type e'est un problème de préhistoire de l'indo-européen, les données sont trop peu nombreuses pour qu'il soit sage de l'aborder.

En indo-iramen, véd. $p\acute{a}nth\bar{a}h$ est une survivance unique En latin au contraire, le type $s\bar{e}d\bar{e}s$ est représenté par un bon nombre d'exemples; v. Neue-Wagener, Laternische Formenlehre, I p. 400 et suiv. Ces exemples sont pour la plupart nouveaux et tiennent à la difficulté que faisait le nominatif des thêmes consonantiques. Le latin a paré à cette difficulté dans beaucoup de mots à l'aide de -i-, et il a iuvenis en face de gén plur iuvenum, cf skr yûvan-, ou apis en face de apum, etc. Ailleurs il s'est servi de -ēs, et c'est ainsi que, à côté de $pl\bar{e}bs$, il a $pl\bar{e}b\bar{e}s$; à côté de $n\bar{u}bs$, $n\bar{u}b\bar{e}s$. Du thème can- établi par abl sg cane, gén plur. canum, il y a les deux formes de nominatif, l'une usuelle canis, pareille à iuvenis, l'autre canēs, rare, pareille à $u\bar{u}t\bar{e}s$

Si lat pons est apparenté à skr pánthāh — ee qui demeure probable — on s'explique ainsi le nominatif pons au lieu de la forme ancienne le type en -ēs- de sēdēs, uātēs ne s'est maintenu ou étendu que là où il était utile pour éviter des formes obscures et courtes, telles que seraient *sēs, *uās, or un ancien *pontis, qui a passé à pons, ne faisait pas plus de difficulté que *mentis (mens) ou *montis (mons).

Comme il s'est produit des interférences entre le type *uātēs, *uātom (gén. plur), *uātī-, identique au type véd pánthāh, pathām, pathīsu, et l'aneien thème consonantique *sēd- (noin d'action radical de *sed) qui a reçu un nominatif sēdēs par suite de l'obscurité qu'offrirait un nominatif de la forme *sēs, il est impossible de faire un départ entre les origines des divers substantifs latins à nominatif en -ēs L'étymologie ou la formation de la plupart sont du reste inconnues Il serait malaisé d'expliquer pourquoi l'on a nūbium en face de nūbs, nūbēs (nūbum étant exceptionnel), tandis que l'on a sēdum. Ici comme à beaucoup d'autres égards, le latin offre l'aboutissement d'un développement complexe, traversé par des influences multiples, dont le détail ne se laisse pas restituer.

Abstraction faite des innovations analogiques plus ou moins récentes qui ont troublé la netteté du type, le latin conserve ici, plus largement que l'indo-iranien, une flexion qui caractérise bien la complication de la morphologie indo-européenne. Attesté tardivement, le latin n'a pas l'archaisme général du védique, les alternances de la flexion de véd pánthāh ne sauraient s'y retrouver. Mais, au lieu d'un exemple unique du type, il en a toute une série. Les exemples du type uātēs, uātum sont de ces survivances par lesquelles le latin est demeuré si instructif pour l'historien des langues indo-européennes.

Note additionnelle — L'article ci-dessus a été envoyé aux organisateurs du recueil longtemps avant la publication de l'étude de M H Pedersen, La cinquième déclinaison latine, Copenhague, 1926 Depuis, M Wackernagel a, à son tour, traité de skr pánthāh, K Z, vol LV, pp 104 et suiv (1927) Voir aussi Stolz-Leumann, Lat Gramm (1928), Sur plusieurs points essentiels, je suis heureux de constater que mes vues concordent avec celles de ces éminents linguistes certains égards, la doctrine exposée ci-dessus en diffère, il est impossible d'entrerici dans une discussion qui serait gauche. Je note seulement que le vocalisme, sûrement ancien, de véd pánthāh, pánthām, av pantå, pantam ne se comprendrait pas si l'ā était un élément essentiel du mot; car l'élément radical serait alors au degré zéro Comme dans lat uātēs, etc., l'-ës final du nominatif est un élément adventice Dès lors, l'i de véd pathibhih pathisu n'a pas à être considéré comme étant en alternance avec l'ā de pánthāh Le genre féminin de v perse paθim ne prouve pas que l'on ait ici un dérivé en -ī- tout nom de genre animé peut être ou masculin ou féminin en indo-européen suivant la façon dont il était conçu, or, la notion de la "route" pouvait être conçue comme féminine, ainsi que le montre avec évidence gr òbos, féminin, cf aussi lat usa, etc Sl. pott doit être un ancien thème en *-s-, car on n'y signale aucune trace de flexion consonantique

Collège de France

ON DIMINUTIVE PRONOUNS IN JAINA SANSKRIT

By MAURICE BLOOMFIELD

A READER of Aptaprabhasūri's Çāntinātha Caritra¹ cannot fail to notice the large number of pronouns with suffixed or infixed ka which on closer inspection show some kind or other of diminutive function. This text of 4890 clokas contains sixty cases, and such cases appear, to be sure much more sporadically, in other narrative Jaina texts, beginning with Hemacandra (Triṣastiçalākāpurusa Caritra, and Pariçiṣṭaparvan) where they are quite rare. For example, Hemacandra's Çāntinātha Caritra (Triṣaṣti, Fifth Parvan), containing 2143 clokas, does not show a single diminutive with ka, as contrasted with the sixty cases of Aptaprabha's treatment of the same theme

The quasi-biografies treated by Hemacandra in his great chronicle, the Trisasti and its appendix, the Paricistaparvan, as well as other personal chronicles (Caritras and Prabandhas) not touched upon in these two texts, are taken up by the later literati (Sūris) with a degree of eagerness that would be furious, if it were not so pious Especially, each of the 24 Jama Saviors is again and again the theme of a Caritra (Carıta), Mahākāvya, Kathānaka, or Purāna, whose author — with all due and boundless respect for Hemacandra, "the all-knowing in (this) age of brass" 2—seems to be impelled by the desire "to go him one better" I have listed a goodly number of such works on Parcyanātha, at the beginning of my digest of Bhāvadevasūri's Pārçvanātha Caritra, published under the title of "The Life and Stories of the Jaina Savior Pārçvanātha" (Baltimore, The Johns Hopkins Press, 1919) ³ The "history" of the sixteenth Savior Cantinatha is not only written by Hemacandra and Autaprabha, but I have also in my hands a Çantınatha Mahakavya by Munibhadra süri, an claborate work in nineteen sargas and 4349 stanzas 4 Guérinot's Essai de Bibliographie

- ¹ Published by the Jainadharmaprasārakasabhā at Bhavnagar in 1917 (Vīrasamvat 2443, Vikramasamvat 1973)
 - ² Kalıkālasarvajñaçrīhemacandra
- ³ Hertel, in the Introduction to his Translation of Hemavijaya's Kathāratnākara, p. xv (Leipzig, 1920), mentions in addition a Pārçva-caritam by Hemavijaya, cf. also his 'Indische Erzahler,' vii, 173, and Charpentier, ZDMG, lxix, 321 ff
- ⁴ Edited, as nr 20 of Yashovijaya Jama Granthamālā, by Shravak Pandit Hargovinddas and Shravak Pandit Bechardas, Benares, Vīrasamvat 2437 (A D 1911)

Jaina reveals other Çāntinātha Caritras one by Sakalakīrti (p. 88); another by Devacandrasūri (p. 84); and a Çāntināthapurāṇa (p. 55). In the same way Hemacandra's brief account of the female Savior Mallinātha, the nineteenth Tīrthamkara, in 266 stanzas, as followed by Vinayacandrasūri's Mallinātha Caritra in eight sargas containing no less than 3783 stanzas.

The chief difference between Hemacandra and his successors is that the latter have taken to "enwombing"—garbhita as the Ilindus say 4—more or less lengthy stories from the general stock of Jaina fiction, in illustrating the moralities which the Arhats and others are made to preach in the course of their spiritual careers. These rather extraneous stories often really make up the bulk of the book, the biography of the hero holds together these stories by a very slender thread. Thus the long story of Nala and Davadantī, illustrates samyaktva, or perfection, in all but the first four clokas of the sixth Sarga in 561 clokas of Vinayacandra's Mallinātha Caritra. My digest of Pārçvanātha shows up this habit very clearly

But these texts differ also in style and literary pretentiousness—It is a far cry from the Mahākāvya style of Pradyumnācārya's Çālibhadra Carita written in the most advanced alamkāra diction to the much later Pañcadandachattraprabandha, which is written in popular Sanskrit, much dashed with Prākritisms—The texts differ in this regard, as well as in the extent to which they employ popular words (deçī) or words and grammatic forms which they have drawn from Sanskrit koças and vyākaranas And they differ also in the linguistic habits of the individual writers, of which Ajitaprabha's predilection for diminutive pronouns is a good illustration.

- ¹ Cf the citation of two verses from the Çāntinātha Carita of Devasūri (p. 75), apparently the same text—It would appear from p. 339 that Devasūri translated his work from the Prākrit
 - ² Trisasti, Parvan vi, 201^b ff
- ³ The Mallinātha Caritra of Shree Vinaya Candra Suri, edited by Shravak Pandit Hargovinddas and Shravak Pandit Bechardas Benares, Veer-Era 2438 (A D 1912)
- 4 See the colofons at the end of several of the sargas of the Mall ${
 m mathan}$ tha of the preceding note
- ⁵ So the Jamas call Damayanti, the story follows closely that of the Kathākoça, pp 195 ff. of Tawney's Translation See Winternitz, Geschichte der Indischen Literatur n², 325
 - ⁶ See the author JAOS xlin, 262 ff
- 7 Edited and translated by A. Weber, Abhandlungen der Koniglichen Akademie der Wissenschaften, Berlin 1878
- 8 See my article, "Some aspects of Jama Sanskrit," in "Festschrift Jacob Wackernagel," pp $\,226$ ff

The following texts and their sigilla are at the base of this exposition of the diminutive pronouns in Jaina Sanskrit which will doubtless be modified but little by further instances derived from the same sfere

HEM. MALL. Hemacandra's Mallınātha Caritra. Page 201^b ff of Parvan vi of Trışastıçalākāpurusa Caritra.

VIN MALL The Mallinātha Caritra by Vinayacandrasūri Benares, Vīrasamvat 2438 (A.D. 1912) See above

ÇĀNT The Çāntinātha Caritra by Ajitaprabhasūri Bhavnagar, 1917. See above.

Pārç The Pārçvanātha Carıtra by Bhāvadevasūrī Benares, Vīrasamvat 2438 (A D 1912)

SAMAR The Samarādītva Samksepa by Pradyumnācārya. Edited by Hermann Jacobi, Ahmedabad 1906

Çāl The Çālıbhadra Carıtra by Dharmakumāra Benares, Vīrasamvat 2436 (A D 1910) Elaborated by the author, JAOS xlnı, 257–316

The following pronominal diminutives are gathered from these texts, they are to be considered in connection with forms found in Hindu Grammars, and also in Bhadrabāhu Caritra, below pp 22–24, and see also the old Vedic pronominal diminutives which have been treated by Edgerton, JAOS xxxi, 93 ff Their relation to the Jain forms is discussed below

First person, mayakā and āvakābhyām

Second person tvakam and tvayakā

Demonstratīve sa and ta sakah, sakā, takam, takayā, and takāu.

Demonstrative stem ima imakam, imakāih, and imikām (fem).

Demonstratīve stem adas asakāu

Relative stem yaka

Pronominal adjective anyakat.

GENERAL MATTERS

The primary use of a diminutive is, of course, smallness, but I have noted only one example of such use, to wit, Çānt 6 264 çīghram eva kumāreņa prachannam jagrhe sakā (sc suvarnakinkinīmālā), "As quickly as possible the prince surreptitiously grabbed that small (chain of golden bells)" Later on, sts 267, 271, the chain of bells is expressly spoken of as kinkinīmālikā, a diminutive of which sakā kinkinīmālā is a parafrase.

Comporting with the persistent moralizing drift of Jaina texts, the use of the diminutive pronoun is almost entirely mental or spiritual, being also largely connected with matters of Jaina religion. And the entire mass divides itself not unevenly into the two grand categories of pejorative and meliorative, that is, the diminutive pronoun expresses something bad or good. Two consecutive passages impose upon the relative pronoun yaka part of the burden of contrasting people who are able to resist the lure of the senses with people who succumb to their senses the pronoun is used effectively at pretty nearly the opposite poles of spiritual quality

Çānt. 3 406 pravrajyām pratīpadyāpi syur yake viṣayāiṣinaḥ . . . ghore te patanti bhavārnave,

"Even they who have wandered forth as ascetics, yet, weak creatures, seek the pleasures of the senses, fall into the gruesome ocean of (repeated) existences"

Çānt 3 407 syur *yake* nırapekṣās tu vıṣayesv arthıtā api . . . te 'tra bhavanti sukhabhājınah,

"They who, even when tempted (solicited), remain *loftily* indifferent to the pleasures of the senses, partake here of bliss"

One passage has two diminutive pronouns, one after the other, in different nuances, one of which clearly expresses blame (of one's self), the other praise of some sort

Çānt 3 259 mitrah provāca he subhru nātinārtham mayakā tvakam, ānītā kim tu mitrasyāmaradattasya hetave,

"Mıtra (Mıtrānanda) said (to the princess) 'Not for myself, O beautiful-browed lady, have I perfidiously carried you off, noble lady, but in behalf of my friend Amaradatta,'" For the story see Kathākoça, Tawney's Translation, p 154

PEJORATIVE USES OF THE DIMINUTIVE PRONOUN

These divide themselves, without hard and fast lines, into five kinds

- 1 Execration of sin and improper conduct.
- 2 Execration of inherent or congenital depravity or evil
- 3. Ineptitude, or unworthiness
- 4 Self-depreciation, or modesty
- 5 Misery, unhappiness, or ill-luck

1 Execration of Sin and Improper Conduct

In this class are placed such cases as represent direct infraction of Jaina teaching The sin that is reported furnishes a commentary on the diminutive, or, vice versa, the diminutive adds a touch of scorn or reprobation to the narration of the sinful deed

Çānt 6 321: viçvaste vyākule dīne . . praharanti yake pāpā dhruvam te yānti durgatim,

"The wicked sinners who strike a confiding poor man in trouble certainly come to grief." Pāpāh, after yake, shows what the pronoun really means

Samar 4 330 tad api pratipannam ca kṛtam ca mayakā takā tadā baddhaṁ mayā karma parınāme sudārunam,

"I wickedly assented to that, and did thus, and established for my sinful self in consequence a grievously hard karma" The speaker has been persuaded by his mother to eat of the flesh of a "dough-cock" which she has killed Mayakā and sudāruna illustrate each other. For this extreme example of ahinsā see my "Life and Stories of the Jama Savior Pārçvanātha," pp 195 ff, Hertel, "Geschichte von Pāla und Gopāla," p 84

Samar 2 278 utthīto 'ham mūrchītam takam vīksya kimkṛtyamūdho 'sthām, viṣād uparataḥ sa tu,

"Arising, I beheld that *rile person* in a faint, and was at a loss as to what to do Then he died from the poison." The person who dies has tried to poison the speaker by sprinkling one of two sweetmeats with poison. By mistake he has himself eaten the poisoned one

 ζ ānt 1 146 āha mangalo mantrınam pratı yady avaçyan idam karyam $mayak\bar{a}$ karma nırghrnam . ,

"Mañgala said to the immster 'If this hemous deed is unavoidably to be done by *rillamous me* '" (then I make the following stipulation) Note nirghrnam after mayakā

Samar 4 201 tac chrutvā mayakā prstah prabhuh, "Having heard this the Lord (a Muni) was asked by wicked me". The person asking is a cruel man, devoted to hinsā, who has cried out, "Slay these wicked men," when certain criminals are being led to execution. The Sage tells him that, in a former birth, he had calumniated an innocent ascetic

Çānt 6 251 athavā kim vikalpenādrçyarūpo 'nayā saha, gatvāham api vīkse tad yat karoty $asak\bar{a}u$ khalu,

"Why need I be in doubt? I shall also in invisible form go along with her, and find out what that vile woman is doing." Prince Gunadharma suspects the princess Kanakavatī of Rāksasī-practices

Samar 4 141 hrtā trāilokyasārākhyā ratnāvaly āgasāmunā . vadhyas tena stena *īrāsakāu*,

"The necklace named Trāilokyasāra has been robbed by that villain . . therefore that wretch must be executed like any thief."

Samar. 4. 513 baddham tṛtīyapṛthivyām ca narakāyur na cāsakāu, dharmacintāmanım mohaparāyattā prapadyate,

"Life in hell is ordained for her in the third earth; and that vile woman, overwhelmed by delusion, does not obtain the thought-jewel of religion" The woman in question is the Queen Nayanāvalī who lives in adultery with a leprous slave, and trickily chokes to death her husband who is in a faint, pretending to fall upon him in grief over his condition. See my "Life and Stories of the Jaina Savior Pārçvanātha," p. 196, Hertel, "Geschichte von Pāla und Gopāla," pp. 84 ff

Çānt 3 41 yah kaçcıd avanīnātham jātayāmam¹ vadısyati, bhavısyatı sako 'vaçyam akāle 'pı yamātıthıḥ,

"Whosoever shall say that the King is superannuated, that rascally person unfailingly, even tho his allotted time has not yet come, shall become Yama's (Death's) guest "From a proclamation forbidding reference to grey hair on the king's head

Çānt 6 1056 punah prstā vadhūtī tāih kim bhadre tvayakā saha, rosasya kāranam kimein na jātam dayitasya te,

"They again asked the wife 'Did not, O good woman, some cause for anger arise between your beloved (husband) and your refractory self?" Question put to a wife who has been left by her husband

2 Execration of Inherent or Congenital Depravity or Evil

In a smaller group of cases the evil or wickedness that is excoriated by implication of the pejorative pronoun lies in the very nature (svabhāva) of the subject there is no infraction of any religious tenet. The subject acts badly because he is bad and cannot be otherwise

Çānt 6 411 dastaḥ cresthisuto nāgāic caturbhir imakāih saha,

"The merchant's son was bitten by these four evil serpents at the same time"

Çānt 3 463 dadhāve khadgam ādāya prs
ṭhe kopapar $\bar{a}sak\bar{a}u,$

"That wicked (Siren) with a sword rail after (the two adventurers) in high dudgeon." A siren running after two escaping merchants, to kill them

Çānt 5 282 athānena (se sarpena) samādīstā tadartham pakṣiṇī sakā, cañevā krtvā mumocāinam nītvā kvāpī mahāhrade,

"That evil bird was bidden to that task, she took the frog into her bill, and left him in some spot of a great lake." The bird cooperates with her mate, a serpent, and carries a frog, the serpent's friend, to a great lake, whence he is to bring food (other frogs) to the serpent, which is perishing from hunger in his own pool that has dried up during a

¹ Emend jātayāmam to yātayāmam Prākritic pronunciation

drought. The bird-mate of the serpent (a sārikā) is naturally as base as her husband

Par. 2 231. mātā provāca gaņikām apatyc vāiriņī tava, yakābhyām udarasthābhyām mṛtyudvāre 'si dhāritā,

"Her 'mother' said to the hetaera. 'These two children of yours are your enemies, because the vile creatures, even when they were in your womb, brought you to the door of death '"

Çānt 6. 585 apaninye sahā tena çirortir mantravādinā,

"That racking headache was removed by the spell-monger."

3 Ineptitude or Unworthiness

In a fairly large number of examples the suffix expresses the qualities of the caption. The boundary line between this class and implications of impiousness or intrinsic deficiency is, of course, not always absolute

 ζ ānt 4 386 mārgayāmāsa tān pa
ñca kanān jyeṣthavadhūm tatah, palyāntarāt samāniyārpayāmāsa
 $sak\bar{a}$ pi tān,

"(The merchant) asked the eldest wife for those five grains (of rice), and that *inept woman* took them from a sack and handed them to him" From the "parable of the talents" in which the oldest daughter-in-law of a certain nicrehant fails to increase the grain intrusted to her keeping. Cf. my "Life and Stories of the Jaina Savior Pārçvanātha," p. 120

Mah 1 236 tāiragcam mānusam divyam māithunam *mayakā* purā yat kṛtam vyutsrjāmi tat,

"The sex-life that I, poor creature, have led as animal, human being or god — that do I repudiate" The glossator knows no better than to say mayakā, mayā

Pārç 1 478 kumāra $mayak\bar{a}$ putranīrviçese 'pi yat tvayī durjanāhivaeastīvravisavihvalacetasā viruddham idam ārebhe . ,

"O prince, the hostility which has been practised by foolish me upon you, even tho you were like a son to me, because my mind was led astray by the strong poison of the serpent speech of a rascal (that I will atone for) "Vihvalacetasā shows just what mayakā means

Pārç 1 419 acıntayac ca yad aho paksıno 'pidṛçī matıḥ, upahartum tadā martyabhave kım krtaın anyakat,

"(The merchant) then reflected 'Behold, if a mere bird (parrot) has such a disposition to do good, then what other poor deed (is fit for one) who is in the estate of man?" The merchant has obtained a fruit of immortality from a beneficent parrot, and is deciding not to use it for himself, but to have it planted for the good of all mankind. See the sequel. The glossator merely says anyakat, anyat.

Çānt. 3 210 tataç cājñāpito rājñā rakṣakas tvayakāçu re, so 'tra baddhvā durācāro vaṇig ānīyatām iti,

"Then the king ordered the bailiff: 'Sirrah, you wretch, promptly bind and bring the misbehaving merchant here!" Tvayakā and re explain each other

Hem Mall, stanza 223 kathāç ca duḥkathā eva bhavadguṇakathām vinā, yakābhis tittirir iva vāgbhir vipadam açnute,

"All tales are poor tales if they leave out the tale of your virtues;—tales by whose wretched words one goes to destruction, like a (chattering) partridge." From a stotra of the Savior Mallinātha.

Samar 2 185 tad vīksya mayakādhyāyi . tad ito nipatāmy aham . . patito amātra gātrabhanganipīditah,

"Seeing this, I, poor fool, thought—therefore I shall take a fall from here—I fell, and am (now) here at home, afflicted with broken limbs." An elefant (mayakā, the unlucky victim) is tricked by his enemy into taking the bhṛgupāta (suicide by throwing himself from a precipice), in order that he may rid himself from his animal existence and become a Vidyādhara

4 Self-depreeration, or Modesty

Quite common are the instances in which the speaker states some act which is really worthy, but belittles or disavows his merit. He then resorts to the diminutive mayakā, in the sense of "by my humble self" (or German, "bei meiner wenigkeit"), and there is, as a rule, nothing else in the sentence to indicate this rather subtle touch. It would appear sometimes as if the real point were, to call attention to the speaker's merit by an understatement which would naturally elicit precisely the opposite effect in the mind of the hearer. Thus

Çānt 4 794 — ittham çāntijineçvarasya carite — aṣṭamaḥ prokto 'yam mayakā bhavah.

"Thus the eighth existence (of the future Arhat) has been set forth in the chronicle of the Jina Lord Çānti (Çāntinātha) by my unworthy self" Similarly 6–1631 ittham çāntijineçvarasya mayakā prokto bhavo dvādaçah

Pārç 2 874 svāmīpādadvayīrenukaņena $mayak\bar{a}$ pī yat nīrvyūdham,

"What has been planned by my unworthy self who am a grain of dust on the feet of Your Majesty" In the speech of a minister who has managed well his kingdom during its king's enforced absence. The compound preceding mayakā rivets its meaning

Çānt. 2 314 so 'vadat' mayakā devi kim na prāptam mahītale, dṛṣte tvaddarçane puṇyarahītānām sudurlabhe, "What object. O goddess, that can be gotten on earth have I, unworthy person, not obtained, in that I have beheld you who are very hard to reach by them that have no merit?" Mayakā and puṇyarahītānām illustrate each other in this speech of a person who has appealed to a divinity.

Çānt 3 156 uvāca sūtrakre cakre prāsādo mayakā kila,

"The architect said 'To be sure, this palace has been erected by my unworthy self'" The palace is splendid the architect deprecates his ment

Çānt 5 313 eko 'vocan mayāıvedam cāru ratnam upārjītam, dvitīyah smāha mayakā tvam lobham kuruse vrthā,

"One (merchant) said 'By me alone has this precious jewel been obtained' The second said 'By my good self you show greed in vain'" Two merchants quarreling over the possession of a jewel while on a river, both tumble in and drown

Çānt 1 112 kuto 'py ānīya mayakā mukto bhavati bālakaḥ, sa mantrın bhavatā grāhyah,

"The boy has been taken by my good self from some place or other and left, you, O minister, must get hold of him" Speech of a divinity who finds a substitute boy for the minister's son who is leprous, but has been ordered to marry a princess

Çānt 6 1455 akkādva çresthinah putrah kaçeid atrāyayāu pure, arpitam $mayak\bar{a}$ tasyopanadyugmani manoharam,

"Mother, to-day a certain merchant's son has come here to the city to-day a fine pair of shoes was given him by my good self". The speaker, a shoemaker, trickily intends to cheat the merchant's son out of all his property in pay for the shoes. See for this story, Vin. Mall 8-735 ff, Hertel, Indische Erzahler, vol. vii, pp. 122 ff.

5 Misery, Unhappiness, or Ill-luck

In this group the subjective element is altogether wanting the person to whom the diminutive pronoun refers is not responsible for the evil indicated by it. This class of diminutives, then, implies pity, rather than criticism, nevertheless there are in it, here and there, fine shades of blame for neglect, improvidence, lack of foresight, etc. which are at the bottom of the sorry plight of the subject. Thus, from the point of view of the writer the pejorative touch is not altogether wanting indeed, here as elsewhere, any strict compartmental grouping of shades of diminutives rests upon convenience rather than precision in the circumstances which give rise to its expression.

We may introduce this class with an example in which the ka of the pronoun is reinforced by another ka in the noun to which it belongs, to wit

Vın Mall. 8 214 sākhyad dev*emakam* kāsṭhavāha*kam* drutam ānaya,

"She (the queen) said 'Your majesty, bring this wretched woodcarrier here quickly'" The queen has recognized her husband in a former birth, who, in his turn, is passing his present existence as a lowcaste man

The following lists this rather large class

Çānt 6 914 tataç ca kathītā tena khadgavisinrtijā kathā, tathāpi dandīto rājnānarthadande krte sakah,

"Then he (Samrddhadatta) told what had happened through his forgetting his sword, but even so the unfortunate man was punished by the king, the punishment being undeserved." Samrddhadatta has forgotten his sword outside his house, thieves find it, commit murder with it, and suspicion fastens itself unjustly upon Samrddhadatta.

Çănt 6 919 grāmaparsady upavisto yāvad āsīt sako 'nyadā,

"As that unlucky (Samrddhadatta) was sitting once in the village hall". The same Samrddhadatta as in the preceding item

Çānt 5 377 tataç ca devarājena bhūbhujā bhanīto 'nujah, gantavyam tvayakānyatra muktvā me vīsayam punah,

"King Devarāja said to his brother 'Go, wretched youth, to another country, moreover out of the reach of my senses!" Devarāja is exiling his younger brother Vatsarāja for no other reason than that the people love him best

Çānt 5. 380 devî provāca he vatsa yady evam *trayakā* saha, āgamışyāmy aham apı dhruvam,

"The queen said (to Vatsarāja) 'If so, then I will go there with you, poor child'" Sequel of the preceding Vatsarāja's mother (as well as Devarāja's) proposes to share his exile

Çānt 5 465 *āvakābhyām* adhanyābhyām yad adyāpi samesī na,

"If even now you will not come with us two wretched women" Āvakābhyām and adhanyābhyām in reciprocal comment

Çānt 6 631 iti prokte 'pi sā yāvat sulasam tyajati sma na, svayam evākkayā tāvad ity abhāni sako 'nyadā,

"When (the hetaera), thus addressed, did not abandon Sulasa, then the bawd (mother) quite by herself spoke to that wretched (impoverished) man (namely, Sulasa) one day"

Çānt 6. 715 svayam vipannasāiribhyāḥ [sīc; gloss, mahiṣyāḥ] puccham tasyārpayat sakah,

"That unhappy (Sulasa) himself handed the tail of a dead shebuffalo to that (tricky conjuror who was plotting against him)"

Çānt. 3 552: so 'vocan mayakā muktam . . . mogham abhūd idam,

"He (Damitārı) said. 'This (discus) has been hurled by unlucky me in vain.'" In a duel between Damitāri and Tripṛṣtha, in which the former is ultimately killed by the latter Mogham and mayakā illustrate each other

Çānt 6 328 bhayenāitasya mayakā vivāho nepsitah khalu,

"Out of fear I, wretched girl, do not at all desire to marry him" Bhayena and mayakā illustrate each other

Çānt 6 1574 param çaçāka no gantum pattibhih suniyantrītah, evam asthāt tatra kālam kiyantam asakāu tathā,

"But he could not escape, because he was carefully kept confined by the soldiers, so that he abode there miserably for some time." The subject is a Pulindra (Pulinda), a forest-dweller who has been taken to his palace by a king out of gratitude for an important service. The Pulindra longs for his native forest, and later makes his escape.

 ζ ānt 6 1410 ekāksah kitavah ka ζ cid atho ratnākarātmajam, ity uvāca sahasreņa dravyasya $mayak\bar{a}$ kila, svanetram tvatpituḥ pār ζ ve muktam grahanake 'sti bhoh,

"A certain one-eyed gambler said to the son of Ratnākara 'I myself, miserable man, deposited my (other) eye as a pledge (for the loan) of a thousand with your father, O good Sir!" Cf Vm Mall 7 726 ff; Hertel, Indische Erzahler, vol. vn, pp. 122 ff

Çānt 6 421 yady evamvidhayā kriyay*āsakāu* samtisthate tato jīvaty anvathā mriyate dhruvam,

"If that *unfortunate* man will engage in such (penitential) practice, then he will live, otherwise he will surely die." Part of a conversion-story

Çānt 3 612 anyedyur dasyunāikenātipracandena māyinā, agrhyenālaksitena musyate sma purī $sak\bar{a}$,

"One day a certam very cruel robber, who being skilled in magic could not be caught because he was not seen, plundered that wretched city"

Çānt 6 344 udbadhya taruçākhāyām ātmānam martum udyatām, imikām aham adiāksam tvadviyogena sundara,

"I beheld this wretched girl who had hanged herself on a tree branch, determined to die on account of separation from you, O noble man!"

Çānt 3 39 iti cintāviṣanņāsyam patim dṛṣṭvā sanarmavāk, uvācāivam punā rājñī tadbhāvāvidurā sakā, "Thus, perceiving that her lord's face was clouded with sad reflection, the queen pleasantly addressed him, not understanding his state of mind, she, poor lady." King, son-less, has discovered a white hair in his head, and is afflicted by vāirāgya, queen, misunderstanding his state, dejectedly gives him advice that is not to the point.

Çānt 6 291 evam uktvāsakāu vāmakaranyastaçirodharā, cintayā vigatotsāhā babhūvādhomukhī ksanāt,

"Thus saying, that unhappy girl, her neck resting upon her left hand, weak from sorrow, for a moment cast her eyes to the ground"

Çānt 3 682 vicikitsām imām krtvā mrtvā cāyuḥksaye sakā, samjātā yatra taditah sthānam samkīrtayāmy aham,

"Having entertained this doubt (about Jaina religion) that unhappy woman died at the expiration of her life's term. What station she was born in, that will I now relate." The woman suffers much in her next existence. $Sak\bar{a}$ may here refer to impiousness, rather than to evil fate.

Vın Mall. 7 370 yakābhyām eva karnābhyām çrutam svaguņavarnanam, re pāradārika iti tābhyām eva hi çuçruve,

"With the very same wretched ears with which he had heard panegyrics of his virtues, with those self-same ears was now heard the cry "O you vile pursuer of other men's wives!""

Vin Mall 1 101 atrāivānaçanam krtvā paralokah sunirmalaḥ, upārjanīyo bhāvena no kāryam mayakāparam,

"Right here I must fast to death and reach by meditation the wholly undefiled other world, my poor self cannot do otherwise" The speaker has been told by a Vidyādhara sage that he has just five days to live, and he is looking for some one to recite for him the "Five-fold Obeisance" (namo 'rhadbhyah etc)

Vın Mall 7 1052 sā tasthāu nyagmukhā bālā rajanyām ıva padminī, uvāca çresthinīm mūlām āvayor duhit*āsakāu* lālanīyā pālanīyā,

"The (princess Vasumatī) stood with her eyes cast down, like a lotus by night—The (merchant Dhanavāha) said to his wife Mūlā—'That poor child must be petted and brought up by us as a daughter"." The merchant has taken the princess from the slave market to adopt her as his child, see the digest of this remarkable story, Bloomfield, JAOS xliu, 265, note 18

Çāl 5. 13 rājasarpah prasarpantam yaham jegilyate . . . bhogilokam,

"The anaconda (double entente, royal serpent, meaning King Crenika) who devours the *miserable* serpent-folk (double entente, his people who are devoted to the senses)." See the author, JAOS. xhii, 277.

Pārç. 2. 409 · tatra yūyam tu no dṛṣṭāḥ pṛṣṭāç ca munayo na tāiḥ, uttaram dattam ity ārtyā prayukto mayakāvadhiḥ,

"I did not see you there, and when I asked the Sages they gave no answer. Then, in distress, I, miserable, employed avadhi insight." Ārtyā and mayakā illustrate each other

Meliorative Uses of the Diminutive Pronoun

Meliorative uses of diminutive pronouns are less common than the pejorative, but not less certain, or effective. For the most part the meliorative function is found at the opposite pole of the pejorative (pious impious), but it produces also shadings of its own. The entire class may be treated under three heads

- 1 Approval of piety or good conduct
- 2 Expression of excellence of social station or character
- 3 Conciliation or cajolery (captatio benevolentiae)

1 Approval of Prety or Good Conduct

The two antithetic examples which reflect in two successive clokas of Çānt. 3 406, 407 yake in the sense of "what impious people," and yake in the sense of "what pious people," are stated in full, above p 10 Other cases in which ka-diminutives imply approval of piety appear in the following

Çānt. 6 754 sādhayantı yake sarvān yogān nirvānasādhakān, . . . tān bhadra sādhūn namaskuru,

"Those *pious* men who acquire all the ascetic practices that secure emancipation (nirvāna) them, my good sir, do you revere!" Here yake and sādhūn illustrate each other

Çānt 3 324 viçuddham pālayitvā tan mrtvāgād amarālayam, tataç eyuteyam samjātā çreṣthins te duhitā sakā,

"Having preserved her virtue, then died, she went to the abode of the immortals Thence the *prous* woman fell and became your daughter O merchant!"

Çānt 4 791 dharmam tadantike çrutvā pratibuddhaḥ sako 'pi hi, rājye çatabalam putram niveçya vratam ādade,

"Having heard the Law expounded by him, that pious king was converted and placed his son Çatabala upon the throne, and also took the vow"

Çānt. 6 1495 cıram bhogaçriyam bhuktvā jātaputraḥ sako 'nyadā, çuçrāva sadguroh pārçve dharmam pravrajītas tatah,

"Having enjoyed for a long time the bliss of the senses, having begotten a son, that pious man listened one day to the teaching of

the Law by a noble Teacher, and then went forth into the life of an ascetic"

Çānt 6. 394 · tarhi tān aham, krīdayiṣyāmi nāgāns tu madīyān krīdaya tvakam,

"Then I shall make these serpents perform, and do you, holy Sir, make mine perform." Nāgadatta is addressing a Muni (tvakam) who has come to convert him The serpents are the four kaṣāyas (sins): anger, pride, guile, and greed

Çānt 6 1621 tasyām çılāyām kālena bahvyaḥ samyatakoṭayaḥ, siddhāç cakrāyudhānhrıbhyām yakā pūrvam pavıtrıtā,

"Upon that holy (yakā) mountain which had been previously sanctified by the feet of (the Sage) Cakrāyudha, as time passed, many crores of ascetics obtained bliss"

2 Expression of Excellence of Social Station or Character

We may introduce this class fitly with a description of the siddhi, or personified "bliss," the state of the soul after it has been freed from the round of existences

Çānt 6. 1553 pinde ca yojanāny asṭāu madhyabhāge sakā punaḥ, jāyate maksikāpatratanvī cānte,

"And the noble (siddhi, emancipated soul) is, as regards her frame, eight yojanas in the extent of her middle, and at her end thin as the wing of a fly " Previously, 6 1550, the question is asked, kīdṛgrūpā siddhir bhavaty asāu, "Of what form is that siddhi?"

The remaining cases are of considerably varied character they deal with noble station, noble character, and heroism

Çānt. 4. 7. kathītās te mahībhartuh . suputrajanmakathanāt tenāpy āhlāditā $sak\bar{a}$,

"(The queen) told her (fourteen dreams) to the king, and that noble lady was gladdened by him by telling her that she should bear a glorious son"

Çānt 6. 8 tasminç ca samaye devī sukhasuptā caturdaça mahāsvapnān dadarça . $sak\bar{a}$,

"And on that occasion the *noble* queen, sleeping blissfully, saw the fourteen great dreams (which herald the birth of a Tirthamkara)"

Çānt. 3 623 svasamīpe samāyāntam nanāma sa mahīpatiḥ, kutaḥ sthānād āgato 'sīty ālalāpa sako 'pi tam,

"That king revered the ascetic who had come to his presence, and courteously asked him whence he had come"

Vin Mall 2 96. atha rājye ' $sak\bar{a}u$ nyasto bhūpo 'bhūt padmaçe-kharaḥ, punyānı sahacārīṇi videçe 'pi mahātmanām,

"Then that noble Padmaçekhara was placed upon the throne, and became king The virtues of noble men accompany them even to a strange land" Padmaçekhara, sleeping under a tree, is selected by the minister Subuddhi as successor to a king who has died without heir.

Çānt 6 1138 tato rājasamādistacetibhih snapitā sakā,

"Then that noble lady was bathed by tire-women appointed by the king"

Vın Mall 5 79 antahpuravadhülokāır muditāih snapitāsakāu,

"That lovely (princess) was bathed by the delighted women-folk of the zenana" Her father, the king, afterwards asks the guardian of the zenana, whether he has ever seen so lovely a girl

Çānt 6 1284 sāpatyāpy amunā $sak\bar{a}$. nītā purāraksasya mandire, and, 6 1285 sā ninye rājamandire,

"That noble woman with her child was taken to the palace of the city guardian," and, later, "She was taken to the king's palace"

Çānt 3 530 āmeti *takayā* prokte tāv abhūtām svarūpināu, dṛstvā jagāda sā cāham yusmadājñākarī khalu,

"When the lovely (princess Kanakaçrī) consented, the two (princes Anantavīrya and Aparājīta) showed themselves in their true form The (princess) seeing them told them that she was entirely at their disposal" The princes have been disguised as nautch-girls; Kanakaçrī is in love with Anantavīrya

Çānt 3 544 (ın alternate readıng in foot-note) tānı çastrāni tasyāçu pratıçastrāır mahābhujāu viphalīcakratus takāu,

"These weapons of him (Damitari) these two great-armed heroic (princes) quickly made futile by means of counter-weapons"

Çānt 3 480 . . . valītā vyantarī sātha yakso 'pī valītah sakah, kṣāmītah krtakrtyena çresthiputrena bhaktītah,

"The Vyantarī (Siren) returned, and so did the kindly Yaksa who had been conciliated by proper performances by the merchant's son (Jinapālita) in devotion" The Yaksa here, as elsewhere in fiction, figures as a benefactor

Çānt 4 697 uttisthottistha he tāta yāty adyāpy asakāu naraḥ, athāsya pṛchato 'darçı tena chāyā çarīrajā,

"Rise, rise, O Father! That good man is going to-day also Then, when (the father) asked, he showed him his own shadow" The father has previously been led by that same son to suspect that a strange man is visiting his wife, see Hertel, Indische Erzahler, vii, 130 ff.

Vın. Mall 5 14 tasyāḥ strīratnamukhyāyā āyurgranthāu mahīpate, vidhīyate sako 'py uccāir niḥsīmaḥ puspamudgaraḥ =

Hem. Mall, stanza 62. tasyāḥ strīratnamukhyāyā āyurgranthāu vidhīyate, sa puṣpamudgaraḥ ko 'pi yādṛk svarge 'py asambhavī.

The glossografer to Hem. glosses puṣpamudgaraḥ by puṣpagucham, and āyurgranthāu by āyuhsūcikāyām granthirūparekhāyām.

The passage from Vin. Mall. may be rendered, "In the life's knot of this foremost jewel among women, O king, that wonderful, grand bouquet of flowers is clearly formed." Hem. adds that such a bouquet does not exist even in paradise The minister Subuddhi says this to King Pratibuddhi partly in praise of the maiden Malli, the future Tirthamkara Mallinātha saka and nihsīma illustrate each other

3. Conciliation or Cajolery (captatio benevolentiae)

The cases are few, but their special shading quite obvious

Çānt 3 182 punaḥ sā bhaṇitākkayā sarvathā sevanīyo 'yaṁ he putri tvayakā naraḥ,

"Again the bawd (akkā = kuṭtanī or kuttınī) told her (the hetaera Vasantatılakā) 'By every means that man (Mıtrānanda) must be cultivated by you, my good girl'"

Çānt 3. 189 mitrānando 'vadat tarhi tadagre kathaya *tvakam*, bhadre gunotkaraḥ . yasya çrutas tvayā,

"Do you, my good girl, relate to her (the princess Ratnamañjarī) the many virtues which you have heard about him (Amaradatta) "Mitrānanda is trying to bring together his friend Amaradatta and the princess Ratnamañjarī, the object of Amaradatta's desire

Çānt 6. 1405 idam asya hi mūlyam yad vastubhis tvayakoditāih, yānam te pūrayisyāmo gachato nagaram nijam,

"This indeed is the price (we shall pay for your ship's load), namely, we shall fill your ship with goods designated by your good self" See Hertel, Indische Erzahler, vii, 121.

RARE INSTANCES IN THE CLASSICAL LANGUAGE

The Western Lexicons quote or cite diminutive pronouns practically only from the Veda, on the one hand, or the Hindu Grammarians on the other hand I presume it is Leumann that has contributed a number of such words to the Lexx from the late Jinistic Bhadrabāhu Carita, which is not at hand ahakam, 1 109, which does not appear in my collection, but is known to the Grammarians, below; mayakā, 2 49, tvakam, 1 64; tvayakā, 4 9, and case-forms from stem taka, 4 22, 151 The form Prākrit tayam, = Sanskrit takat, occurs in the Māhārāṣṭrī tale of Agaḍadatta, Jacobi, Ausgewahlte Erzahlungen, p 85, line 37 (stanza 320), in the sense of "this damnable (act)." J. Meyer,

Hindu Tales, p. 286, note 1, quotes another case of tayam from the Kālācārya Kathānakam. Both texts are Jinistic. Judging from my own experience as well as from the Lexicons, the Classical language shows them so rarely, as to render them well-nigh negligible for the entire period that hes between the Veda and the writings of Hemacandra. Bo., in the smaller Pet. Lex, Nachtrage (vii, p. 314), quotes asakāu from Çıçupālavadha 7. 53, Sāhıtya Darpaṇa 49

DIMINUTIVE PRONOUNS IN THE HINDU GRAMMARS

The Hindu grammarians treat familiarly a quite remarkable assortment of diminutive pronouns, some of which coincide in form and use with those listed above from the Jaina texts. They range over all the personal and demonstrative stems and some of the pronominal adjectives. Pānim's general treatment of the diminutive suffix ka is at V, 3, 71 ff. first person singular ahakam and the stem-forms makatand matka- in makat-pitrka or matka-pitrka, see Patañjah, Mahā-bhāsya I, 1, 6 (p. 97 of Kielhorn's edition) on Pān I, 1, 39. The instrumental sg. mayakā, very frequent in the Jaina texts, and the solitary instrumental dual āvakābhyām (p. 16) are not referred to, but Bo Nachtrage 5, quotes ahakam from Bhadrabāhu Carita I, 109.

Second person singular tvakam and the stem forms tvakat- and tvatka-, in tvakat-pitrka, matka-pitrka, $Mah\bar{a}bh\bar{a}sya$, loc cit. The stem saka figures, along with esaka, at $P\bar{a}n$ VI, 1, 132 schol, where the statement is made that their nominatives are sako and esako in external eufonic combinations, in which the non-diminutive forms appear as sa and esa. This is borne out unfailingly, as far as sako is concerned, by the Jaina texts. Note that the femilines $sak\bar{a}$ and $yak\bar{a}$ are the only exceptions to the rule that the femiline secondary (tad-dhita) suffix $k\bar{a}$ does not change the a-stem of a noun combined with it to 1 $(ik\bar{a})$, $P\bar{a}n$ VII, 3, 45, Vop. 4, 6. This is borne out negatively by the pair imaka, but $imik\bar{a}$ in the Jaina texts above

From the stems esa, eta, the Petersburg Lexicon, at the end of its article etad, and Bohtlingk's Lexicon under etaka and esaka, cite the unquotable feminines esakā and esikā, etakā and etikā with reference to Pānini VII, 3, 47, and his commentators. No diminutive forms from esa, eta have thus far come to light in Jama Sanskrit

Pānini VII, 1, 11, 2, 112 and his commentators and successors permit the steni imaka (also amuka) to form all cases except the nominative ayakam. The forms mentioned are, imakena, imakayoh, and imakāih. He does not refer to the fem imikā, which is, however, implied in sūtra VII, 3, 45. Forms from masc imaka and fem imikā are

fairly frequent in the texts above. The instrumental plural *imakāiḥ* is, however, to be appraised as the direct diminutive of the Prākritic form *imāih*, which is peculiarly frequent in Jaina Sanskrit Par. 8, 520; Pārç. 1, 885; 6, 767; 7, 398; Samar. 4, 508, 619; 6, 385; 8, 520; Çānt. 6, 411

The nominative asakāu, very frequent in the Jaina texts, appears in the vārttikā to Pān VII, 2, 107, but amukāih, which appears in the company of imakāih in Pān VII, 1, 11, schol, has so far not turned up in my texts.

The various derivatives in the Jama texts from stem yaka are supported not only by Vedic instances, but also by Pān VII, 3, 45 (with saka), Vop 4, 6

Of stem anyaka (Vedic and Jama, above) the grammarians take no note, but the masculine plural sarvake (with viçvake), Pān V, 3, 71 (schol), and the fem sarvikā in the comments to Pān VI, 3, 35, VII, 3, 44, Vop 4, 6, are supported by the diminutive sarvakam, Av. I, 3, 6.

Max Muller, Sanskrit Grammar for Beginners (London, 1870), p 131, section 274, referring to Pān V, 3, 71, and Siddhānta Kāumudī, vol. I, p 706, groups together, as denoting contempt or dubious relation the forms tvayakā, yuvakayoh, asmakābhih, ayakam, and asakāu

It is possible that some of these grammatical forms, as well as some of the Jaina forms, are retrograde Sanskrit forms, based upon Prākrit models. Prākrit forms of aham, such as ahaam, hage, hagge (hake, ahake), listed by Pischel, Grammatik der Prākrit-Sprachen, section 415, presuppose ahakam, but this form is too solitary to be the basis of the entire movement. There goes with it no indication of diminutive function. Quite beguiling is the form imia = *imika in Hemacandra (Siddhahemacandram) 3, 73, but this ka-form from stem ima is also too isolated to permit correlation with the free imaka formations of the Jaina texts and Pānini's full set of case-forms.

Conclusion

Professor Franklin Edgerton, in his excellent Johns Hopkins doctor's dissertation, "The K-Suffixes of Indo-Iranian," JAOS. XXXI, 93 ff, has treated exhaustively the diminutive uses of this suffix in the Veda (pp 125 ff) including, very observantly, the diminutive pronouns He has, however, for various reasons, not extended his researches to Classical Sanskrit From the negative evidence of the Lexicons and western grammars the occurrences of diminutive pronouns in the Classical speech must be, at best, exceedingly rare. Between the far-off Veda and the Jaina texts lies the native grammar,

which treats, as we have seen, the diminutive pronoun as a familiar fact without any indication that it is practically restricted to the Veda (chandasi). What, then, is the basis of the Jainistic usage?

There seems but one answer likely The Jaina writers have restored the diminutive pronoun to literature. In my paper, "Some Aspects of Jaina Sanskrit," Festschrift Jacob Wackernagel, pp. 226 ff., I have shown that Jaina writers make copious use of the Vyākarana and Koça literature. I repeat a remark made there, namely, that words which occur in Jaina texts and, besides, only in Lexicons and Grammars, are no more "quotable" than the grammatical forms of the Bhaṭtikāvya. As an additional illustration, I may mention the common Jaina use of the pronominal adjectives in kīna, māmakīna, tāvakīna, āsmākīna and yāusmākīna. They are treated in Pān IV,3,1-3, but there are only a very few forms of that kind quotable, beginning with the somewhat different mākīna, Rv VIII, 27, 8. On the other hand, a small group of Jaina texts yield the following

māmakīna Vin Mall. 7, 560, Çānt 1, 287, 2, 299, 4, 298, 6, 1465. tāvakīna Vin Mall 7, 124, Çānt 2, 312, 6, 1154, 1404 āsmākīna Vin Mall 7, 677

yāusmākīna Par 1, 153, Vin Mall 7, 34, 917, Çāl 6, 25

The Jamas use these words familiarly, not because they know them from literature, their recrudescence is due to the Jamas' large control of grammatical and lexical science. In the future study of the native $vy\bar{a}karana$ and $ko\varsigma a$ literature, the Jama texts will take a large, almost controlling part, because they have revived much that is lost in Classical literature.

¹ Indeed, Jama scholarship to this day keeps its grip on these subjects as stoutly as did the great Hemacandra—Of recent missives from India, through the kindness of their Pontiff, Jamacharya Shri Vijava Indra Suri, I may mention a beautiful edition (with word-index) of Hemacandra's Abhidhānacintāmani, elaborated by those two wonderfully productive, scholarly Pandits, Shravak Pandit Hargovindas and Shravak Pandit Bechardas, published as no 41 of the Yashovijaya Jama Granthamala, Bhavnagar, Veer Era 2441 (A D 1915), and the Dharmadīpikā by Nyaya Visharad Nyaya Tirtha Upadhyaya Mangal Vijayaji, Bhavnagar, Vīrasamvat 2451 (A D 1925)

JOHNS HOPKINS UNIVERSITY

NOTES ON JAINA MĀHĀRĀŞŢRĪ

By FRANKLIN EDGERTON

In the course of a number of years of class-work on Jacobi's Ausgewahlte Erzahlungen in Māhārāstrī, I have collected the following notes on matters mainly of etymology or interpretation, which now seem sufficiently numerous to justify publication for the benefit of other users of that admirable and useful manual, and of students of Prākrit in general. Except in a few cases where the contrary is specifically indicated, they all concern matters which seem to me insufficiently or incorrectly explained both in Jacobi, and in J J Meyer's English translation entitled Hindu Tales I refer to Jacobi by the initial J.

1. "Vedisms" in Māhārāstrī

khambha "pıllar" = Vedic skambha (J. stambha) \checkmark junna "old" = Vedic (RV.) jūrna (Skt. jīrna). The u-forms of this root are distinctly Vedic

thāma "station" = Vedic sthāman (in Skt the word means "power")

vasıma "dwelling" = Vedic vasman.

Cf also tayam below, under 2

2 Semantic and Etymological Notes

 $ahvy\bar{a}scv = adhvr\bar{a}sayatv, \text{ "cause (divine power) to dwell in (an image), invest" (see Edgerton, JAOS 33 158 ff.) J. adhyāsayatv, "ertragen"$

 $\bar{a}bhoe\bar{u}na$ "having experienced," from $\bar{a}+bhuj$ "enjoy" and so "experience"

ucchaliya "sich erheben" = Skt uc-chal (root sal) J utthal.

uvvaddha-pindio = Skt udbaddha-pindika "with stout, swollen calves", the identical Sanskrit compound occurs, Tantrākhyāyika p 64, line 7. J udvrddha-"kraftig", Meyer has the correct etymology but does not note the actual occurrence of the word in Sanskrit, which determines the meaning precisely and indubitably.

kammaṇa 56 31 = karman, "medical treatment", so in Caraka. See below under $m\bar{u}li$

karana 37 5 "Gericht"; in this sense I think the word is a back-formation from kāranika (Pkt kāraniya) "judge," which is in actual fact a derivative from Skt. kārana, "cause," and not from karana.

khāmei 25 15, causative of kṣam, means "say good-by," literally "excuse oneself"; cf Russian prostit's'a, literally "excuse oneself," the regular Russian expression for "say good-by."

gosa "morning" is derived from go and a derivative of the root si (RV. sāyá "unloosing" etc.), and equals Skt. go-visarga, literally "time of letting the cows loose"

cojja = Skt āścarya, I would explain the phonetic development thus āścarya > accejja > (ac)cojja by dissimilation of e to o before jj. (J gives the correct etymology, of course, but does not call attention to the interesting case of dissimilation)

tayam = takat, 85 37 Meyer notes the etymology but fails to observe the clearly deprecatory or imprecatory use of the suffix -ka, which may almost be called a Vedism The use of the "diminutive" -ka, particularly in pejorative senses, with pronominal stems, is especially characteristic of some phases of Vedic diction See Edgerton, The K-Suffixes of Indo-Iranian, p 45 f

tavovahāna 61 17 "excellent asceticism"; J translates "Askese" and does not analyze the word The second member is clearly upadhāna = višesa, "excellence"

niyanta "sehend, beobachtend" (not explained in J) is simply a pres ppl to the root $n\bar{\imath}$, with meaning influenced by netra, nayana, "eye", because of these familiar derivatives, the root $n\bar{\imath}$ is felt as meaning "to see"

nirūvei with saranam, 63 20, = "meditate on your (religious) refuge," "call on your sectarian deity," that is "prepare to die." See now Edgerton, "The Hour of Death, its importance for man's future fate, in Hindu and western religions," Annals of the Bhandarkar Institute, 8 219-249, csp. p 224

payar 26 5 = Skt prakrtı, "mınıster" or "power" of a king (a technical Arthaśāstra term), J derives from padātı.

paraddha 7 35 = pralabdha, "seized" (with regret, pacchāyāva-); J "gequalt" (DK pīdīta); Meyer "seized," no doubt understanding the word as I do, but without statement of ctyniology

pularya, H. pulaer = drś, is an interesting case of vowel-metathesis; it is evidently Skt pralokayati (Pischel §§ 104 and 130) with metathesis of the vowels of the first two syllables.

bhandana "Streit" 13 28 = Pāli bhandana and Buddhistic Skt. $bh\bar{a}ndana$.

 $manahara-k\bar{a}la$ 78 25 (metr gr for $mano^{\circ}$) = "night" ("pleasant time")

māri 35 24 = "pestilence" (Skt māra and lex. māri). J. "Morder."

mūli 56.31 = Skt mūlin, "root-doctor." The sentence ālavanam pi hu cheyāna kammanam kim ca mūlīhim means "the conversation of the clever, I tell you, is true physicking (see kammana above), and what is the use of root-doctors?" J renders mūli by "reich"

lajjhai on this passive to labh see now Tedesco, JAOS 43.368.

lambei = Skt lambayati "hang up, post," 1821, 24 J "verbreiten", Meyer "supply," which is bad, but Meyer in a footnote suggests as an alternative the interpretation which I give

vaccar "gehen, wandern" seems to me clearly Skt. vrtyate, passive to root vrt

vaccha-tthala = Skt °sthala, "place" J °tala

saccaviya 13 32, 15 19, 27 32, "seen," is not explained etymologically by Jacobi, who separates it from the other saccaviya, the p p p. of satyāpayati, "bewahrheiten." But it is obviously the same word as this, for the development of meaning of German wahrnehmen

sulasā, n pr, is not explained by J; of course it is Skt Sudršā.

 $s\bar{u}ra = \text{Skt } \dot{s}\bar{u}ra$ seems to me used at 56 2 as an abstract, "heroism", Skt $\dot{s}\bar{u}ra$ is so used in Ind Spr 5756

hakkar 16 22, 75 23 is given by J as meaning "hindern, abwehren," quoting Hein 4 134 nisedhati But Hem's definition is inexact, or rather, free, the word is based on the onomatopoetic hakka, a call used in stopping an elephant 16 22 hakkio kumārena karī Originally "to call 'whoa!" it comes to mean "to call, yell at" in general, so in 75 23 a thief is the object of the shouting (Meyer here renders "call," though at 16 22 he follows Jacobi, "warded him off") See the next

hakkārai has the same meaning as the preceding, and a like derivation; it contains of course the element -kāra (as in humkāra etc.) Perhaps contraction or haplology has taken place in it (from hakkakāra, cf. andhāriyam, 22.3, = andhayāriyam, Skt andhakāritam), but more likely the original exclamation was simply hak! In Sanskrit hak-kāra is quoted lexically. In 71 33 this word is used of an elephant (hakkārio gaindo), but it also, like hakkai, is used by extension of human beings (63.19 and 33, 72 20). The word has, of course, nothing to with ākārayati (J.)

3 Omissions in Jacobi's Glossary

Most of these are perfectly simple and obvious words, their omission being clearly due to mere accident. In some cases Meyer has noted the omission. Some of them, however, appear to be due to errors of interpretation.

 $\bar{a}n\bar{a} = \text{Skt } \bar{a}j\tilde{n}\bar{a}, \text{"command," 63 6}$

kalaha = Skt kalabha, "elephant" (Meyer), 81 34.

kalla, kallam, "morgrig, morgen," 50.20, 60 29 (Meyer). J. only "gestrig, gestern."

carana, "good conduct, morality," 3 15 (tatsama).

calana, "foot," 23 25 (tadbhava)

cetthar, 59 22, 27, probably = citthar, Skt tisthati (rather than root cest-); so clearly at 59 27 where it is resumed by the participle thio in the next line

taniya 86 18, acc to Meyer = taniyas, compv to tanu.

panta = Skt. prānta, "last, extreme," 33 29

parara = prarara, by a slip labelled "ts" (tatsama) in J.

pāgaya = Skt prākrta, "commonplace," 2 28

manunna = Skt manojña, "charming," 4 16 (Meyer)

vajjai = Skt vādyate, "is made to sound," 40 21

 $vibh\bar{a}s\bar{a}$ 65.8 acc to Meyer ts , but perhaps rather $vibh\bar{a}s\bar{a}^{g}$ Uncertain

 $s\bar{a}manna$ 13 25 "gewohnlich" is placed by a slip under $s\bar{a}manna=$ Skt $\pm r\bar{a}manya$

suhi = Skt. suhrd, "friend," 84 7 (where **J** wrongly emends to sahi) and 82 36 (where he interprets it as = sukhin) Meyer has the correct interpretation in both places

4 A few Emendations

At 39 14 read perhaps $s\bar{u}l\bar{a}hi$ (with v l) "on spits," for $m\bar{u}l\bar{a}hi$ At 39 16 read $uvav\bar{a}iyam$ (with v l, = Skt $upap\bar{a}ditam$) for $uv\bar{a}iyam$

At 37 27 read probably janaya-kkhao = Skt janaka-ksaya, "parricide," instead of jana°, supposed to mean "people-slayer, murderer" (but the use of the word jana in such a connexion seems curious) Karakandu at this point was about to attack his own father, though he did not know it. It is a version of the Hildebrand motif. The speaker wishes to avert the horror of (unwitting) parricide

YALE UNIVERSITY

MISCELLANEA PĀLICA

By DINES ANDERSEN

1. KANTA

The following verse is found Ja VI, 370 containing a riddle.

Hantı hatthehi pādehi mukhañ ca parisumbhati sa ve, rāja, piyo hoti kan tena-m-abhipassasi?

Fausboll's edition has two misprints in this passage $r\tilde{a}j\tilde{a}$ for $r\tilde{a}ja$, and abhipassati for abhipassasi (cf. pp. 376, 15, 377, 4, 378, 9-28). The English translation of Cowell and Rouse renders the last two sentences everywhere with the words "he is dear, and grows dearer than a husband", and at the same time adopts the reading kantena, instr of kanta, m "a husband" It is not easy to see how the translator understood abhi passati, but the translation is probably taken from the words of the Commentary p 376, 25 iti so tassā evarūpe kāle piyataro hoti, tathā pituno But it is to be observed that pituno may be genitive, parallel with the preceding tassā (genitive feminine), hence "dearer to her, as also to his father " This translation is made necessary by tathā, which renders the two members parallel tassā and pituno — kanta (maseuline, feminine, neuter) = "lovely, eharming," is never found in Pāli as a masculine noun (= a husband), and the emendation kantena for kan tena must be rejected, all the more as kam tena abhi passasi gives exactly the right meaning Passati = videre, but abhipassati = intelligere, mente percipere, explicare, interpretari, etc., therefore we must translate what do you understand by that? (quid illud interpretari putas?) (Answer the child in his mother's lap)

2 NANTE

In connection with the above it is interesting to look at kante, Ja V, 486, 13 (= santike, Coinni) which the English translator of Ja V (Francis) fairly correctly renders "at man-eater's hand [I] go forth to die" (= gacchām' aham porisādassa kante, v 1 ñatte) PTS's Dictionary, which has also adopted the emendation kantena, Ja VI, 370, proposes here a very astonishing conjecture porisādassak' ante ('!). But the correct reading is evident v 1 ñatte is simply to be read ñante, just as the parallel passage Ja V, 26, a shows; ñante is Sanskrit nyante, ind. = near to = santike. Abh 706 has by mistake ñattam instead of ñantam (also Childers).

3. Issa (Īsa)-phandanā

Jātaka No. 475 (IV, 207) contains the story of a wild animal (kālasīha) and a Phandana-tree (spandana) In the Gāthā's this animal was called īsa, m. (cf Abh 612 1ssa, "a bear, a sort of lion," sa rçya, rsya) There is doubtless an allusion to this fable in Dhp-a I, 50, 13: issa-phandanānam viya, kākôlūkānam viya, which is rendered by Burlingame, Bu Leg I, 174, as follows "like the Snake and the Mongoos, who trembled and quaked with enmity, like Crows and the Owls" (with a reference only to Pañcatantra V). It appears clearly from the parallelism between the two expressions that the translation should be. "like [the enmity of] the Bear and the Phandana-tree [or] like [that of] the Crows and the Owls" The translation of issa-phandana (PTS's Dictionary s v. phandana) is therefore inadequate, the translation of Rouse (Ja V, 131), on the other hand, is correct.

The following stanza is found Ja I, 464

4 Vyāharati

Yathā vācā va bhuñjassu yathā bhuttañ ca vyāhara, ubhayam te na sameti vācā bhuttañ ca, Kosiye!

The English translation renders this as follows "You may act or eat, which shall it be? for you can't both, my Kosiya," the German translation has "So wie du sprichst, so iss jetzt auch, und wie dein Mahl 1st, handle auch, denn beides nicht zusammen passt, die Rede, Kosiyā, und das Mahl" — Both translations miss the verb vyāharati, which, on the basis of Comm's periphrastic explanation gehe kattabbakammam karohi, is rendered in the German translation with "handeln" (arbeiten) But this meaning of vyāharati cannot be found anywhere in Pālı literature It always means "to say, tell, speak, pronounce," a confusion with voharati (vy-avaharati), in the original meaning of this verb, is hardly possible On the other hand, voharati, through vohāra (which is both = $vy\bar{a}h\bar{a}ra$ and $vyavah\bar{a}ra$, and means among other things "usage" (as to language) but not "pronunciation" has also acquired the meaning of vyāharati, but we never find the reverse development Vyāharati therefore means "to say," — but not "arbeiten," and that fits the thought of the stanza perfectly the Brahman woman's talk about her bad stomach is in contradiction to her over-indulgence in sweets (yā ca te ayam vācā 'vātā mam vijihantî' ti yañ ca te idam paņītabhojanam bhuttam, idam ubhayam pi tuyham na sameti), therefore the words vācā and vyāhara are in the same relation as bhuttam and bhuñjassu.

Either eat, as you speak, or speak, as you eat! Both do not go together: your complaints and your way of eating, my girl.

5. ΑΡΑΚΑΤΑÑΥ (Α[Ρ]ΡΑΚΑΤÑΥ)

The Pāli word a-katañu (ungrateful) is lacking in PTS's Dictionary, but — to this Helmer Smith has called my attention — through a curious misunderstanding it is inserted as a-pakatañu (p 50) = "ungrateful" (Vin II, 199,9) This form is just as chimerical as "un-prograteful" ['] It is of course to be understood as a-pakatañu (sa aprakrta-jña) = "who does not know the matter in question" Also the translation in SBE XX, 256 "ignorant of what he had in hand" is somewhat obscure. Trenckner quotes in addition Vin IV, 112, 7 bhagavatā sikkhāpadam apañāattam, te vā bhikkhū appakatañuno, Dhp-a I, 143, 2 Vajjiputtakehi navakehi appakatañūhi (novices having little gratitude" ['], Burlingame's translation), Vin I, 312 22 gocare appakatañuno (opp. pakatañuno, concerning newly-arrived monks), Ps. II, 430, 13 vinaye appakatañuno.

University of Copenhagen

L'INSCRIPTION DE MAHĀNĀMAN À BODH-GAYA

ESSAI D'EXÉGÈSE APPLIQUÉE À L'ÉPIGRAPHIE BOUDDHIQUE

PAR SYLVAIN LÉVI

T'AI déjà eu l'oceasion, il y a vingt-einq ans, d'appeler l'attention sur une inscription de Bodh-Gaya qui avait été publiée par J. F. Fleet en 1886 dans l'Indian Antiquary, et de nouveau éditée par lui dans le beau recueil des Gupta Inscriptions en 1888 (No 71). Cette inscription commémore, en vers sanscrits d'une faeture savante, la fondation d'une chapelle du Bouddha, dans le voisinage du Bodhimanda, par un moine nommé Mahānāman, originaire de Lankādvīpa; Mahānāman y expose sa généalogie spirituelle en remontant de proche en proche, par Upasena, Mahānāman, Upasena, Rāhula, jusqu'à Bhava La date, exprimée en symboles numériques, est l'an 269 d'une ère qui n'est pas autrement précisée L'éditeur de l'inscription, Flect, après avoir interprété cette date en prenant pour point de départ l'ère Gupta 318/319 (269 = 588/589 A D) a finalcment hésité entre ectte ère et l'ère Kalacuri de Cedi 249 a d (269 = 539/540 a d) pouvoir contester ces deux interprétations, et je proposai de ramener la date donnée à l'ère saka 78/79 (269 = 348/349 A D)

J'avais en effet découvert, dans une compilation chinoise du VIIe siècle, un fragment de la Relation du voyageur chinois Wang Hiuants'e qui visita l'Inde plusieurs fois au milieu du VIIc siècle, ce fragment raconte comment, au temps du roi Samudragupta, deux moincs de Ceylan envoyés par le roi Śrī Meghavarna avaient accompli le pélermage de Mahābodhi, l'un des momes s'appelait Mo-ho-nan, traduit en chinois "Grand nom", l'autre Ou-po, traduit en chinois par "enseignement, prophétie" Le premier porte done le même nom que le moine de l'inscription datée 269, le second, Upa, peut-être sous une forme normalement réduite, un Upasena Il est tentant de supposer que le Mahānāman de l'inscription, disciple d'un Upasena, et disciple à la seconde génération d'un autre Upasena, est identique au Mahānāman qui vint en eompagnie d'un Upa-, de Ceylan à Mahabodhi sous le règne de Samudragupta Vincent Smith, dans un article de l'Indian Antiquary (The Inscriptions of Mahānāman at Bodh-Gaya, April 1902, pp. 192-197), s'éleva contre l'hypothèse que je proposais, il lui opposait des raisons chronologiques et des raisons épigraphiques. Samudragupta était bien sur le trône en 269 śaka = 348/9 a d., mais Meghavarna était mort depuis quinze ans, si on admet la chronologie singhalaise. Sur ce point, Vincent Smith s'est plus tard rectifié luimême dans une note de son Early History of India, 3° édition, p. 288, il assigne au règne de Meghavarna les dates 352-379 Après avoir péché par excès, l'hypothèse pécherait en ce cas par insuffisance. Je n'insisterai pas, et je m'arrêterai plutôt aux raisons paléographiques, qui sont graves L'aspect des caractères employés dans l'inscription de Mahānāman suggère une date plus basse que le IV siècle

Je ne reprendrai pas ici une discussion vouée d'avance à la stérilité, faute d'un fait nouveau. Mais je voudrais, en m'aidant des progrès accomplis dans la connaissance du bouddhisme depuis quarante ans, revenir sur certains détails de la traduction donnée par Fleet, signaler des questions qui ont dû lui échapper, et proposer à la critique des solutions nouvelles

L'inscription débute, comme il convient, par une stance en l'honneur du Bouddha

ryāpto yenāprameyah sakalaśaśırucā sarvatah satvadhātuh ksunnāh pāsandayodhās sugatrpatharudhas tarkaśastrābhryuktāh sampūrnno dharmakośah prakrtīrīpuhrtah sādhīto lokabhūtyai śāstuh śākyaikavandhor jjayati cirataram tad yaśassāratanttram

Fleet traduit. "Victorious for a very long time is that doctrine, replete with fame, of the Teacher, the chief kinsman of the Śākyas, by which, lustrous as the full-moon, the inscrutable primary substance of existence has been pervaded in all directions, by which the warriors, who are heretics, obstructive of the path of beatitude, have been broken to pieces, being assailed with the weapon of logic, (and) by which the whole treasure of religion, that had been stolen by the enemy which is original nature, has been recovered for the welfare of mankind!"

La traduction est irréprochable, à ne considérer que les mots, mais le sens suggéré (dhvan) est l'âme de la poésie indienne, et nous sommes ici en présence d'une composition poétique, où le versificateur manie avec une élégante aisance les complications du mètre sraydharā Dans une stance bien faite, la suggestion se précise par des touches successives, et le dernier mot doit à la fois porter l'ensemble et en fournir la clef Le poète a manifestement choisi à dessein pour cette place le mot tantra, qui est particulièrement riche en évocations. Le Dictionnaire de Pétersbourg n'énumère pas moins de 18 significations (sans y faire entrer en ligne le féminin tantrī). Au sens propre, c'est l'instrument à

tisser: le métier ou l'ensouple, ou la chaîne: il en dérive des sens secondaires dont les principaux sont, selon l'interprétation des lexicographes sanscrits svarāstracintā "les préoccupations de la royauté," kutumbak rtya "les affaires de famille," pradhāna ou mukhya "principal, essentiel," paracchanda "dépendant," ıtıkartavyatā "règle à suivre," siddhānta "doctrine, école," śāstra "traité technique," śāstrabheda, śrutiśākhāntara "traité spécial, branche particulière de la tradition sacrée"; dans ce sens, le mot a pris une valeur très précise, il s'applique à une catégorie extraordinairement abondante d'ouvrages où la mystique et la magie se combinent et qui a fleuri dans la bouddhisme non moins que dans le brahmanisme Fleet a, parmi toutes ces significations, légitimement choisi celle de "doctrine", mais il faut observer pourtant que tantra ainsi entendu implique par un lien intime le "traité," le "livre" où la doctrine est énoncée Justement le mot dharmakośa, à la troisième ligne, semble préparer par anticipation un double sens de ce genre. Fleet l'a traduit par "treasure of religion," et c'était son droit, l'expression a ce sens par exemple dans Manu I, 99:

> brāhmano jāyamāno hi pṛthiryām adhi jāyate īśvarah sarvabhūtānām dharmakośasya guptaye

Mais dans le domaine du bouddhisme, le mot ne peut manquer d'évoquer le titre d'un ouvrage célèbre, admis comme une autorité canonique par toutes les écoles, l'Abhidharmakośa de Vasubandhu. Que les deux termes puissent alterner, je n'en veux pour preuve que ce seul fait j'ai eu la chance de découvrir à Katmandou, lors de mon séjour en 1922, un manuscrit incomplet des Kārikā de l'Abhidharmakośa (du I au IV kośasthana), le feuillet initial portait l'indication: Dharmakośa, et sur la foi de ce titre, le Pandit Siddhiharsa, détenteur de ce manuscrit qu'il n'avait jamais lu, s'était imaginé que l'ouvrage était un vocabulaire des termes techniques du bouddhisme, à la façon du Dharmasamgraha Mais l'auteur de l'Abhidharmakośa, dans la vrtti qu'il a lui-même écrite pour expliquer les kārikā, interprète ce mot ainsi. "L'ouvrage s'appelle Abhidharmakośa, parce que l'Abhidharma y est, quant au sens, introduit pour l'essentiel; ou bien parce que l'Abhidharma en est le contenant" idam tu śāstram katham Abhidharmakośam iti tasyārthato 'sminn iti yathāpradhānam antarbhūtah atha vā etasyāśrayabhūtah 1 Le commentateur Yaśomitra 2 glose en ces termes: "Le démonstratif (tasya) désigne le traité technique qui porte le nom d'Abhidharma, et qui va être énoncé immédiatement, quant

¹ Abhidharmakosavyākhyā, ed de la Bibliotheca Buddhica, I, 10.

² Ibid. ad locum.

au sens (arthatah), non point quant à la lettre; le sens y est incorporé, mais non pas la totalité, c'est cequ'il indique par l'expression "pour l'essentiel" (yathā pradhā nam), il est incorporé (antarbhūta), introduit. C'est pourquoi ce traité que je compose tient heu de kośa au sens, est comme un kośa pour lui; dans cc cas, le mot est un composé du type tatpurusa fondé sur un rapport de génitif Abhidharmakośa veut dire alors le kośa de l'Abhidharma Le kośa (le fourreau) dans lequel entre l'épée est le kosa de celle-ci Ou bien encore l'Abhidharma, c'est à dire le Jñānaprasthāna et autres textes analogues, est le contenant de ce traité que je compose De cet Abhidharma canonique, mon traité en a été tiré, quant au sens, comme il a été dit plus haut. En ce cas, Abhidharmakośa est un composé du type bahuvrīhi qui s'explique ainsi L'Abhidharma est le kośa de ce (livre-) ci; cc d'où on tire l'épée est le kosa de celle-ci, mon livre a pour kosa (fourreau) l'Abhidharma Il indique par là qu'il a rendu intelligible le sens général de eet (Abhidharma) "Nous voilà bien loin du sens vague et flou dont Fleet avait dû se contenter "trésor de la religion", nous avons affaire à un livre connu, célèbre, considéré comme l'exposé classique de la doctrine bouddhique au point de vue philosophique Trouveronsnous dans le contexte de nouvelles suggestions qui confirment celle-ci? L'auteur de l'Abhidharmakośa est Vasubandhu, ce nom est généralement rendu en chinois par 世 美見 "apparenté (par alliance) au monde," quelquefois aussi par 天葉 "apparenté (par alliance) à (des) dieu(x) " En tibétain, il est rendu par dbyig gñen "apparenté au(x) trésor(s)", dbyig, qui rend ici le sanserit vasu, a aussi le sens de sāra, hīranya, raīra d'après les dictionnaires tibétains sanscrits. L'élément bandhu paraît à la quatrième ligne de l'inscription, dans le mot Sākyaikabandhoh qui v est employé pour désigner le Bouddha moins qu'on puisse dire de cette appellation, c'est qu'elle est étrange Le Bouddha reçoit fréquemment, même dans les textes canoniques, l'épithète d'Adityabandhu, en pali Adicca° "apparenté au Soleil," quelle que soit l'interprétation qu'on soit tenté de donner à cette appellation chargée d'un long passé de mythologie Mais je ne me rappelle pas d'exemple de Sākyabandhu, et je ne puis me défendre d'une impression de surprise á rencontrer ce mot Le Bouddha est bien le Sākya par excellence, le sage des Śākya (Śomuni), le hon des Sakya (Śosimha), le taureau des Sākva (Śpumgava), tous ces termes lui assignent une place d'honneur dans le clan. Mais à le désigner comme "le parent, le parent unique des Sākya," il me semble que les valeurs se renversent, comme si l'honneur lui venait d'être apparenté à ce clan. Je suis donc amené à croire que le poète a introduit cette périphrase parce qu'il avait dans l'esprit un autre nom où figurait l'élément bandhu. Le terme loka, dans le composé lokabhūtyai qui précède, évoque la traduction consacrée en chinois du nom de Vasubandhu. "apparenté au monde." Et c'est encore une autre des valeurs usuelles de vasu que suggère le mot sāra accolé à tantra, sāra correspond au tibétain dbyig "objet de valeur" qui rend le mot vasu dans le nom de Vasubandhu. En outre il évoque tout naturellement, comme son voisin tantra, une idée d'ordre litteraire. Sāra est le correspondant indien de la "somme" médiévale que Littré définit "Titre de certains livres qui traitent en abrêgé de toutes les parties d'une science", ct nous avons vu que l'auteur de l'Abhidharmakośa pour justifier ce titre allègue que son ouvrage est un abrégé de l'ensemble de l'Abhidharma

Dans l'hypothèse que je propose, les autres traits viennent se coordonner sans effort autour de l'équivoque centrale. Le Bouddha, "lumineux comme la lune en son plein, a pénétré de toutes parts le monde des créatures qu'on ne peut mesurer" L'Abhidharmakośa qui donne une description physique et psychologique de tous les êtres (sattva) dans tous les mondes (dhātu) a droit au même éloge Bouddha "a écrasé les soldats de l'hérésie qui barraient le passage à la Bonne Destination, en les assaillant avec les armes du raisonnement " L'éloge, ici, convient parfaitement à l'oeuvre de Vasubandhu; le philosophe y réfute chemin faisant les thèses condamnées par l'orthodoxie, le dernier chapitre se présente même expressément comme une "Réfutation" dirigée contre les doctrines qui adhèrent à la personnalité (pudqala) Le mot sampūrna "rempli" qui accompagne l'expression dharmakośah n'est pas moins suggestif, c'est le terme qui marque régulièrement la fin d'une composition, d'un manuscrit Quant à l'épithète praktiri puhttah, je ne crois pas que Fleet l'ait interprétée exactement "stolen by the enemy which is original nature", je ne vois pas que le bouddhisme ait dénoncé la Nature comme l'ennemi; c'est un trait propre au Sāmkhya, et que le bouddhisme ne lui a pas emprunté. Le Grand Véhicule a même fini par enseigner que les êtres sont de nature (prakrtyā) en état de Nirvāņa Le sens le plus simple de praktiripu, c'est "ennemi naturel", les ennemis naturels du salut, sans doute Māra et ses auxiliaires, avaient détruit le Trésor de la Loi, puisque la Loi est condamnée à disparaître au bout d'un intervalle fatal après chacun des Bouddhas successifs Le Bouddha a réussi à retrouver (sādhīta) ce trésor pour le bonheur du monde. Mais il est probable que l'épithète praktteripuhrtah doit aussi s'appliquer à l'Abhidharmakośa; on peut supposer que l'Abhidharma, le système et aussi la littérature de ce noni, avait après la grande époque des ouvrages classiques: Jñānaprasthāna etc.... passé par une éclipse d'où le génie de Vasubandhu l'avait dégagé. Ainsi d'un bout à l'autre, la stance se développerait comme il convient en deux couches parallèles de significations; en exaltant le Bouddha, elle exalterait aussi ce maître salué couramment comme un Bodhisattva, Vasubandhu, et la question de la date prendrait une nouvelle importance en présence des opinions divergentes sur la date de Vasubandhu.

La seconde stance est un éloge de Mahākāśyapa; ici, nous sommes sur un terrain plus sûr, et la traduction de Fleet aura à subir de fortes retouches. Le texte porte:

naırodhīm śubhabhāvanām anusrtah samsārasamkleśajın Maıtreyasya kare vimuktivaśitā yasyādbhutā vyākṛtā nirvānāvasare ca yena caranau dṛstau muneh pāvanau pāyād vah sa munīndraśāsanadharah stutyo Mahākāśyapah

Fleet traduit. "May he, Mahākāśyapa, who is worthy of praise, protect you, — he who observed the precepts of (Buddha) the chief of saints; who practised that auspicious habit of abstract meditation which is of the nature of a trance, who overcame the anguish of successive states of existence, whose wonderful subjugation of the passions in final cmancipation (is to be) displayed in the hands of Maitreya, and by whom the two pure feet of (Buddha) the saint were behold at the time of attaining Nirvāna."

Les deux dernières lignes de cette stance sont parfaitement claires, ou presque, l'épisode évoqué par la troisième ligne est bien connu. c'est Mahākāśyapa qui a vu les pieds du Maître à l'occasion du Nirvāna, le bûcher qui devait consumer les restes sacrés ne pouvait pas s'allumer avant que le grand disciple "le fils aîné du Bouddha" comme l'appelle le Vinava des Mahāsāmghika, ne fût venu saluer respectueusement les pieds du Bouddha.¹ C'est un épisode commun à toutes les traditions, Mülasarvästivädin, Sthavira (pāli), Mahāsāmghika. A la quatrième ligne, l'épithète munindrasasanadharah que Flect traduit: "he who observed the precepts of (Buddha) the chief of saints" a certainement une valeur mieux définie. L'adjectif dhara, combiné avec les noms qui désignent les parties intégrantes du Canon, indique une compétence spéciale dans telle ou telle branche on est Vinavadhara si on possède à fond le Vinaya, Mātikā (Mātrkā) dhara si on connaît les rubriques de l'Abhidharma, Dhamma (Dharma) dhara, si on est versé dans l'ensemble. Mais Mahākāśyapa dispose d'une connaissance

¹ Cf Przyluski, le Parinirvana et les Funérailles du Buddha, dans Journ Asiat 1920, I, 19–20

incomparable: il connaît tous les textes sacrés, et c'est à ce titre qu'il est désigné à l'unanimité pour présider le concile qui fixe pour la preière fois le Canon. L'épithète de Śāsanadharah rappelle expressément cet honneur privilégié qui est échu à Mahākāśyapa

La seconde ligne fait allusion à un incident qui n'a pas échappé à Fleet, quoique le passage, il l'avoue, lui paraisse obscur Fleet rappelle en note, ad locum, que "le Buddha, sur le point d'atteindre le Nirvana, a remis à Mahākāśyapa sa robe jaune (kāsāya), en le chargeant de la transmettre à Maitreya, quand celui-ci attemdrait la condition de Bouddha," et il renvoie à la traduction de Hiuan-tsang par Beal 1 L'étude des légendes du Bouddha Maitreva a fait de notable progrès depuis la publication des Gupta Inscriptions Mr Matsumoto Bunzaburo a publié en 1911 une remarquable monographie sur la Terre Pure de Maitreya (Miroku jodo ron) qui a été savamment analysée, discutée et complétée par Noel Péri dans le Bulletin de l'Ecole Française d'Extrème-Orient, tomc XI, 1911, pp 439-457 M Przyluski a réuni divers textes sur le Nirvāna de Mahākāśyapa dans un article sur "le Nord-Oucst de l'Inde dans le Vinaya des Mūla Sarvāstivādin, Jour Asiat. 1914, II, 522 sqq. M. Ernest Leumann a publié une longue étude sur un ouvrage rédigé en Asie Centrale, "Maitreyasamiti, das Zukunftideal der Buddhisten," 1919, 2 fasc, dans l'introduction il a résumé les principaux textes de la littérature maitrévénne du Canon chinois, p. 11-23 M P Demiéville, en rendant compte de cc travail dans le Bulletin de l'Ecole Française d'Extrême-Orient, tome XX, pp. 158-170, a lui-même apporté de nouveaux documents Un autre ouvrage originaire de l'Asie Centrale, le Maitreyasamiti-nātaka, connu par des fragments découverts à Tourfan, a suscité plusieurs travaux dus à MM Sieg et Siegling et à M F. W K Muller, et publiés dans les Comptes-rendus de l'Académie de Berlin, 1908 et suiv

Si nous acceptons la traduction de Fleet pour la seconde ligne de la stance, il est juste de nous demander comment "la merveilleuse subjugation des passions (de Mahākāśyapa) dans l'émancipation finale (doit être) étalée dans les mains de Maitreya" Le geste de Mahākāśyapa remettant au nouveau Bouddha la robe de son prédéeesseur Sākyamuni, ne suffirait pas à "manifester cette merveilleuse subjugation." D'ailleurs, un détail de philologie nous avertit iei d'une erreur probable. Le mot vyākrtā a, comme toutes les formations tirées du verbe vyākar, une valeur spéciale et bien définie dans la langue du bouddhisme, il s'agit toujours en ces cas de prophéties dues au Bouddha, et qui révèlent l'avenir d'un individu, d'une localité etc.

¹ Buddh Rec West World, II, 142 sqq

La carrière de Maitreya, y compris sa visite à Mahākāśyapa, est toujours énoncée, puisqu'elle appartient à l'avenir, sous la forme d'une prédiction communiquée par Śākyamuni à ses disciples. Il n'est donc point douteux que, dans le passage en question, vyākrta doit recevoir son sens spécifique "prédit", on aurait alors pour la ligne entière: "Dans la main de Maitreya, la subjugation des passions (de Mahākāśyapa) dans l'émancipation finale a été prédite (par le Bouddha)." La traduction obtenue est absurde et s'élimine d'elle-même.

Arriverons-nous à un sens meilleur par la voie de l'expression vimuktivasitā. La vasitā est la maîtrise absolue exercée par le saint, Arhat ou Bodhisattva selon les Véhicules, sur des catégories déterminées de domaines La Mahävyutpatti (XXVII) donne une liste des 10 vasitā des Bodhisattva, la vimuktīvasitā n'y figure pas, mais on y relève un mot très analogue à vimukti, l'adhimukti qui constitue la sixième des dix vasitā Somnies-nous en présence d'une alternance de termes? Un passage curieux de l'Abhidharmakośa, maintenant ouvert à la curiosité des chercheurs par le labeur intrépide de M. de Lavalléc-Poussin, semble le suggérer Au livre VII, 52 Vasubandhu institue précisément une discussion sur le cas de la survic de Mahākāśvapa; il vient d'examiner les conditions d'existence des êtres suscités par magie (nirmita), ils durent grâce à l'adhisthana de celui qui les a créés. M. de Lavallée adopte le mot "protection" pour traduire adhisthana; je cite sa traduction, p 120. "Ce n'est pas seulement pour la durée de sa propre vie que le créateur est capable de 'protéger' une chose de telle manière qu'elle dure, sa 'protection' peut faire aussi que la chose dure jusqu'après sa mort C'est ainsi que par sa protection (adhisthāna ou adhimoksa, résolution) Kāśyapa lc Grand a fait que ses os dureront jusqu'à l'avénement du Bhagavat Maitreya Non pas à l'endroit de ce qui n'est pas dur C'est seulement la chose dure qui est susceptible d'être 'protégèe' pour une longue durée C'est pourquoi Kāśyapa le Grand ne 'protège' pas sa chair D'autres maîtres disent: Non. — Le corps protégé par la force de la 'résolution' (adhimoksa) n'est pas capable de durer au-delà de la mort. Si les os de Kāśyapa durent, c'est par la 'protection' (adhisthāna) des dieux."

L'alternance adhisthāna-adhimoksa, indiquée par M de Lavallée sans autre explication, est fondée en fait sur la Vyākhyā de Yaśomitra encore inédite pour cette partie du texte Mon manuscrit lit (p 272b): āryamahākāśyapādhisthāneneti. āryamahākáśyapādhimoksenety arthah. Ainsi c'est la vertu de l'adhimokṣa de Mahākāśyapa qui fait durer ses os, et ses os seulement sans la chair. M. de Lavallée, si familier avec l'ensemble de la littérature bouddhique, n'a pas manqué de citer en

note sur ce passage une ligne du Divyāvadāna, 61: Maitreyah. . . . Kāśyapasya bhiksor avikopitam asthisamghātam daksinena pāninā arhītvā . . . "Maitreya, prenant dans sa main droite l'assemblage des ossements du bhiksu Mahākāśyapa qui n'avaient pas bougé ..." Ce détail saisissant coincide de manière frappante avec les termes de notre stance "En ce qui concerne la main de Maitreya, la maitrise absolue de survie (de Mahākāśyapa) a été prédite (par Sākyamuni)." Le passage fait partie, dans le Divya, du Maitreyavadana, en réalité, ce réeit prophétique de la carrière de Maitreya a été découpé dans le Vinava des MülaSarvāstivādin, il v est inséré dans l'Osadhivastu, Chap VI de la version chinoise 1 Maitreya, arrivé à la Bodhi complète, entouré d'une foule de disciples, se rendra au mont Gurupāda, où la masse des ossements de (Mahā) kāśyapa le bhiksu reste sans bouger, la montagne s'ouvrira pour Maitreya, alors Maitreya prendra dans sa main droite l'assemblage des ossements du bhiksu Kāśyapa qui n'ont pas bougé, il les posera sur sa main gauche, et c'est ainsi qu'il enseignera la Loi "

La coincidence de l'inscription avec le Vinaya des MūlaSarvāstivadın est frappante, elle l'est davantage encore quand on constate que dans la littérature maitrévenne, pourtant abondante, le détail ne reparaît nulle part ailleurs Dans un certain nombre de réeits, Mahākāśvapa tiré de son recueillement par l'arrivée de Maitreva, lui remet le vêtement (samghātī) du Bouddha que le Maître lui avait donné pour le passer à son successeur, ² l'épisode manque dans la version abrégée mise aussi sous le nom de Kumārajīva, 3 il manque aussi à la rédaction versifiée traduite par Yi-tsing (et dont j'ai retrouvé l'original sanscrit: Maitreya-vyākarana), 4 dans le Koan Mi-le p'ou sa hia cheng king, traduit par Tchou Fa-hou 5 Maitreya, parvenu en présence des restes de Mahākāśyapa, prend lui-même la samghātī que celui-ci avait reçue du Bouddha, le Vinaya des MīlaSarvāstivādin enregistre aussi cette forme de la légende dans la section du Ksudrakavastu, chap 40, Tok. XVII, 2, 94a eol 3, M Przyluski a traduit ce morecau du Vinava dans le Journal Asiatique, 1914, II, 527, e'est aussi cette forme qui a été incorporée dans l'Asokāvadāna, v Przyluski, La Légende de l'Empercur Asoka, p 334.

¹ Tok XVII, 4, 21b, col 5, texte tibétain dans le Dulva, vol II

² Mi-le ta tch'eng fo king, trad Kumārajīva Nj 209, Tok IV, 546b, col 3

³ Mi-le hia cheng king, N₁ 205, Tok XXV, 9, 31b, col 6

⁴ Mi-le hia cheng tch'eng fo king, Nj 207, Tok IV, 5, 50-51

N_J 208, Tok IV, 5, 48b, col 12 = Tseng-yı A-han (Ekottarāgama) chap 44,
 N_J 543, Tok XII, 3, 34b, col 16.

Les deux formes de la légende se ramènent peut-être à la confusion, accidentelle ou volontaire, de deux mots très voisins: dans un cas, il s'agit de la samghātī, la robe (du Bouddha); dans l'autre, il s'agit d'un samghāta, ou plutôt d'un samghāta, un assemblage (d'ossements) ou une charpente (d'ossements); le texte du Divya donne samghāta, mais samghāta ne serait pas moins correct, et le pāli dans l'expression atthisamghāta a normalement la cérébrale. J'ai déjà signalé, et aussi dans le Divyāvadāna, et dans un morceau qu'il a également emprunté au Vinaya des MūlaSarvāstivādin, une confusion analogue ¹ dans l'énoncé du 82º siksāpada, l'expression anirgatāyām rajanyām correspondant à anikkhantarājake du pācittiya 83 dans le Vinaya pali; rajanī "la nuit" a remplacé rājaka "la personne royale." ²

J'ai admis jusqu'ici la substitution du mot adhimukti au mot vimukti dans le texte de l'inscription. La lecture donnée par Fleet est cependant exacte Mais la lettre v ne se distingue de la lettre dh, dans l'écriture des Gupta, que par un petit trait horizontal tracé au sommet de la panse commune aux deux caractères Une confusion, du fait du scribc ou du graveur, est toujours possible. L'a initial du mot adhimukti doit s'élider après la finale du mot kare. Mais même si on écarte cette correction, l'alternance vimukti-adhimukti peut se justifier par de nombreux textes Vasubandhu lui-même se sert de l'un des termes pour définir l'autre 3 La vimukti "délivrance" est de deux sortes, composée ou simple L'adhimoksa est la vimukti "composée," et la Vyākhyā de Yasomitra glose: adhimoksah samskitā vimuktir iti dhātvarthaikatvāt "parce que la racine (muc) a le même sens (dans les deux mots)." La Vibhāsā, dans un passage cité par Lavallée Poussin, porte: 4 "Le Bhadanta dit que les vimoksa sont ainsi nommés parce qu'ils sont obtenus par la force de l'adhimoksa" Ailleurs encore, Lavallée Poussin cite Samghabhadra, pour l'explication du mot adhimukti "D'après d'autres maîtres, adhi signifie" supériorité, souveraineté, "mukti signifie vimoksa" Il serait oiseux de multiplier ces témoignages.

Qu'est-ce donc que l'adhimukti ou adhimoksa? M de Lavallée Poussin a réuni et discuté plusieurs définitions tirées des traductions chinoises; mais nous avons maintenant l'avantage de pouvoir utiliser dans son original une définition donnée par Vasubandhu lui-même, et

⁴ *Ibid* , VIII, 32d, p 207

⁵ Ad II, 24, p 155

dans l'ouvrage classique qui passe pour couronner sa carrière. La vrtti sur la kārikā 10 de la Trimsikā dit: adhimokso niścite vastuni tathaivāvadhāranam. niścitagrahanam aniścitagratisedhārtham. yuktita āntopadešato vā vad vastu asamdradham tan niscitam venaivākārena tan niścitam ity aduhkhādyākāreņa tenawākāreņa tasya vastunas cetasy abhinive sanam evam etan nanyathety avadharanam adhimok sah. cāsamhāryatādānakarmakah. adhimuktipradhāno hi svasiddhāntāt parapravādibhir apahartum na śakyate "Adhimoksa, c'est à propos d'un objet décidé, l'affirmation qu'il est exactement amsi Il dit 'decidé' pour éliminer tout ce qui n'est pas décidé Décidé veut dire un objet qui est hors de doute en vertu d'un raisonnement ou en vertu d'une autorité compétente. De quelque nature que cet objet ait été décidé, par exemple exempt de douleur etc. . . , la certitude ancrée dans l'esprit que cet objet est précisément de cette nature-là, c'est l'adhimoksa. Il a pour effet de donner l'inébranlabilité Celui chez qui l'adhimukti domine ne peut pas être détaché de sa doctrine par les champions d'autres doctrines" Yaśomitra, dans sa Vyākhyā sur le Kośa II, 24, p. 154, rapporte d'autres définitions qui ne s'écartent pas sensiblement de celle-ci. Adhimoksa est donc la "conviction" Un exemple frappant de ce qu'est l'adhimoksa est fourni par le Samyuttanikāya I, 116.1 ākankhamāno ca pana bhante Bhagavā Himavantam pabbatarājam suvannam ty eva adhimucceyya, suvannañ ca pan' assā ti. 'Bhagavat, pour quelque fin, était convaincu que l'Himavat est en or, la montagne serait en or." Et de même Kathāvatthu II, 608. āyasmā Pilindavaccho rañño Māgadhassa Seniyassa Bimbisārassa pāsādam suvanņan teva adhimucci suvanno ca pana āsi "L'āyasmā Pilindavaccha eut la conviction que le palais du roi de Magadha, Seniva Bimbisara, était en or, et le palais fut en or " La conviction d'un saint ne saurait être fausse, et c'est ainsi que Mahākāśyapa s'étant convaincu qu'il devait attendre l'arrivée du futur Bouddha avant d'entrer dans le Nırvāna, ses ossements se sont maintenus intacts (avikopita) première épithète de Mahākāśyapa va maintenant à son tour se préciser: nairodhīm śubhabhāranām anusrtah Fleet traduisait: "who practised that auspicious habit of abstract meditation which is of the nature of a trance." Mais chacun da ces termes a sa valeur technique. Nairodhīm est un adjectif dérivé de nirodha; le nirodha, c'est le "barrage" de l'intellect et des dharma de l'ordre de l'intellect (cittacaittānām nirodhah). L'exercice spirituel (bhāvanā) de l'ordre du nirodha,

¹ Samyuktāgama, Tok. VIII, 4, 28, col 1, cf. aussī Mahāyānasūtrālamkāra XVIII, 83

c'est la nirodhasamāpatti, état analogue au Nirvāna (nirvānasadrša),1 mais qui s'en différencie parce qu'il est susceptible de rechute, la conscience verbale (samjñā) et la conscience de sensation (vedanā) ont alors disparu Il constitue le dernier terme de la chaîne des vimoksa qui sont au nombre de huit; 2 et l'exercice des vimoksa a pour fruit, entre autres, "le pouvoir par lequel un saint transforme ou fait durer (adhisthāna)", 3 Yasomitra, dans son commentaire sur ce passage, introduit le terme adhimoksa cette fois encore pour gloser le mot adhisthāna du texte tathādhimoksād adhisthānam sthirasya vastunah iyantam kālam aratisthatām iti.; ainsi la nairodhī bhāranā de Mahākāśyapa prècède en fait, comme dans la stance, sa vimultivasità (adhimo) Qu'il s'agisse, dans le cas particulier de Mahākāśvapa, de la nirodhasamāpatti, c'est ce qui est prouvé par le texte du Maitreyavyākarana traduit par Kumārajīva 4 A l'arrivée de Maitreya dans sa caverne, Mahākāśyapa sort 從 歌 盡 定 "de la méditation de totale extinction": c'est là exactement la traduction consacrée du terme nirodhasamāpath ⁵ Le terme śubhabhāvanā, employé metri causa, est une périphrase exacte de samāpatti, car bhāvanā est expliqué par Vasubandhu comme samāhitam kuśalam6" le bien à l'état de recueillement", chacun de ces deux termes est un équivalent assez exact de chacun des deux termes śubhabhāvanā II n'est pas jusqu'au mot anusrtah d'apparence assez anodine pourtant, qui ne semble exprimer une notion d'ordre Un adjectif dérivé du verbe anusar° se combine avec śraddhā et dharma pour désigner les deux premiers degrés de la sainteté śraddhānusārın et dharmānusārın 7 le stage suivant est le śraddhādhimukta, puis vient le distiprapta, et ensuite le kayasaksin lequel a réalisé la nirodhasamāpatti On voit clairement que la suite des épithètes s'enchaîne dans une relation de causalité conforme aux exigences de la théorie ascolastique

Le reste de l'inscription est essentiellement narratif, je ne retiendrai que le premier mot, mis en tête de la stance qui suit l'invocation à Mahākāśyapa Les disciples de ce saint y reçoivent l'épithète de Samyuktāgamınah Fleet traduit "endowed with a connected tradition of doctrine" Le sens attribué à samyukta par Fleet est pour le moins douteux. Mais Samyuktāgamın ne peut manquer, dans un texte d'inspiration bouddhique, d'évoquer le nom sacré du Samyuktā-

gama correspondant au Samyutta nikāya du pali, un des quatre Agama (en pali Nıkāya) qui constituent les plus anciens recueils de sūtra. Aınsi les disciples de Mahākāsyapa établis à Ceylan se réclament du Samyuktāgama, le trait n'est pas assez caractéristique pour préciser leur école, les Mahāsāmghika, les Sarvāstivādin, les MūlaSarvāstivādin sont d'accord pour placer en tête des Āgama le Samyukta, que les Sthavira classent seulement en troisième ligne Il y a là toutefois un indice de plus pour nous empêcher de ranger sommairement Mahānāman parmi les Theravādin, Ceylan, nous le savons par plus d'un témoignage, était loin d'être le domaine de cette école exclusivement dans les premiers siècles de l'ère Au reste, la question de l'Āmradvīpa où Mahānāman est installé en résidence (adhirāsin) est loin d'être résolue Fleet avait admis sur la foi d'une communication de Cunningham que "le nom d'Ile de la Mangue est un autre nom de Cevlan, qui aurait été désignée ainsi à cause de sa forme semblable au fruit du manguier " J'ignore s'il s'agit là d'une fantaisie personnelle de Cunningham, je n'ai jamais reneontré cette désignation d'Āmradvīpa dans aucum texte pali ou sanscrit Mais je ne puis m'empêcher d'observer que si on admet ce sens pour ce passage, l'épithète Lankādrīpaprasutah "originaire de l'île de Lankā" parait tout à fait oiseuse Mais je ne veux pas m'engager ici dans cette discussion d'ordre géographique Je me suis proposé seulement de montrer, par un exemple choisi, à quel point l'épigraphie bouddhique est inséparable de l'étude des textes, quelle lumière elle peut en recevoir et aussi leur apporter Je suis heureux de dédier cette tentative à mon très cher ami Ch R. Lanman à qui l'indianisme et les indianistes doivent tant d'obligations. le maître de Henry Clarke Warren, l'éditeur de cette magnifique Harvard Oriental Series qui a débuté par la Jātakamālā de Kern et qui vient encore de nous donner en trois beaux volumes la traduction du commentaire du Dhammapada par E W Burlingame.

Collège de France

THE DATE OF THE AMOHINI VOTIVE TABLET OF MATHURA

By EDWARD JAMES RAPSON

In MY chapter on the "Scythian and Parthian Invaders" in the Cambridge History of India (Vol I, pp. 563-585), I accepted without hesitation "year 42" as the correct reading of the date in the Āmohinī votive tablet, which was inscribed while the Çaka ruler Çoḍāsa was governing Mathurā as Great Satrap, and I noted (page 576, note 1) that Bühler also had originally been inclined to read the decimal figure as 40,1 but had subsequently changed his opinion and preferred to regard this symbol as representing 70.2 From a careful examination of the photo-lithograph which illustrates Buhler's edition of the inscription in Epigraphia Indica (Vol II), I was convinced, as I am still convinced, that Bühler's first reading was correct, and that the sign in question should be read as 40.

Professor Sten Konow in his article on the Takht-i-Bāhi inscription ³ says: "Professor Rapson has evidently overlooked the important article by Professor Luders, *Ep Ind*, IX, pp 243 ff, where it has been conclusively proved that the numerical symbol used in the inscription stands for 70 and not for 40."

It was evidently undesirable in a work like the Cambridge History of India to discuss minute points of scholarship, and I contented myself, therefore, with an expression of my own opinion and that of the editor of the inscription concerning this much debated point. But the views of a distinguished epigraphist like Professor Luders deserve serious consideration, and I am glad of an opportunity of explaining why in this particular instance I feel unable to agree with him

I have now most carefully studied the article of Professor Luders, with the result that, while admiring the accurate and scholarly manner in which he has collected and arranged all the relevant evidence, I cannot accept the conclusion which he draws from this evidence.

The Brāhmī numerals for 40 and 70 which occur in the inscriptions of the Çakas and the Kusānas either very closely resemble the Brāhmī aksaras $\mathbf{H} = pta$ and $\mathbf{H} = p\bar{u}$, or they are conventionalized (cursive) forms which are manifestly derived from them. The aksaras them-

¹ Epigraphia Indica, ii, 199

² Ibid , 1v, 55

³ Acta Orientalia, iii, 57, n 1

selves agree in their upper portions (=pa), but they are so very different in their lower portions, that it would be surprising to find precisely similar forms derived from each.

Buhler, to whose great work, Indische Palaeographie, we all owe so much, seems to have overlooked this necessary consequence of his statements on page 76. "40 = pta... der mitunter cursiv in ein Kreuz... verwandelt wird", 1 and on page 77. " $70 = p\bar{u}$... neben dem cursiven Kreuz" The two cursive forms here cited are, as represented in the Plate, practically identical. Each is what Professor Luders very conveniently calls "a St Andrew's cross." It is difficult to believe that there can have been in use in the same script and at the same period forms for 40 and 70 which were so similar as to be almost indistinguishable.

Professor Luders, limiting his observations to those Brāhmī inscriptions which come from the neighborhood of Mathurā says (page 244) "There are two symbols, the St Andrew's cross and the *pta*, one of which must represent 70 and the other 40" But surely this does not follow as a necessary consequence. It is at least possible that the St Andrew's cross may be, as I suppose it to be, merely a cursive form of the *pta*.

As a record of the history of Brāhmī numerals the coins of the Western Ksatrapas are most instructive They supply us with a remarkably continuous sequence of dates ranging from 1[00] to 31[x]. On them we have numerous examples of the numeral 40 during the decades 140-149 and 240-249, and of the numeral 70 during the decades 170-179 and 270-279, 3 and there is never any possibility of confusion between the two symbols, as the dates of the rulers who struck the coms are well known In my volume of the British Museum Catalogue of Indian Coms, Andhra Dynasty, I give the normal form for 40 as X, and the normal form for 70 as $\frac{1}{3}$ (Introduction, page ccviii). It is evident that the 40 still resembles $\frac{1}{2} = pta$, and it is evident also that, if the two constituent elements of this or any other form of nta the pa and the ha, were made more angular, a figure resembling a St. Andrew's cross would be the result In the 70, on the other hand, while the pa of the $\mathcal{L} = p\bar{u}$ remains recognizable, the bend of the stem to the left and the horizontal stroke to the right, which together represent \bar{u} , have become a loop. And this loop on the coins is characteristic of

¹ Taf ıx, Col v, A

² Ibid, Col vii

⁴ British Museum Catalogue of Indian Coins Coins of the Andhra Dynasty, the Western Ksatrapas, etc., Plates XII, XIII, XIV, XV, XVII

70. It never appears in 40 or in any other numeral except 70; and on well struck coins it is never wanting in 70.

It is quite certain, then, that the St Andrew's cross is never used to represent 70 on the coins. What evidence is there to prove that it is sometimes so used in inscriptions?

After examining minutely the instances quoted by Professor Luders in support of his view, so far as they can be tested by the photo-lithographs given in the *Epigraphia Indica*, I am persuaded that there is no certain evidence.

Professor Luders relies, in the first place, on the "Mathurā Stone Inscription, dated Samvat 74" which he edited in *Ep. Ind.*, Vol. IX, pp. 241 ff. In note 5 of his remarks on the text he observes (page 242):

"Owing to a flaw in the stone, a small portion of the lower left cross-bar of the symbol has disappeared In the impression somebody has tried to restore the missing portion by adding in pencil a hook turning upwards, but there is nothing to warrant this restoration. There can be no doubt that the symbol had the shape of a plain St. Andrew's cross, just as in the other inscriptions."

The photo-lithograph "from a damaged rubbing" unquestionably shows either that there is a break in the stone, or that the rubbing has failed, on the lower left of the decimal figure in the date, and that someone in attempting to fill the lacuna has traced a portion of the curve which, if continued, would make a loop such as is characteristic of the numeral 70 on the coins. But is it certain, as Professor Luders seems to assume, that the restorer, whoever he may have been, had no authority for his restoration? Is it not more probable that he felt justified by traces visible on the stone but not reproduced in the rubbing? Unfortunately it appears not to be possible at the present time to decide this point from an inspection of the actual inscription.

The date of the inscription must undoubtedly, as Professor Luders rightly points out (page 244), be Samvat 74, since the name of the king begins with Vāsu—, and any date including the decimal 40 would fall in the reign of Huviṣka; but I cannot agree that he has "conclusively proved" that 70 is here represented by the St Andrew's cross. To me it seems more reasonable to regard the sign as a mutilated specimen of the looped form which is seen very distinctly in the "Mathurā Inscription of Samvat 79," and which is essentially identical with the undoubted form for 70 found on the coins of the Western Kṣatrapas.

¹ Ep Ind, vol 11, p 204, no 20 and Plate, Professor Lüders (p 245) reads the decimal figure as 40, but I think the evidence of the coins is quite decisive on this point

Professor Luders quotes seven inscriptions from Mathurā or its neighborhood, in all of which he proposes to regard the St. Andrew's cross as representing 70, and not 40 as had been supposed previously by himself and other scholars. There is, so far as I can judge, no internal evidence in any of these which will enable us to determine this question beyond possibility of doubt. But, as Professor Luders himself observes (page 245), one of the inscriptions (his number 4) "mentions the mahārāja rājātirāja devaputra Hūviska, but not in connection with the date, the inscription simply recording a gift to the vihāra of that king." Evidently this affords no proof, but there is, I think, some probability that the donation recorded may have been made to a vihāra recently founded by the reigning sovereign. To this extent, even in the absence of other considerations which I consider to be far more cogent, I should rather prefer the reading 40 which would give a date in the reign of Huviska.

On the whole, therefore, I consider that the case for 70, though pleaded with great learning and much ingenuity, has failed, while I think that the forms for 40 and 70 on the coins of the Western Ksatrapas afford a safe criterion by which we may distinguish these numerals in the inscriptions. The St. Andrew's cross is easily and naturally explained as a cursive form of 40, that is, of $\mathcal{H} = pta$, or of its modification, \mathcal{H} , which appears on the coins. I find it hard to believe that it can possibly be a cursive form of 70, when it lacks all traces of the stem bending to the left with its horizontal stroke on the right which are the distinguishing features of the $\mathcal{H} = p\bar{u}$, or of the loop at the base which has taken their place in its numismatic representative \mathcal{H} .

Accordingly my faith in the correctness of the reading "year 42" = B.C. 17-16 on the Āmohinī inscription is still unshaken. Much of the perplexity which scholars have found in their attempts to arrange the chronology of the Çakas and the Kusānas seems to me to be due to the belief caused by the reading "year 72," that the Great Satrap Çoḍāsa ruled thirty years later, that is to say, so late as the second decade of the first century A.D.

CAMBRIDGE UNIVERSITY

REMARKS ON A KHAROSTHI INSCRIPTION FROM THE KURRAM VALLEY

By STEN KONOW

In the Annual Report of the Archaeological Survey of India 1917–18, pp. 31 f., we read "The only epigraphical discovery made in the Frontier Circle was an inscribed copper relic casket, the property of one of the sons of the Nawab of Landi. It is stated to have come from the Kurram valley and is shaped like a miniature $st\bar{u}pa$ with $harmik\bar{a}$ and umbrellas, all complete. The inscription consists of four lines in the Kharosthī script of the second century a D, punctured on the four sides of the base of the casket, and is dated on the 20th day of the month of Āśvina, the year being doubtful. In the opinion of Mr. V. Natiśa Aiyar, Archaeological Superintendent, Frontier Circle, the record refers to the enshrinement of relics of the Buddha Sākyamuni in a monument belonging to the Sarvāstivādins." ¹

During my stay in Peshawar in March, 1925, I examined the photographs of the casket in the museum, which were quite sufficient for determining the reading of the greater portion of the record. Some few passages were, however, illegible, and as the record seemed to be of some importance, I called on the owner, the Arbab Muhammed Abas Khan, who kindly allowed me to take the inscribed portion of the casket to Taxila in order to get it reproduced. In Taxila I showed the inscription to my friend Sir John Marshall, and we both went through it together and chequed my provisional reading

There are, as has already been stated, four inscribed sides, which I designate as A, B, C, D, respectively A and D each contains four, B and C each three lines of Kharoṣthī letters, executed by means of punctured dots, as in several other inscriptions of the Indo-Skythian period. The arrangement of the epigraph is such that 1 1 of A is followed by 1 1 of B, and so on From D¹ we have to turn to A¹¹, and thence we proceed on till D¹¹¹, after which comes D¹² (and finally A¹²).

The beginning of A^1 is defaced, but Sir John agrees with me that there cannot be any doubt about the actual reading. There is a hole in the casket at the beginning of C^1 , where three or four aksaras have been lost. In other respects the inscription is in an excellent state of preservation.

¹ Cf Annual Report of the Archaeological Survey, Frontier Circle, 1917–18, p 2, and N G Majumdar's List of Kharosthi Inscriptions, No 26, Journal of the Asiatic Society of Bengal, N S, xx, 10

The characters are Kharosthi of the Kaniska period, and only the shape of the letters and their transliteration necessitate some few remarks. I have explained elsewhere why I render the sign which is usually considered to be the common Kharosthi sign of the aspirated voiceless palatal as ks and not as ch. In the first place it only occurs where the corresponding Sanskrit word presents ks, and in the second place another Kharosthi letter is used where we have to do with an old or derived ch I do not suppose that any epigraphist would think it likely that we should have two letters for one and the same sound, and since an examination of all the passages where the two signs occur in Indo-Skythian inscriptions and in the Kharosthi manuscript of the Dhammapada 1 shows that they are always correctly distinguished, we have no right to transliterate both in the same way. I look on such words in which the letter corresponding to Sanskrit ks occurs as Sanskritisms, that is, as loan-words. For it seems to me that the regular development in the North-Western Prakrit was from ks to kh 2

A peculiarity of the Landi record is a slanting vertical above the letter k in samkara B^{11} , kamdhasa D^{111} . In both cases k is derived from sk, cf Skr samskāra and skandha respectively. We have very unsatisfactory material for judging about the treatment of the compounds containing a k preceded by a sibilant in the old North-Western Prakrit. The Dhammapada manuscript has sakhaca, Skr * satskrtya, O 3, kanhana, Skr skandhānām, B 13, puskara, O 21, nikhamadha, Skr. niskrāmata, Au 4, nskhama, Skr naiskramya, B 25 In the inscriptions we have, if we abstract from foreign names such as Kaneskasa in the Mānikyāla, Kaniskasa in the Zeda, [Ka]neskasa in the Kaniska casket, Kaneskasya in the Sue Vihār and Hoveskasya in the Wardak vase epigraphs, perkarını in the Pathyār and Jukaranı in the Kaldarra Kadhavaro on the Mathura Lion Capital is uncertain, because we do not know whether this word represents a Skr skandhāvāra or, as suggested by Professor Luders, contains the noun kantha, town. We get the impression that a sibilant tends to aspirate as following k. but that this aspiration is so little pronounced that it is frequently left unmarked I would therefore transliterate the vertical as h within

 $^{^1}$ I quote this important text after the edition of M. Senart, Journal Asiatique, x1, x11, 1898, 192 ff , marking as O the fragment published by S. Oldenburg, St. Petersburg, 1897

² Cf from the Dhammapada manuscript bhikhu, Skr bhiksu, B9, &c, pradimukhe, Skr prātimokse, B 17, cakhuma, Skir caksusmat, A¹¹¹ 4 In face of suchforms I think that we must consider bhiksave, B 53, bhiksavi A¹¹ 5, ksaya A¹ 3, caksuma, A¹¹¹ 3, ksiravayo, Skr ksīrapāka, B 54, as foreign loans and transliterate the letter in question as ks and not as ch In ordinary speech kh was probably substituted.

parentheses and see in this sign the mark of a slight aspiration. In favour of this transliteration I may add that a similar vertical apparently marks an aspiration also in other cases

The sign which is usually transliterated as f in Gudufara in the so-called Takht-i-Bahi inscription and elsewhere consists of an ordinary v with a slanting vertical attached at the upper end to the right, and Professor Luders was probably right in suggesting 1 that it be transliterated as vh. The consonantal compound which is usually transliterated as st has a vertical rising from the cross-bar in the Hidda inscription and in some instances in the Central Asian Kharosthī records, where Messrs Boyer, Rapson and Senart transliterate sth

I therefore provisionally transliterate samk(h)ara, k(h)amdhasa, respectively, but I willingly admit that this rendering is far from being certain

A similar remark holds good with reference to the curved line found above s in tasa A^{111} A similar curve is not infrequently used in the Dhammapada manuscript, where old dhy is, to take an instance, sometimes represented by jh, sometimes by j and sometimes by j with a curved line above, thus padwijhu, Skr pratwidhya, B 29, jai, Skr. $dhy\bar{a}ya$, B 4, 34, jana, with the curve above j, Skr. $dhy\bar{a}na$, B 16. It seems probable that the curve marks a slightly pronounced aspiration, and I therefore transliterate the word in A^{111} tas(h)a, supposing it to have been spoken with a slightly aspirated s.

The reading of the inscription does not present great difficulties. It runs as follows.

A¹ [Sam 20 masa]sa Avadunakasa di 20 isa ksunammi

B1 Svedavarma Yasaputra tanuayamını raña mi-

C1 . mi acaryana Sarvastivadana pari-

¹ JRAS, 1909, pp 655 ff

It will be seen that no cerebral n is used in the record, and further that the penultimate in the locative termination ami is always followed by an anusvāra. Thus ksunammi A¹, tanuayammi B¹, parigrahammi C¹, thubammi D¹. For the latter reason I do not think it likely that the final three aksaras of B¹ should be read as one word and explained as the locative of raña, which might represent a Skr. aranya. I would take raña as the equivalent of Skr. rājñā and see in mi the beginning of the Rājan's name It is, of course, impossible to say which letters have stood in the beginning of C¹, where there is now a hole in the casket. We might think of some such thing as rena katam, so that the whole would be ran'a Mirena katammi, made by the Rājan Mira, and compare the name of the Mira Boyana mentioned in the Gudufara inscription. But it is of little use to make guesses.

With regard to the reading, I would mention that there are distinct traces of sam and 20 in the beginning of A¹, and the reading of the month is absolutely certain. The photographs in the Peshawar Museum seemed to point to the reading asadasa instead of Sam 20 masasa, but an examination of the original has convinced me of the correctness of the reading adopted above. I absolutely fail to understand how Mr Natisan could read the name of the month Asvina

The reading Svedavarma in the opening of B^1 seems to be certain, but d is probably miswritten for t

The form sarvastivadana, of the Sarvāstivādins, C¹, should be compared with forms such as sarvastivatana and sarvastivatasa¹ on the Mathurā Lion Capital.

It will be noticed that the context is interrupted in the midst of A^{11} and only taken up again in D^{1v} . The intervening space is occupied by a quotation from the Buddhist scriptures, viz, the famous formula of contingent origination. The writing is consistent throughout, only p has by mistake been written instead of ph in the second phasa D^{11} . This shows that the orthography is not absolutely reliable, so that Svedavarma B^1 may be miswritten for Svetavarma and Mahiphatiena A^{1v} for Mahipatiena.

The interpretation of the record presents few difficulties. The era used is the so-called Kaniṣka reckoning, for which Dr. van Wijk and myself have tried to establish that its initial point was A.D 134.² The month Avadunaka is, of course, the Macedonian Αὐδυναῖος, corresponding roughly to December, which has not formerly been met with in

¹ The Sarvāstīvādin Budhīta is said to be *khalula* for the purpose of teaching the foremost Mahāsāṃghīkas *pramā*, read *prama ñavītave* as two words

² Acta Orientalia, iii, 54 and ff

Kharoṣṭhī records. Other Macedonian months occurring in Indian inscriptions are Πάνεμος in the Patika plate, Δαίσικος in the Sue Vihār inscription and ᾿Αρτεμίσιος in the Wardak Vase and the Lahore box lid epigraphs.

The only word which is not immediately intelligible is tanuayammi Bi. There can be little doubt that it is the same word which occurs as tanuvae in the Taxila silver scroll inscription of Sam 136. Sir John Marshall explained tanuvae as the name of a locality, and M. Boyer 2 saw in it a form corresponding to Skr. tanuvyaya, while I³ interpreted it as the genitive of a female name Tanuva The new inscription shows that none of these explanations is likely to be correct. We do not know from which locality the Landi casket originally came, but it cannot have been the Bodhisattvagrha excavated by Sir John. An original tanuvyaya would become tanuvvaya, and the v could not have been dropped And, finally, tanwas must be the locative singular, and not the genitive of a female base, as proved by tanuayammi It seems necessary to explain tanuvaya, tanuaya as adjectives qualifying the locality where relics were deposited, and I therefore think that the word is derived from tanu and means "containing a tanu, a relic." I therefore translate the record as follows:

Anno, 20, the 20. day of the month Avadunaka, at this instant Svedavarman, the son of Yaśa, deposits a relic of the Adorable Śākyamum in the relic stūpa (erected by King M. .), the property of the Sarvāstivāda teachers — as it has been said by the Adorable one contingent on ignorance (are) the forces, contingent on the forces perception, contingent on perception name and form, contingent on name and form the six senses, contingent on the six senses contact, contingent on contact sensation, contingent on sensation thirst, contingent on thirst grasping, contingent on grasping existence, contingent on existence birth, contingent on birth age, death, sorrow, lamentation, misery, downcastness and despair Such is the origin of this entire mass of misery — in honour of all beings And this contingent origination has been written by Mahiphatika in honour of all beings

The record is of interest in more than one respect It falls within the reign of Kaniska, but we are not informed about the identity of the local ruler who held sway in the locality where the Stūpa was situated, nor about the position of this locality. The historical and geographical information which can be gleaned from the record is accordingly small.

¹ JRAS, 1914, 973 ff.

² JA, x₁, 1915, 281 ff

³ Ep. Ind., xiv, 288

We learn a little more about Buddhist literature in North-Western India about the middle of the second century A D. We knew before now that a version of the Dhammapada in a vernacular belonging to that part of the country existed in a comparatively early time. Now the Landi inscription brings what is evidently a quotation from another canonical work written in practically the same language. Have we a right to infer that extensive canonical texts in that form of speech were in existence? And with which Buddhist sect should they be connected? From the mention of the Sarvāstivādins in this as in other Kharoṣṭliī records, such as the Mathurā Lion Capital and the Shāh-jī kī Dherī casket, we might be inclined to think of them. But then we know that their canon was later written in Sanskrit. It may however be possible that they had, at the same or at an earlier period, also canonical books in the North-Western Prakrit. The Landi inscription raises this question afresh

Its chief interest, however, rests with the fact that it is comparatively long and thus allows us to judge about some features in the dialect.

We have every reason for assuming the existence of a fairly uniform language spoken in North-Western India in the Indo-Skythian period. It is represented by a number of Kharosthī inscriptions and also by the Kharosthī manuscript of the Dhammapada. Nobody has as yet attempted to give an exhaustive sketch of this form of speech, and it would not be possible to do so within the limited space of a contribution to a complimentary volume. But I should like to offer some remarks about such details which are further elucidated by the new inscription.

I said that the language is fairly uniform. That does not, however, exclude the existence of minor dialectic variations, and as a matter of fact such appear to exist both in inflexional forms and in phonetical features.

To the first class belongs the nominative singular of masculine a-bases. In the Dhammapada manuscript it regularly ends in o, which o is shown by the metre to be long. If we turn to Kharoṣthī inscriptions we find the same o-form in inscriptions hailing from the country to the east of the Indus, and also in those found about Mount Banj (Dewai, Kala Sang, Mount Banj, Shakardarra, Yākubi). In the West, on the other hand, in Āra, Zeda, Machai, Panjtar, Pāja, Peshawar, Chārsadda, Jamalgarhi, Loriyān Tangai, Bimaran, Hidda, we find e to be the termination. In the Wardak vase inscription we find yo amdajo, which might seem to point to o-forms, but the words are probably

neuter and not masculine, and a priori we should expect Khawat, where the vase was found, to belong to the e-group. The Landi inscription is also of the western variety, cf. samadae, that is, samadayah, D^{111} .

The new record contains quite a series of locatives ending in ammi-ksunammi A1, tannayammi B1, parigrahammi C1, thubammi D1. Similar forms are found in inscriptions hailing from Hidda, Wardak, Āra, Ohind, Panjtar, and also from Taxila, where the silver scroll of Sam 136 has gahami. In the Patika plate, on the other hand, we apparently have imasi in l. 5. This latter form is quite common in the Dhammapada manuscript, where we find forms such as asni loki parasa yi, in this world and the other one. The form asni in collocation with parasa, i.e., as shown by the metres parassi, shows that these forms are derived from such ending in asmi, just as is the case with the ammi forms. The manuscript shows that sm quite regularly became sv and further ss, thus snadi, Skr smīti A1v 2, Cro 42, tasa, Skr tasmāt, yasa, Skr yasmāt, O 16, sadana, Skr smītānām, Cro 43, etc. The change of sm to mh in samhasadi B 13 seems to belong to a different stratum.

Now the locative forms in mi, or rather, as shown by the writing mri in the Wardak Vase inscription, mhi, presuppose this very change, and one would be inclined to think that we are here again faced with dialect varieties within the North-Western vernacular. There are, however, some considerations which seem to make such an assumption unlikely. The locative in asi is apparently used in the Taxila plate of Patika of Sam 78, while the termination ami is found in the silver scroll of Sam 136 coming from the same locality Moreover forms such as ksunammi are of frequent occurrence in the dated Kharosthi records from Niya We cannot, accordingly, find any geographical delimitations of the spheres of each form. On the other hand it is difficult to think that one and the same termination asmi can sometimes become amhi and sometimes assi within the same period and in the same dialect. Moreover the change of asmi through asvi to assi seems to be in best agreement with the phonetical system of the North-Western tongue. We must therefore, I think, assume that the amhi forms are a later development of new asmi forms, reintroduced in the barbaric Sanskrit of another sect, at a time when sm no more became sv. ss. but mh.

 $^{^1}$ M Senart reads asmi, but the sign which means sv in svaga, 1e, svarga, O 5, cannot be transliterated otherwise than sv

² For the reason stated in the preceding footnote I cannot accept M Senart's reading smatr

There is also another feature where we are apparently justified in speaking of a phonetic development within the dialect. There has been, as is well known, some doubt about the distribution of the dental and the cerebral n in Kharoṣṭhī records. In the Aśoka inscriptions the two sounds are clearly distinguished, and also in later inscriptions the late Professor Būhler never confounded them in his transliteration. Several scholars, however, have been accustomed to transliterate both the n-letters as n, and M. Senart in his edition of the Dhammapada manuscript and Messrs. Boyer, Rapson and Senart in their Niya inscriptions use the dental n throughout. In my paper on the Kharoṣṭhī manuscript in the Festschrift Windisch, pp. 85 ff., I showed that n and n are, in the Dhammapada text, distinguished according to a definite rule, which is also traceable in a series of modern dialects every initial n and every doubled n remains as a dental, but every single uncompound n becomes n between vowels.

This seems to be an old characteristic of the dialect, and it can be traced in some Kharoṣṭhī inscriptions. We find the two n-sounds correctly, or approximately correctly distinguished in the Patika plate, where the exceptions to the rule, the words Panema and mahadanapati, can be explained as loan-words—in the Mānikyāla inscription of Saṃ 18^{-1} and the Shakardarra epigraph of Saṃ 40—But in most cases the rule is not observed—The Mathurā Lion Capital, the Hidda inscription and the record on the Kaniska casket use the dental n everywhere, both as initial and between vowels, just as the Landi casket. The case seems to be similar in the Ohind, Yākubi, Pālāṭū Dherī jars, and Jamālgarhī stone inscriptions, where no initial n occurs

On the other hand the Taxila silver scroll, the Dinarva and the Wardak Vase records use the cerebral n both as an initial and as medial, and the same letter is also in exclusive use in several epigraphs where there is no instance of an initial n—those from Tirath, Pāja, Takht-1-Bahi, Kaldarra, Panjtar, Dewai, Zeda, Machai, Kala Sang, Fatch Jang, Skārah Dherī, and others—In the Āra inscription the dental n occurs only in the proper name Kaniska.

Finally n and n seem to be used promiscuously in the same word dana. In the records from Chārsadda, Loriyan Tangai and Janliā, and also in the Kharosthī records from Niya and neighboring oases the distinction between the two sounds seems to have been largely discarded

¹ The form dadanayago can owe its n to the uncompound nayago, apanage can, in a similar way, be explained as alpanage, and etranana may be one word, the genitive plural of an adjective etrana, formed with the suffix ana from etra and having the same meaning as Skr atsatya

From this state of things we can draw only one inference: the difference between the two sounds was felt no more by those who drafted the inscriptions. If we now bear in mind that the oldest record where they are confounded, the Mathurā Lion Capital, is a Saka epigraph, and that the language of the Sakas or their Iranian cousins in Chinese Turkistan did not distinguish n and n as in the manuscript, we must, I think, infer that the phonetics of the North-Western dialect became modified in the mouth of the Indo-Skythians.

In such circumstances we might ask ourselves whether it would not be just as well to follow those eminent scholars who do not make any distinction in their transliteration of the two Kharosthī letters I do not think, however, that such a procedure is justified It would come to a suppression of evidence, and the history of the Dhammapada manuscript show show careful we must be in venturing on such undertakings.

With regard to the treatment of intervocalic stops some inference can be drawn from the forms occurring in the Landi inscription, which partly corroborate, partly modify the results derived from the Dhammapada manuscript

In the latter text an intervocalic k sometimes remains, is sometimes dropped and sometimes replaced by y Thus moyaka, Skr. mocaka, B 31, savaka, Skr. śrāvaka, A'v 4 ff., ujuo, Skr. rjuka, A'v 1, muya-madia, Skr. mrgamātrkā A'6, sagaraudasa, Skr. samkārakūte, Cro 3, ksīravayo, Skr. ksīrapāka, B 54.

It is difficult to think that all these writings correctly render the actual sound, and though the surrounding sounds may have something to do with the different representations, and though Sanskrit and other Prakrits may have exercised a certain influence, we should expect to find a fairly consistent treatment and be inclined to see in the different resulting letters various attempts at rendering a sound which was not covered by any of the usual aksaras of the alphabet.

It may be of interest to compare the treatment of intervocalic g in the manuscript, because we know the general Prakrit tendency to soften intervocalic surds. I abstract from a form such as bahojagaru, Skr. bahujāgara, A¹¹¹ 15, because the g of this word has also been preserved in other Prakrits. If we do so, it will be seen that the rule is that g in such position is written k. Thus nadakara, Skr. nadagara, A¹¹ 4; parakada, Skr. paragata, B 4, raka, Skr. raga, B 35; urako, Skr. uraga, B 41 ff.; vrkaya, Skr. vrgahya, B 42. In the word muyamadara,

¹ M Senart reads nalagara, but I have no doubt about the correctness of my own reading

Skr. $mrgam\bar{a}trk\bar{a}$, quoted above from A¹ 6 we have the same change to y as in the case of intervocalic k. In other words, intervocalic k and g are both treated in the same way.

If we now further compare forms such as idria, Skr. indriya, B 17; svihao, Skr. sprhayan, B 20, dhoreka, Skr. dhaureya, Cvo 31, udakavaya, Skr. udayavyaya, B 13, Cro 18, it will be seen that ancient intervocalic y seems to be confounded with intervocalic k^2 . We must, I think, infer that the sound in question was a spirant with a slightly pronounced guttural timbre

It is evidently the same sound which is intended by the writings kr in bhakravato, Skr bhagavatah; nakravata, Skr. $n\bar{a}garakasya$; samanumotakra, Skr samanumotaka, on the Mathurā Capital, and gr in bhagravata, bhagravatra, Skr bhagavatah, on the Bimaran Vase; gadigrena, Skr ghatikena; kadalayigra, Skr $krt\bar{a}layika$, natigramitrasambhatigrana, Skr $j\bar{n}\bar{a}tikamitrrsambhaktikanam$, etc., on the Wardak Vase.

The Landi casket furnishes several instances of the treatment of intervocalic k and g^3 . The state of things is evidently exactly the same as in the manuscript, except that the writing differs, gr having taken the place of k. The new inscription also shows that intervocalic g was pronounced in a similar way, just as was the case in the manuscript. Thus we find pracagra, Skr pratyaya, B' ff; uragrasa, Skr $up\bar{a}y\bar{a}sa$ C'', both in quotations from the Canon. It is evident that we are faced with a common feature in the enunciation of the North-Western language, at least of the form which had become used in Buddhist scriptures

With regard to stops we may still note the treatment of intervocalic p. It becomes v in namaruva, Skr $n\bar{a}mar\bar{u}pa$ C^{11} , just as in other Prakrits. In thubammi, Skr. $st\bar{u}pe$, D^1 , however, it is replaced by b. We might dismiss this form as a simple miswriting, if it were not for the fact that we also find it elsewhere, viz in the Hidda, Wardak and a Taxila copper-plate inscription, while the Mathurā Lion Capital, the Mānikyāla stone and the Sihila Vase have regular forms with v instead. It is therefore evident that there was a dialect from thuba in addition to thuva.

The form ruva shows that the different treatment cannot be due to

¹ M Senart's reading smihao cannot be upheld

 $^{^2}$ Cf also babaka, Skr $b\bar{a}lbaja$, C $^{\rm vo}$ 31, where the Pālı pabbaja is due to misunderstanding of an old babbaja

 $^{^3}$ Cf avadunakasa $A^i,\ Mahiphatiena\ A^{iv},\ šogra,\ Skr\ šoka,\ C^{iii},\ bhagravata\ A^{ii};$ bhagravatasa D^i

a difference in the surrounding sounds, because these are identical in $r\bar{u}pa$ and $st\bar{u}pa$. On the other hand b cannot well be explained as representing v, because the two sounds are carefully distinguished in Kharosthī

I cannot see more than one explanation of the form thuba: it represents thumba and is derived either from thumva or from thumpa, with the well-known substitution of a nasalization for a long vowel. The only question is whether the form has been derived from an older $th\bar{u}va$ or a $th\bar{u}pa$. Both explanations seem $a\ priori$ to be possible

We know that mv occasionally becomes mb in the North-Western dialect. Thus we find sambat śare, sambat śarae, for samvat sare in the Takht-i-Bāhī, Āra and Hidda epigraphs, but samvat sare in Sue Vihār, samvat sarays in the Patika and Pāja inscriptions. Similarly va, Skr. iva, regularly becomes ba after an $anusv\bar{a}ra$ in the Dhammapada manuscript. Thus siha ba, Skr. simham iva A^1 6, nadakara ba, Skr. $nad\bar{a}g\bar{a}ram$ iva, A^{11} A^{1} On the other hand mv becomes v, that is, probably a doubled nasalized v in forms such as savaso, Skr. $samv\bar{a}sa$ C^{vo} 37; savasi, Skr. samvaset, A^{11} 2.

If we examine the possibility of deriving thuba, that is, thumba from thūpa and not from thūra, we apparently have full justification for doing so in a prominent feature of the language of the Dhammapada manuscript, in which a nasal produces certain modifications in a following stop. The general rule is that voiceless stops become voiced, while voiced ones more or less coalesce with the nasal. The details are, as follows.

nk appears as g; thus alagido, Skr alamkrtah, B 39, sagapa, Skr. samkalpa, A¹¹ 5, etc. In the latter passage the metre shows that both the first and the second syllables are long. Sagapa accordingly stands for samgappa, in other words nk becomes ng. In the same way mkh becomes gh, that is, mgh, thus saghai, Skr. samkhyāya, B 27, saghara, Skr. samskārāh, A¹¹¹ 1ff.; ta gu, Skr. tam t

- ¹ It is evident that such features are of great importance for the interpretation of the text. Thus it is impossible to explain avalasa va A^{iii} 15 as representing abatasvam va, though the Päti text has abalassam va. The form avalasa must be the accusative plural, and the passage shows that the common source was written in a language where the accusative singular could not easily be distinguished from the same form of the plural in masculine a-bases, that is, the latter form ended in a nasalized a, as seems to have been the case already in Vedic dialects. Cf. Wackernagel, Altindische Grammatik I, (§ 279, ba)
- ² Here as in numerous other instances the metre shows that Sir George Grierson was not right in doubting the existence of doubled consonants in the North-Western Prakrit. See his paper in the JRAS, 1913, pp. 141 ff.

ig appears as an ordinary g, that is, as mg, in sagamu, Skr. samgrāmah, C^{ro} 6, where the r after q accounts for the preservation of the q. Also in kadıgaru, Pāli kalıngaro, Cvo 14, the ordinary q is used, but here ng seems to be derived from nk; cf. kadankara, Panini V. i. 69. In all other instances the letter q has been modified. In saga, Skr. sanga, B 3, 37, and in astagachadi, Skr. astamgacchanti, O 14, it is provided with a hook at the bottom, and in athagio, Skr astāngikah, A^{111} 4, there is a hook above the q. The result of old nq cannot, accordingly, be an ordinary mq. Similar hooks are, as we have already seen, used to mark an aspiration or a spirantic pronunciation, and we are therefore probably justified in inferring that a voiced guttural became spirantic after a nasal, the more so because ngh is treated in the same way. Thus we find sagha, that is, sampha, with a curve above q in A'v 6, and saght, with a hook to the right of the bottom in Cro 13; $\tilde{n}c$ becomes η , that is, $\tilde{n}\eta$, and $\tilde{n}\eta$ \tilde{n} , that is, $\tilde{n}\tilde{n}$, thus paja, Skr. pañca, B 37, kip, Skr kimcid, O 15, kuñaru, Skr. kuñjarah, A 5, 114; nd becomes n, that is, nn; thus dann, Skr danda, B 39, O 18, 28;

nt becomes d, that is, nd, and nd n, that is, nn; thus anadara, with long syllable before d, Skr. anantara, O 13; miyadi, Skr mriyante A¹¹¹ 12, nivinadi, Pāli nibbindati, A¹¹¹ 1, china, Skr chinda, B 37. Similarly ndh appears as nh, thus bamha, Skr. bandha, O 27; kanhana, Skr. skandhānām, B 13,

panidu, A¹¹¹ 16, where the metre proves the first syllable to be long;

mp becomes b; that is, mb, mb m, that is, mm, and mbh bh, that is, mbh, or mh, thus sabaśu, Skr sampaśyan, C^{vo} 26, anuabisa, Skr. anukampinah, C^{ro} 16, avaramu, Skr. apālambah, A^{vo} 2, udumaresu, Skr. udumbaresu, B 40, sabhamu, Skr sambhava, A^{vo} 2 f., O 17, ^{vo} gamhira, Skr. gambhīra, B 6. We would a priori be inclined to consider the latter orthograph the more correct one.

Now we naturally expect to find similar rules prevailing in the Kharoṣthī inscriptions of the Indo-Skythian period, the more so because M. Jules Bloch has been able to point to a parallel development in modern North-Western vernaculars ² An old thūpa might accordingly become thumpa and further thumba. In order to judge between the two possibilities it will, however, be necessary to examine the state of things in the North-Western inscriptions.

The materials for such an investigation are rather meagre, but, so far as I can see, decisive.

¹ The latter passage shows that M Senart's explanation of the word as representing Skr sambhrama cannot be accepted

² JA., x, xix, 1912, 331 ff.

We have already seen that Skr. $samsk\bar{a}ra$ appears as saghara, that is, $samgh\bar{a}ra$, in the manuscript, a form which shows that the modification of the guttural after a nasal is of more recent date than the development of the earlier sk to kh. The same word occurs, as we have seen, as samkara, with a vertical above k, in the Landi inscription. There does not, accordingly, here appear to be any trace of a softening after the nasal.

The only other instance of a guttural preceded by a nasal in the inscriptions is the word sampha and its derivatives, where everything points to the conclusion that ngh was pronounced as in Sanskrit.¹

If we turn to palatals, we find pamcame in the Patika plate; pam-[cada] se in the Pāja inscription, Rajula on the Mathurā Lion Capital.

Of cerebrals we have dadanayago in the Māṇikyāla inscription; a[m]dajo and avasadiga na, Skr $\bar{a}p\bar{a}s\bar{a}ndik\bar{a}n\bar{a}m$, on the Wardak Vase.

With reference to dentals we may compare puyayamto in the Patika plate; a[m]tara on the Wardak Vase, Balanamdi in the Sue Vihār plate, Dharmanadisa in Jauliā, k(h)amdhana Landi D^{iii} , and kadhavaro on the Mathurā Lion Capital, whether this form is derived from Skr. skandhāvāra or contains the word kantha, a town. The form Mumjanamda side by side with Mujavada on the Bimaran Vase is doubtful, the latter form being probably the correct one.

Of labials we have nirvanasambharas in the Hidda and sambhatigrana in the Wardak Vase inscription

It will be seen that nothing seems to point to a state of things similar to that of the manuscript. We must therefore abandon the explanation of thuba as representing thumba from thumpa, thūpa, and derive the form through thumva from thūva.

The preceding examination will have shown that the North-Western dialect is not absolutely uniform, and that the Dhammapada manuscript stands alone in its treatment of stops after nasals. The existence of corresponding features in modern North-Western vernaculars prevents us from simply ascribing the state of things in the manuscript to the influence of the old Iranian tongue of Chinese Turkistan, where we find identical rules prevailing But it is possible that this influence has been instrumental in regulating a tendency inherent in the dialect. In connection with the nominative in o and perhaps also the locative in assa such features will some day enable us to localize the Dhammapada dialect with greater precision within the territory once occupied by the North-Western Prakrit.

¹ Cf. samgharama in the Patika plate and on the Kanişka casket, saghasa, saghanama and mahasaghiana on the Mathurā Capital, etc

Such minor dialectic differences which may be traced in our materials are, however, of minor importance, and in one important feature all North-Western varieties agree and make the language stand out as a clearly defined individual Prakrit. in the treatment of old sibilants. The three s-sounds are distinguished throughout, and every attempt at interpreting a Kharosṭhī record which does not pay due attention to this fact is bound to be a failure ¹

In the manuscript we have some mistakes, owing to the fact that it is translated from a different dialect and probably written in a locality where the home tongue was an Iranian form of speech. Thus we find sa for sa in pacha sa, Skr paścāt sa Cro 39 (but correctly pacha su Ari 3), where the Iranian home tongue has sa, and saga for sanga B 3, 37, Fragm Cxxxviii, where I cannot give any satisfactory explanation. Similarly we always find suyi instead of śuyi for Skr śuci, where the original cannot have distinguished between the different s-sounds, so that the translator was led astray and connected suci with the prefix su. That the original did not distinguish the dental from the palatal s is evident from the etymological play in samairya śramano di vucadi, O 16, which is meaningless in a dialect which distinguishes s and ś.

The Landi inscription again shows that the three s-sounds are carefully distinguished.² It also corroborates certain inferences about the changes undergone by certain compounds containing a sibilant, which can be drawn from the manuscript and other inscriptions.

There are no instances in the record of the compound \acute{sr} , but we know from other sources that it became s or rather ss, thus sameno, Skr. $\acute{s}ramanah$, B 39, and similar forms in several other passages and in inscriptions. Writings such as $\acute{S}ravanasa$ in the Pāja, Kaldarra and Panjtar records are Sanskritisms. The corresponding change of $r\acute{s}$ to $\~{s}$, ss, on the other hand, which we know from forms such as phusamu Skr. $spr\acute{s}āmah$, B 25; phasai, Skr. $spr\acute{s}ati$, A¹¹¹ 10, etc., is illustrated by the form phasa, Skr $spar\acute{s}a$, D¹¹.

Of compounds containing an old s we have perhaps the well-known change of sy to s in isa A^1 , if this common form contains the pronominal base i and the element sya. Sn becomes s in the manuscript. I have

¹ Eg, the attempt made by some eminent scholars at explaining the aksaras which I read ya yetiga in 1 5 of the Wardak inscription as sasetiga and further as samsvedaja. Such a development is entirely against the dialect

² Cf Sakyamunisa sarira Dif, sadayadana Ciif, sarvartivadana Ci, etc.

³ Cf tasa, Skr trsnā, B 45.

already mentioned the corresponding tas(h)a in the Landi inscription, A^{111} , which seems to show that the resulting s was slightly aspirated.

Of s-compounds we have sk in samk(h)ara B^{11} ; k(h)amdhasa D^{11} ; st in sarvartivadana C^{1} ; thubammi D^{1} , pradithavedi A^{11} ; sy in masasa avadunakasa A^{1} , etc. The form dormanasta in C^{111} cannot, accordingly, be derived from daurmanasya but must contain the suffix $t\bar{a}$.

On the whole the Landi inscription is of considerable importance for our knowledge of the North-Western Prakrit and also of the history of the Buddhist Canon, and a preliminary account may, I hope, interest my distinguished American colleague and friend, to whom this volume is dedicated.

University of Oslo

DAS VIPĀNAM IM RIGVEDA

By KARL F GELDNER

ES IST ein allgemeiner Glaube der Inder, dass gewisse Vogel—es werden der Kruñc (eine Reiherart) und besonders der Hamsa (Schwan und indische Gans) genannt—die Gesehiekhehkeit besitzen, aus einer Misehung von Wasser und Mileh die Milch allein als das Bessere herauszusehlurfen und das Wasser ubrig zu lassen. Diese Fabel, denn etwas anderes ist es nieht, obwohl irgendeine reale Beobachtung zu Grunde liegen mag, diente Dichtern und Philosophen oftmals als Gleiehnis In einem ebenso feinsinnigen wie gelehrten Aufsatz im Journal of the American Oriental Society xix, 2, 151–158 sucht der Jubilar, Professor Lanman, diese Fabel auf ein naturliehes Faktum zurückzuführen, und er verfolgt ihre Spur durch die ganze Literatur ruckwarts bis in die Zeit der vedisehen Schriften Nur vor der allerletzten Pforte, vor dem Rigveda macht er Halt und verweist auf die Autoritat Bloomfields

In der alten Literatur wird diese fabelhafte Kunst, Milch aus dem Wasser herauszutrinken, durch vi-pā und vipāna ausgedruckt. vi-pā bedeutet zunachst mit Unterschied trinken, im Trinken einen Unterschied herausfinden, so Ait Br. 3, 29, 5, oder die Essenz von etwas trinken, wie RV 3, 53, 10 vi pibadhvam kuśikāh somyám mádhu Dort geht im ersten Stollen der Vergleich mit den Hamsas voraus und derselbe Vergleich schwebte vermutlieh auch im letzen Stollen bei vi pibadhvam dem Diehter noch vor

In 7, 22, 4 wird dasselbe Verb figurlieh vom Presstein gebraucht, der Somapflanze und Somasaft seheidet, letzteren gleichsam aus der Pflanze heraustrinkt Und darnach ist auch 4, 16, 3 zu verstehen. Die wiehtigste Stelle ist aber 10, 131, 4-5

```
yuvám surámam aśvinā námucāv āsuré sácā /
vipipānā śubhas patī indram kármasv āvatam //
putrám wa pitárāv aśvinobhéndrāváthuh kāvyair damsánābhih /
yát surámam vy ápibah śácībhih sárasvatī tvā maghavann abhisnak //
```

Es steht fest, das diese beiden Strophen in enger Beziehung zur sogenannten Sautrāmaṇī-Feier stehen, bei der statt Soma vielmehr die Surā, d. h. der Branntwein eine Rolle spielt Beide Strophen haben nach Āśv. Śs. 3, 9, 3 in dem genannten Ritual ihre feste Stelle. Damit ist aber nicht gesagt, dass sie schon von vornherein fur dieses gedichtet

seien, wie Oldenberg annimmt. Sie sind vielmehr aus dem RV. in das spatere Ceremoniell ubernommen worden, weil sie auf eine alte Sage anspielen, an der sich jenes Ceremoniell anrankt. In dieser Sage kommt eben der Surä eine besondere Bedeutung zu. Durch die Anlehnung an das RVLied hat jenes Opfer von dem dort in Str 6 genannten indrah suträmä seinen Namen erhalten Im RV. aber steht das Strophenpaar in anderem Zusammenhang Das Lied beginnt mit der Bitte um Schutz gegen Feinde (1) und um Verteilung von deren Besitz (2). Dazu muss man Indra zum Freund liaben (3) — diese Freundschaft des Indra wird A V 3, 3, 2 in Verbindung mit der Sauträmanī erwahnt — wie Indra selbst in dem Namuci-Handel an der Freundschaft der Aśvin und der Sarasvatī einen Halt fand (4-5)

Die Sage, welche die Ritualtexte zur Begrundung des Sauträmani-Opfers mitteilen, ist der Kampf zwischen Gott Indra und dem Damon Namuci Die ausfuhrliche Darstellung dieses Mythos in Sat Br. 12, 7, 1fg. verknupft die Namucisage unmittelbar mit dem ebenso bekannten Konflikt der beiden Gotter Indra und Tvastar, nach der Ermordung des Tvastarsolines Viśvarūpa durch Indra Ob diese Verknupfung alt ist, mag dahingestellt bleiben Tvastar bruskiert Indra, dieser begeht in Erwiderung ein Sakrilegium und busst zur Strafe seine unbezwingliche Kraft ein Gerade in diese Zeit seiner Schwache fallen seine Handel mit Namuci Der Damon merkt, das Indra sich noch nicht erholt hat (Sat Br 12, 7, 1, 10) und beschliesst den Indra jetzt ganz zu Fall zu bringen, indem er durch Branntwein seine Krafte und seinen Somatrunk wegnimint (ib 12, 7, 1, 10, 12, 7, 3, 1) Indra erleidet einen volligen Zusammenbruch und unterliegt im Ringkampf gegen Namuci Er muss sich infolge des Betrugs zu jenem Entwaffnungs- und Sicherheitspakt verstehen, der auch in TBr 1, 7, 1, 6fg. genau erzahlt wird Die Gotter wenden sich an die Asvin als Arzte und die Sarasvatī als das Heilmittel mit der Bitte, ihn zu heilen (Sat. Br 12, 7, 1, 11) und ihm die verlorene Kraft und den Soniatrunk wiederzubringen (ib 12, 7, 3, 1) Bei diesem Punkt scheinen nun die oben zitierten Strophen des RV einzusetzen

Das Sat. Br crzahlt 12, 7, 3, 3fg den weiteren Verlauf der Geschichte, den Ersatz des im Vertrag verbotenen Vajra Indras durch Schaum. Indra schlagt darauf dem Namuei das Haupt ab. Dadurch wurde und blieb der von Namuei weggetrunkene Soma mit Blut vermischt. Die Gotter (Indra, die Aśvin, Sarasvatī) ekelten sich davor und erfanden das andhasor vipānam, das Sondertrinken der beiden Flussigkeiten, und machten auf diese Weise den Soma wieder rein und schmackhaft.

Das ganze Material der Namucisage hat in unerreichbarer Grundlichkeit Bloomfield im JAOS. 15, 146fg zusammengestellt und kritisch beleuchtet. Ich pflichte Bloomfield darin durchaus bei, dass das Schlagwort surayā der Brāhmaṇastelle (Sat Br. 12, 7, 1, 10, vgl. 12, 7, 3, 1) nicht zu übersetzen ist: zusammen mit dem Branntwein, sondern: mit Hilfe des Branntweins. Namuci macht den Indra durch dieses ihm ungewohnte Getrank total betrunken

Wenn dann weiter (a o o. 153) Bloomfield den Satz aufstellt, dass die Gesamtheit der vedischen Bucher eine Einheit bildet und stets die Brähmanas und Sütras sowie das gesammte rituelle Spruchmaterial für die Erklarung der vedischen Hymnen heranzuziehen ist, so wird jeder Verstandige diesen Satz im allgemeinen billigen. Bloomfields Arbeiten sind in dieser Hinsicht geradezu vorbildlich. Aber auf mythologischem Gebiet darf dieser Satz doch nur eum grano salis gelten. Die mythischen Erzählungen der Brähmanas sind Epigonenarbeit, die zwar meist noch den Kern des Mythos richtig erfasst, im Einzelnen aber vieles missdeutet oder umdeutet. Der Rigveda steht sagengeschichtlich betrachtet auf alterer und hoherer Stufe. Die Gottergeschichten lebten in dem Gedächtnis der Dichter noch gestalt-und gehaltvoller als bei den Epigonen. Nur schade, dass diese aus ihrer intimeren Kenntnis so sparliche und abgerissene Mitteilungen machen. Die Namueisage des RV ist ein weiteres Beispiel hierfur.

Bloomfield verlegt nun Rv. 10, 131, 4 in den Schlussakt der Namucigeschichte, wobei er sich ganz an den Gang der Erzahlung im Brähmana anschliesst. Deren einzelne Phasen sind; 1 Surärausch des Indra und Verlust seiner Starke; 2. Pakt mit Namuci Wiederherstellung Indras durch die Aśvin und Sarasvatī, und Umgehung des Vertrags und Totung des Namuci, 3 Zuruckgewinnung des weggenommenen Soma und dessen Reinigung durch die Sarasvatī Bloomfield kann sich dabei besonders auf Mahīdharas kurze Analyse der Sage in dessen Kommentar zu VS 10, 33 berufen.

Die hauptsachliche erux interpretum bleibt das nur in den beiden RV. Strophen belegbare Wort $sur \dot{a}mam$. Bloomfield nimmt Roths spatere Deutung im kurzeren Petersburger WB. an. Nach Roth ist sur \(\text{a}ma \) Kompositum aus $sur \dot{a} + \dot{a}ma = \text{Sur} \dot{a} k \text{rankheit}$, die \(\text{ublen} \) Folgen des zu starken Branntweingenusses. Und zwar bezieht Bl. diesen sur \(\text{a}ma \) in der einen Str. auf den ersten Akt der Namucisage, in der anderen aber auf deren Schlussakt, und ubersetzt (a. a. o. 148):

"Ihr beiden Aśvin habt, indem ihr bei Āsura Namuci euch selbst eine Surā-Uberladung antrankt, dem Indra bei seinen Taten geholfen, ihr Herren des Lichtes." "Wie Eltern dem Kind so haben beide Aśvin, o Indra, dir mit ihren Zauberkunsten geholfen. Als du, o Maghavan, mit aller Macht Surā bis zur Erkrankung getrunken hattest, da kurierete dich Sarasvatī."

Nach Bloomfield handelt es sich eigentlich um zwei verschiedene Vorgange. Indra trinkt sich unabsichtlich bei Namuci einen bösen Rausch an in Surā, die ihm sein Trinkgenosse Namuci im Beginn der Geschichte beigebracht hat. Die Aśvin tun dasselbe absichtlich, um den im toten Namuci verunreinigten Soma zu reinigen, und ihn so dem Indra wiederzugeben (a a o. 159, Mahīdhara zu VS. 10, 33). Daher, so meint Bl., steht vi- $p\bar{a}$ das eine Mal im Med. das andere Mal im Akt. Der Unterschied zwischen Med und Akt ist aber lediglich durch die verschiedene Konjugation bedingt vi- $p\bar{a}$ nach der seltenen Präs. Klasse 3 ist Med, vgl $vipip\bar{i}ya$, $vipip\bar{i}te$ Jaim. Br. 3, 228, dagegen ist vi- $p\bar{a}$ nach Kl 1 (piba) ausser RV. 3, 53, 10 stets Akt.

Hart ist auch das Auseinanderreissen der beiden Vorgange in den zusammenhangenden RV. Str und die Beziehung der Worte námucāv āsuré sácā, auf den toten Namuci, wahrend der Lok. bei sácā in Verbindung mit pā und ähnlichen Verben stets den Gast- und Opfergeber bezeichnet píba — túgrye sácā 8, 32, 20, śrústigau sácā 8, 51, 1; āyáu mādayase sácā 8, 52, 1, kýpe mādáyase sácā 8, 4, 2, kánresu sú sácā píba 8, 4, 3 Der Fehler aller Interpreten ist eben in vipipānā, vyápibah zu suchen, das nichts anderes ist als das spatere vi-pā Das hat schon Oldenberg (Nachr der Gottinger Ges. 1893, 343) geahnt, ohne klar zu sagen, wie er die Stelle verstanden haben will Als Schlagwort der Namucisage wird es ausdrucklich in Sat 12, 7, 3, 4 durch andhasor vipānam bezeugt, ist aber in der spateren Fassung der Sage nur noch halbverstanden und an die falsche Stelle gekommen Das andhasor vipānam in Sat. ist dasselbe wie andhaso vipānam Tānd Br. 14, 11, 26, wo wohl gleichfalls andhasor zu lesen ist. Dazu bestätigend andhasī vipipīte Jaim Br. 3, 228. Die beiden andhas sind nach der letzten Stelle das dawyam und das mānusam, also jedenfalls Soma und Surā. Und so ursprunglich auch in der Namucisage.

Damit fallt aber Roths geistvolle Deutung von surāma. Surāmam bezeichnet jene eigentümliche Mischung von Soma und Surā, die Namuci dem Indra vorsetzte, und die in Erinnerung an jene Sage im spateren Ritual nachgeahmt wurde, VS. 19, 1 (he sure, tvām somena samyojayāmi Mahīdhara). Auch das hat Oldenbergs Scharfsinn (a. a. o. 343) herausgefunden, aber seine Deutung des Wortes ist verfehlt. Um zu einem brauchbaren Sinn zu gelangen bietet sich eine doppelte Erklärung. Es kann aus surā + ama zusammengesetzt also Bahuvrīhi sein: die heftige Wirkung des Branntweins habend, durch Branntwein

stark gemacht, vulgar 'geschnapst.' Dann ist somam zu ergänzen. Man kann in diesem Falle sura-ama oder surā-áma zerlegen. Ersteres nach Wackernagel II, 1, § 113b β , letztes nach § 115c. Oder surāma ist kollektiver Dvandva und eine Kürzung aus surāsoma, das dann dem andhasī entsprechen wurde Diese Erklarung kommt der von J. Brune bei Oldenberg zu RV. 10, 131, 4 vorgeschlagenen nahe. Nunmehr übersetze ich:

10, 131, 4: "Ihr Aśvin habt bei dem asurischen Namuci den starkgeschnapsten (Soma) durch Trinken geschieden, ihr Herren der Schönheit, und so dem Indra bei seinen Taten beigestanden."

"Wie die Eltern dem Sohne so standet ihr Aśvin (dir), o Indra, bei mit euren Erfindungen und Meisterkunsten; als du mit Geschick den starkgeschnapsten (Soma) durch Trinken sondertest, da heilte dich, Maghavan, die Sarasvatī"

Die Strophen spielen auf eine Episode im Namuci-Indra-Streite an, die sich im RV. sonst nicht wiederfindet und aus eigener Kombination oder Phantasie, wie man es nennen will, vervollstandigt werden muss. Es fragt sich zunachst, wo diese Episode im Zusammenhang der ganzen Namucicrzahlung einzuordnen sei Doch wohl vor der eigentlichen Katastrophe, ungefahr bei Sat 12, 7, 1, 11–12, da wo die Aśvin und Sarasvatī zum ersten Male angerufen werden, aber noch vor dem volligen Zusammenbruch des Indra

Gottergeschichten sind nur das Spiegelbild menschlicher Verhaltnisse Indra und Namuci, der starkste Gott und der starkste Asura seiner Zeit, zwei grosse Rivalen und innerlich spinnefeind, versuchten zunächst sich auf diplomatischem und gesellschaftlichem Tone ausserlich gut zu stellen Jedenfalls haben nicht nur die Kommentare sondern auch das Epos recht, wenn sie von der Freundschaft beider sprechen (s Bloomfield a a o. 147). Sie luden sich zu Gast und Namuci versuchte dem Indra durch Alkohol ein Bein zu stellen, indem er in den Soma den Branntwein mischte, in das gottliche Getrank das damonische. Die List gelang nicht sofort Die gottlichen Wundermanner, die Asvin, machten dem Indra die Kunst vor, aus der Trankmischung den Soma allein herauszutrinken (Str 4). Indra tut das Gleiche, tauscht also den Namuci und Sarasvatī heilt die üblen Folgen (Str. 5). Wie es schliesslich doch noch zur Katastrophe kam, bleibt dann eine ungeloste Frage. Es ware darum in engerem Anschluss an die Brāhmanaerzahlung, auch moglich, dass Indra gleich anfangs dem listigen Gifttrank des Namuci erlag, und dass dieser nicht nur einc bestimmte Somalibation, sondern den Somatrank uberhaupt mit Surä vergiftet hatte, die Aśvin aber nach der Rekreierung Indras durch

Sarasvatī diesem vor dem entscheidenden Kampfe die Kunst des Vipāna beigebracht haben. Denn für diesen Entscheidungskampf brauchte Indra seine volle Starke und den Soma. Dann bleibt aber der Ausdruck námucau sácā hart. Klarheit ist nicht mehr zu erreichen.

Zum Andenken an dieses bedeutsame Ereignis, an die Rekreierung Indras und die Reinigung des Soma wurde die Sautrāmanīfeier gestiftet als ein Reinigungsopfer, das besonders von einem entthronten Konig (Kāty Śr 19, 1, 3) zu begehen ist und von einem, der sich in Soma ubernommen (ib 2), also modern ausgedruckt, sich eine Alkoholvergiftung zugezogen hat.

UNIVERSITAT, MARBURG.

ON THE REAL MEANING OF THE DIALOGUE BETWEEN YAJÑAVALKYA AND MAITREYÎ

By CARLO FORMICHI

EVEN a superficial reader of the *Upanishads* knows the famous dialogue between Yâjñavalkya and his wife Maitreyî and is ready to quote it as one of the loftiest passages in the whole religious literature of ancient India—But the meaning of the sage's words is far from being clear "Behold, not indeed for the husband's sake the husband is dear, but for the sake of the self, the husband is dear—Behold, not indeed for the wife's sake the wife is dear, but for the sake of the self, the wife is dear. Behold, not for the sons' sake the sons are dear, but for the sake of the self the sons are dear." And so on, in the text the thought is emphasized that everything dear to us as property, brahmanical or *kshatriya* dignity, heavenly worlds, Gods and creatures are not dear in and for themselves but only for the sake of the self.¹

Two such distinguished and authoritative interpreters as Deussen and Oldenberg are at variance in the rendering of the meaning of the text. The former states "dies ist nicht etwa die Proklamation des Standpunktes eines extremen Egoismus, sondern bedeutet (da der Atman das erkennende Subjekt in uns ist), dass wir alles in der Welt nur insofern erkennen, besitzen, lieben konnen, als wir es als Vorstellung in unserm Bewusstsein tragen "2"

Quite opposite to this explanation is the one given by Oldenberg. "wir lieben, sagt Yâjñavalkya, in Wahrheit allein unser Selbst alle andre Liebe fliesst aus dieser Liebe und dient ihr wobei das in der Tat deutlich genug ausgesprochene Bekenntnis zur Selbstliebe doch wohl aufgefasst werden darf als vertieft durch den mitklingenden Gedanken, dass das eigne Selbst das Allselbst ist " ³

I think that great help may be drawn from the following passages

"The âtman is dearer than a son, dearer than wealth, dearer than any other thing, because what is inmost is the âtman, and whosoever, to one saying anything else is dearer than the âtman, declares "you will lose

¹ Brhadâranyaka-Upanishad, II, 4, 5, IV, 5, 6

² Sechzig Upanishad's des Veda, p. 415

³ Die Lehre der Upanishaden und die Anfange des Buddhismus, p. 197

this your dear thing," he lordly proclaims what will necessarily happen. Therefore one should worship as dear only the âtman, for who worships as dear only the âtman to him no dear thing is any longer perishable." ¹

"When brâhmanas know the âtman, then freeing themselves from the desire of offspring, from the desire of wealth, from the desire of heavenly worlds, they lead the life of wandering mendicants, for desire of offspring means desire of wealth and desire of wealth means desire of heavenly worlds" ²

"Who knows the âtman becomes a *Muni* and wanders about in search of Him alone as in search of his own world. This is why the former sages did not desire offspring and said to themselves "what is the use of offspring to us for whom the âtman is the whole world?" Freeing themselves from the desire of offspring, from the desire of wealth, from the desire of heavenly worlds, they led the life of wandering mendicants, for desire of offspring means desire of wealth and desire of wealth means desire of heavenly worlds."

Yâjñavalkya, who has known what the âtman is, gives up all mundane affections and resolves to lead the life of a wandering mendicant. What he says to his wife is a truisin that is constantly met with in the *Upanishads* there is only one reality, and this is the indescribable, transcendent âtman which knows no change, no sorrow, no death, no to-day, no to-morrow, no here no there, and he who for the sake of this one reality forsakes the world and its illusions will transform all perishable things dear to his heart into unperishable ones

I agree with Oldenberg that in Yâjñavalkya's words there is no trace of the âtman being das Subject des Erkennens and as such der Trager dieser ganzen Welt, as Deussen maintains, but at the same time Oldenberg's assertion that, according to Yâjñavalkya, we love only our self and every other love flows out from this love, seems to me strongly objectionable. At any rate, Yâjñavalkya's acknowledgment of selfishness would be a most strange one. Can a man be called selfish for renouncing the world, living on alms and aspiring to a supreme reality which, though not personified, appeals to his heart as strongly as any personal God to the hearts of his worshippers? In the Upanishads the word âtman always means something that is even above the Gods, and to attach to it the idea of selfishness is to forget what the Upanishads try constantly to demonstrate, the ineffable transcendency of the âtman.

¹ Brhadâr Up I, 4, 8

² Ibidem, III, 5, 1.

³ Ibidem, IV, 4, 22

There is, accordingly, no relation at all between Yājñavalkya's expressions and those contained in the Samyutta Nikâya, I, 75, where to the question, "Is anything dearer to you than your own self?" twice, "No" is given as answer.

No religion has hitherto dared to acknowledge selfishness as its basis, and the Upanishads make no exception to the general rule.

Oldenberg, op cit, p 351, n 124

THE DATE OF VASUBANDHU, THE GREAT BUDDHIST PHILOSOPHER

By JYAN TAKAKUSU

TT is more than twenty years ago that I proposed a probable date for L Vasubandhu, the author of the Abhidharma-kośa (realism) as well as of the Vijnanamatrata (idealism), in the Journal of the Royal Asiatic Society (January, 1905) The date of Vasubandhu then proposed by me was A D 420-500. M Sylvain Lévi at first proposed a later date than mine, namely, the first half of the sixth century He has, however, since abandoned that date, in his translation of the Sūtra-alankāra, published in 1911, and has expressed his view that Asanga's activity covers the whole of the first half of the fifth century As in those days literary activities in India seem to have been at once reflected in China, the dates of the Chinese translations of Indian works will serve as a reliable guide in fixing dates in Indian religious or philosophical history Acting upon this conviction, I first published a translation of Paramārtha's Life of Vasubandhu, and, as an appendix to it, Kuei Chi's version of the controversy between the Buddhist and the Sānkhya philosophers in the T'oung Pao (1904), and subsequently proposed in 1905 the date just mentioned

Since then several scholars have taken up this question. Our lamented friend M. N. Peri, after a minute investigation, suggested a d. 350 as the date of Vasubandhu's death, while Professor U. Wogihara proposed a d. 390–470 for Vasubandhu, and a d. 375–450 for Asanga. In the meantime the dates were vigorously discussed by several scholars in Japan. Professor B. Shiio proposed a still more early date (A d. 270–350) than that of M. Peri, whereas Professor R. Hikata satisfied himself with the date given by Professor Wogihara.

Only lately Professor T Kimura, taking a different basis of discussion for his investigation, confirmed the date given by me. Still later, Professor H Ui, while discussing the existence of a philosopher called Maitreya besides the would-be Buddha of that name, sheds a side-light on the dark points of several important questions, though

^{1 &}quot;A propos de la Date de Vasubandhu," Bulletin de l'École Française d'extrême Orient (1911), p. 339

² Asanga's Bodhısattvabhūmı, ein dogmatischer Text der Nordbuddhisten. Leipzig, 1908

his own date for Vasubandhu is A.D. 320-400, or one hundred years There are yet several other savants standing at earlier than mine opposite poles, the one being Professor S. Funabashi, who advocates the earlier date (fourth century, before Kumārajīva), and the other, the group including Professor E. Maveda (after Kumārajīva, who was in China 383-414), Professor S Mochizuki (between 433-533), and G Ono (415-515), who favors a later date, somewhat later than even Now we can well draw our discussions to a conclusion, as we have almost exhausted our examination of the materials at our Besides, we may perhaps look forward to some fresh internal evidence, now that new material has been discovered in Nepal and is being prepared for publication by M Sylvain Lévi the Sanskrit text of Vasubandhu's Vijnaptitrimśaka, with Sthiramati's commentary on it As for ourselves we shall now sum up our studies and see if we can settle the question once for all

My arguments rest chiefly on evidence adduced, first, from some Chinese biographers, secondly, from travellers from or in India, and especially from the life of Vasubandu written by Paramārtha, and thirdly from the dates of translation of the works of Vasubandhu and his contemporaries

- 1 Kumārajīva (383–414 m China), who wrote or translated the biographies of Aśvaghosa, Nāgārjuna, and Āryadeva, did not write the life of Vasubandhu, though one catalogue mentions by mistake the life of Vasubandhu
- 2. Fa hien (399-414 in India) does not seem to know of our philosopher, none of whose works is found among his translations
- 3. Paramārtha (500–569, 539 invited from India, 546–569 in China) is the first who wrote a biography of our philosopher. He himself is an idealist philosopher and mentions the death of his predecessor at the age of eighty, at Ayodhyā, which must have occurred before 539 (the date of invitation to China), or, at the latest, before 546 (the date of his arrival in China). This fact alone made M. Sylvain Lévi's first proposal impossible. Besides, Vasubandhu's Mahāyānistic works, which were written in the last part of his life, are subsequent to his conversion to the Mahāyāna and the death of Asanga, which occurred at the age of seventy-five. If his elder brother was seventy-five, his age would be about seventy or more. During about ten years of his conversion, he seems to have written nineteen works as I pointed out in my Life. Some may hold the ten years as incredible, but as he said himself that he was too old to dispute with Saṅghabhadra while he was as yet Hīnayānist, the remaining years of his life could not have

been much more than a decade. Many of his works were translated into Chinese as early as 508, 509, 508-511, 508-538, 529, 550, 563, and by Bodhiruci (A D 508-535 in China), Paramārtha (A.D 546-569 in China), and others The compilation of these works was naturally earlier than the dates of translation

I thought it quite reasonable to take A D 500 as terminus ad quem and to fix his date as covering three quarters of the fifth century. Consequently A.D 420–500 was proposed as a possible date for Vasubandhu This hypothesis of mine does not conflict with any date from the Life itself, namely, a controversy between the Buddhist and the Sānkhya philosophers (Buddhamitra versus Vindhyavāsa (Īśvarakṛṣṇa), a patronage of the King Vikramāditya and Balāditya, a dispute with Vasurata, a grammarian of the Candra school, also with Sanghabhadra, Vaibhāsika philosopher and the author of the Samayapradīpika. Paramārtha's date given for Kātyāyanīputra and Aśvaghosa is "in the 500 years of Nirvāna" (that is, 500–599), while that given for Vārśaganya and Vindhyavāsa (Īśvarakṛṣṇa), the elder contemporaries of Vasubandhu, is "in the 900 years of Nirvāṇa" (that is, 900–999) These two dates too are not made impossible by any statement in the Abhidharma-kośa itself

In the Abhidharma-kośa it is said "When we know that the life of the Buddha's Law is about to end, reaching almost the throat, and that it is the time when vice is in power, seek your deliverance, be diligent" This would mean that the life of the Buddha śāsana, which lasts for 1,000 years, is about to breathe its last. According to Yasomitra. the original is Eram kanthagataprānam viditrā muniśāsanam, malānām balakātam ca na pramādyam mumuksubhih ("It being known that the life breath of the teaching of the sage [is about to go out and reached to the throat and it is the prevailing time of vices, those who seek deliverance should be diligent") The Vyākhyā of Yasomitra does not explain it But Hiuen tsang's explanation puts the duration of the saddharma as definitely one thousand years We can thus assume that we are nearing the end of the period, that is to say, we have passed nine hundred years and more since the Buddha's This is in perfect agreement with Paraniartha's statement "in the nine hundred years," which means neither "within nine centuries" nor "in the ninth century" We may better express it as "in the years nine hundreds," that is, from 900 onward till it reaches 1.000.

¹ L'Abhidharmakosa de Vasubandhu, traduit et annoté, by Professor de la Vallée Poussin (1925), chap. viii, 40, p 224, note 1

Now as to the calculation of the Nirvāṇa Era. That a comparatively trustworthy tradition as to the date of the Buddha's Nirvāṇa was current in India among the Buddhists about Paramārtha's time can be seen from another source, quite independent of Paramārtha's Life The famous "Dotted Record" of Indian sages, which was brought to China by Saṅghabhadra, indicated 975 dots from the Nirvāṇa to AD 489, one dot having been added every year to the Vinaya pitaka after the Varṣa ceremony was over

Sanghabhadra translated Buddhaghosa's Samantapāsādīkā in A D 489 in Canton, and kept his Varsa retreat there, thereby adding the last dot to the Record According to this Record, the date of the Nirvāna would be B C 486 ¹ The 500 years after Nirvāna as the date of Aśvaghosa would mean some time falling between A D 14 and A D 113, while the 900 years after Nirvāna as the date of Vasubandhu would fall somewhere in A D 414–513 This is an additional corroboration which cannot be rejected without some incontrovertible fact

Now M Peri took up all the books of a dubious nature, which I purposely rejected as such, and proposed an earlier date for Vasubandhu His arguments are divided into eight heads (1) Bodhiruci and Chin kang sien lun, (2) the list of patriarchs, (3) the Mahāyānaavatāra and Sthiramati, (4) Chronology, (5) the Sata śāstra, (6) Bodhicittotpāda śāstra, (7) Kumārajīva; and (8) Disciples and commentators of Vasubandhu These titles alone seem to indicate that he has exhausted nearly all evidence that can be adduced from the Chinese side Though his painstaking research incorporates many of the discussions then going on in Japan, and is marked everywhere with a high scholarship in Japanese as well as Chinese Buddhist literature, nevertheless there are no points, I ain sorry to say, which really compel us to accept his date

For my part I have been trying for some time to carry on anew my research into the materials hitherto not sufficiently examined by myself. The deeper I go into the matter, the more I feel convinced that, after all, my date of Vasubandhu is nearest the mark. So instead of laying a lengthy discussion before my readers, I shall confine myself to giving a few important points that tend to undermine the foundation of all earlier dates proposed for Vasubandhu. Among others there are three important facts on which the proposition of earlier dates is based and in face of which my date seems to fall to the ground at once

 $^{^1}$ For the details of the Dotted Record, see my "Palı Elements in Chinese Buddhism," $J\ R\ A\ S$, July, 1896

First, the Chin kang sien lun, a work on the Vajracchedikā, either translated or written by Bodhiruci (A D. 508-535), which M. Peri, Professors Shiio and Ui make very much of Secondly, the Bodhisattva-bhūmy-ādhāra, a portion of the Yogācāra-bhūmi, translated by Dharmarakṣa (A.D 414-421), along with the Bodhisattva-bhadraśīla, also a portion of the Yogācāra-bhūmi, translated by Guṇavarman (A D. 421), on both of which the arguments of Professors Wogihara. Shiio, and Hikata are based To the same category belongs the Sūtrālankāra, said to be composed by Asanga, the original of which was published by Professor Sylvain Lévi, who based upon it a new date for Asanga. Thirdly the Samyukta-abhidharma-hrdaya, by Dharmatrāta, translated by Sanghavarman (A D 424). The name of Vasubandhu contained in the work was and is still a centre of dispute, especially among the Japanese savants

Let us now examine these points First as to the Chin kang sien The work is said to be a commentary on the Vajracchedikā, written by a man named Chin kang sien (perhaps Vajrarsi in Sanskrit), who is supposed to have been a pupil of Vasubandhu, and translated into Chinese by Bodhiruci (A D 535) At the end of volume 10 of this work there is a paramparā of transmission to the following effect. 1 "Maitreva composed a commentary on the Vajracchedikā and the Bodhisattva-bhūmy-ādhāra, and handed them down to Asanga, who in transmitted them to Vasubandhu. The latter again wrote a subcommentary on the Vajracchedikā, and handed it down to Chin kang sien (perhaps Vajrarsi) Then Chin kang sien to Wu tsin yi (Aksayamati), Wu tsın yi to Cheng tsi, Cheng tsi to Bodhiruci, thus transmitting it successively without interruption until to-day for about two hundred years" Such a paramparā would be very important if it came down from Bodhiruci himself, or if we knew anything about the names to verify the truth But it seems to be all in the negative First of all, the work is stated to be the translation of an Indian original; but that it is not a translation can easily be seen by a perusal of its If it is not an Indian work, it can only be a compilation in China, either by Bodhiruci or by some other hand In any case the work was in existence soon after Bodhiruci, because it was quoted by K1 tsang (AD. 548-623) and Hu1 yuan (died AD 589) Ki tsang's quotation in the commentary on the Vajracchedikā, however, differs somewhat from what we have in the present text of the Chin kang sien lun. The work may have undergone an alteration by a later hand. In the style of composition and the method of annotation we notice

¹ My edition of the Chinese Tripitaka, vol XXV, no 1512, p 874

many points that give the work the stamp of Chinese authorship. As to the authenticity of the work there was some dispute among Chinese savants of old, and the learned Ki, a pupil of Hiuen tsang, finally passed a sentence saying: "As to the śāstra Chin kang sien (Vajrarși), it is said that he [Chin kang sien] was a man of Wu in the southern section [of China], and his work is not a true sacred teaching." This means that Chin kang sien was not an Indian but a native of Wu in the south, and is not giving us a true teaching. It would amount to saying that the work is a Chinese forgery As we know that learned forgeries were rather habitual early in the Six Dynasties and Sui Dynasty, and that quotations from forged works can be found even in some serious books, we can almost safely assume with the learned K1 that the work in question belongs to this category Apart from this, the parampara itself is of a dubious character Between Asanga-Vasubandhu and Bodhiruci only three names are given, and yet a period of two centuries is said to have elapsed This is hardly credible, as Mr Ui rightly thinks. Besides, those three transmitters are mere names unidentified with any known personages in India or elsewhere Not one of the catalogues of the Chinese Tripitakas, thirteen in number, has recorded the work either as a translation or as a Chinese compilation Having these facts before us, we can in no way utilize a work like this as a basis of proposing a date, even if I may be too harsh in regarding it as a forgerv

Next as to the Bodhisattva-bhūmy-ādhāra and the Bodhisattva-bhadraśīla, translated into Chinese a D 413-421 and 431 respectively. These two are, doubtless, portions of the large Yogācāra-bhūmi. If Asanga is the actual author of all the three texts, a date anterior to that of the translation will be suitable for him, and my date for Vasubandhu ought to be given up at once From this point of view Professor Wogihara proposed a D 390-470 for Vasubandhu and A.D. 375-450 for Asanga, though the reason why he puts the difference of twenty years of age between the two brothers by the same mother is not quite clear to me Professor Sylvain Lévi, too, on this account abandoned his former date and proposed a new date, holding that Asanga's activity covers the whole of the first half of the fifth century, as referred to above. Concerning the authorship of these four books just mentioned, Professor Ui rendered us a great service in his research

¹ Ki is the youngest but most learned pupil of Hiuen tsang Formerly I called him Kuei Chi and M Peri, Kouei ki, but we were mistaken, his real name being simply Ki His words here quoted are from his commentary (Tsan shu) on the Vajracchedikā.

on Maitreya, in which he concluded that Maitreya was the actual author of these works, not simply an inspirer of Asanga. I have made an abstract of Mr. Ui's research from his Study of Indian Philosophy, and give it here as a supplement to this article. According to him most of the works hitherto assigned to Asanga, inspired from above by the Bodhisattva Maitreya, are in reality to be attributed to Maitreya himself In that case Asanga would be only a transmitter, direct or indirect, of Maitreya's Mahāyāna doctrine. Chi yuan,1 who went to India with Fa hien and Pao yun (A D. 399-414), invited Buddhabhadra to China, and on his return home translated several Sanskrit texts. As he had some doubt as to the Vinaya practice, he started once again for India by sea some time after A D 427, and after his arrival in India he saw several Arhats and inquired about his doubt No one, however, could give a decisive answer. Thereupon an Arhat ascended, while engaged in meditation, to the Tusita heaven and inquired of Maitreya living there as to Chi yuen's doubt, and found that the latter was right in his understanding He was satisfied with it, and on his way home he reached Ki pin (Kaśmīra), where he died without a disease, aged seventy-eight. If Maitreva lived on earth at all, he ought to have been in activity about that time Some of the five Dharmas which are attributed to Maitreya in Tibet are assigned to Sāramati in China Whether Saramati can be identified with Maitreva or not remains to be seen. If, in any case, a scholar named Maitreva be found to be the author of those works hitherto attributed to Asanga, then the date of the latter ought to be shifted later, at least by one generation, if not more The ground for an earlier date for Vasubandhu should give way altogether

Thirdly, as to Dharmatrāta's Samyukta-abhidharma-hrdaya, Professor T. Kimura has shown in his Study of the Abhidharma Literature, I think, with a successful issue According to him, Vasubandhu systematized Dharmatrāta's work just mentioned, and developing it with the Sautrāntika views, wrote the Abhidharma-kośa as a textbook of the realistic school. Dharmatrāta's work mentions the name "Vasubandhu," who represents a philosophical tenet of his time. This Vasubandhu is explained to be an older Vasubandhu by Fu kuang, a pupil of Hiuen tsang, but those who advocate an earlier date will hold it to be a mistake on the part of Fu kuang

Fortunately, however, this point can be traced in Yaśomitra's Abhidharma kośa vyākhyā,² which takes that old Vasubandhu to be a

¹ "Chu san tsan chi tsi" (Nanjio, 1476) vol XV, s 7

² Professor de la Valleé Poussin, Vasubandhu et Yaśomitra, pp xix and 159.

Sthavira and the Upādhyāya of Ācārya Manoratha, who is, according to Paramārtha's Life of Vasubandhu, an elder contemporary of Vasubandhu. According to the internal evidence adduced by Mr. Kimura from the Abhidharma literature, a succession of these principal Abhidharma works is to be assumed, and Vasubandhu's Abhidharma-kośa is to be placed at the concluding period, and has to come subsequent to Dharmatrāta's work, which was translated thrice— A D 418, 426, and 434 Had there been in existence Vasubandhu's Abhidharma-kośa, which is ever so much elearer than Dharmatrāta's work, why should they translate the latter work so often, one after another, one Chinese (Fa hien) and four Indian (Buddhabhadra, Īśvara, Guṇavarman, and Sanghavarman), all well up in things Indian, having been engaged in it As for further detail, the reader is referred to Professor Kimura's discussion, an abstract of which is also given here at the end

The above three points made clear, it will be quite sufficient for our purpose, because all other chronological data from the Chinese sources are often contradictory to each other, and the lists of transmission of the Idealistic school, from Vasubandhu down to Bodhiruci or Dharmapāla, are also in conflict with each other What remains for me to do is to translate all the important materials and to lay them before my readers, a task too heavy for me at present The present article is to indicate simply that the date proposed by me some twenty years ago still holds good, now that so many scholars have been in the arena and so many earlier dates have been proposed. It is gratifying to me to see that Professor R Garbe, in the second edition of his Sānkhya Philosophy (p. 74), follows my date throughout, giving a reason why he does so. The following lists of Indian philosophers may help us to see that the interval between Vasubandhu and Bodhiruei or Dharmapāla can in no way be so wide as two centuries

LISTS OF TEACHERS, SHOWING THEIR RELATIONS TO VASUBANDHU

TEN COMMENTATORS OF VASUBANDHU (Vijñānamātratā)

- 1. Bandhuśri, contemporary and commentator of Vasubandhu, circa, A D 420-500.
- Citrabhānu, contemporary and commentator of Vasubandhu, circa A D 420-500
- 3 Gunamatı, his Laksanānusāra, translated by Paramārtha (came to China a D 546) Teacher of Sthiramatı (4), Of Late Years, Itsing, a D 671-695
- 4 Sthiramati, elder contemporary of Dharmapāla (6) a D 528-560, pupil of Gunamati (3), Of Late Years, Itsing
- 5 Suddhacandra, contemporary of Sthiramati (4), commentator of Vasubandhu's Paramārthasaptati

- 6. Dharmapāla, died A D 560, aged 32, teacher of Sīlabhadra whom Hiuen tsang met at his advanced age of 106, A D 633, Of Late Years, Itsing.
- 7 Nanda, teacher of Jayasena known to Hiuen tsang A D 629-645 in India, commentator on the Yogacarabhumi
- 8 Visesamitra, pupil of Dharmapāla (6), commentator of Maitreya's Yogācārabhūmi; otherwise called Jinamitra by Nanjio
- Jinaputra, pupil of Dharmapāla (6), commentator of Maitreya's Bodhisativabhūmi
- 10 Jñānacandra, pupil of Dharmapāla (6), hving in Tiladha viliāra in Itsing's time, A D 671-695

NB Of the above names, Nos 1 and 2 are said to have hived in the 900 years PN, at the same time as Vasubandhu, while Nos 3 to 10 lived after 1100 years PN. The long interval is utterly unaccountable. Either one or the other is a mistake. As to Dharmapāla, Itsing makes him a contemporary of Bhartrhari who died forty years before him, that is, circa AD 630-650. This seems to be an error

Π

(a) POINTS OF DISPUTE

- 1 Bandhu≤rī
- 3 Gunamati, deriving his idea from Bandhuśrī, asserts two divisions of menta function
- 4 Sthramati, pupil of Gunamati (3), one division of mental function
- 7 Nanda, two divisions of mental function

(b) Points of Dispute

- 2 Citrabhānu
 - (a) Dinnāga, deriving his idea from Citrabhānu (2), asserts three divisions of mental functions, authority of hetmidyā (logic)
- 6 Dharmapāla, four divisions of mental function, pupil of Dinnāga (according to Tibetan tradition)
 - (b) Sankarasvāmi, pupil and successor of Dinnāga (a) in hetuvidyā (logic)
 - (c) Pra\(\seta\)stap\(\text{ada}\), Vai\(\seta\)sika philosopher defending limiselt against Dinn\(\text{aga}\)'s hetuvidy\(\text{a}\) (logic), asserts nine gunas of \(\text{Atm\(\text{a}\)}\)
 - (d) Paramārtha, died a p 569 aged 71 quotes nine gunas ôt the Vaisesika, writes the Life of Vasubandhu, translates two works of Dinnāga (a) and one work of Gunamati (3)

(c) Points of Dispute

- (e) Candrapāla, admits only pūrva-vāsanā in the ālaya-vijnāna
- 7 Nanda, asserts nava-vāsanā
 - (f) Jayasena, follower of Nanda (7), asserts nava-vāsanā
- 6 Dharmapāla, admits pūrva-vāsanā as well as nava-vāsanā

Ш

LIST OF OPPONENTS OF VASUBANDHU

- (1) Sanghabhadra, opponent in Abhidharma, Of the Middle Age, Itsing, two works against the Abhidharma kośa.
- (2) Bhāvaviveka, opponent in Prajňāpāramitā, Of the Middle Age, Itsing.
- (3) Vasurata, opponent in Vyākarana, one work against the grammar of the Abhidharma-kośa
- (4) Iśvarakrsna, opponent in Sānkhya, against his Sānkhya-saptati Vasubandhu wrote Paramārtha-saptati

IV

CHINESE THREE SCHOOLS OF IDEALISM (Vijñaptimātratā)

- I Ti lun tsung (Daśabhūmi school) Founded by Bodhiruci from North India (A D 508 to China), probably representing the North school of the idealistic philosophy
- II Shueh lun tsung (Mahāyāna-samparıgraha school) Founded by Paramārtha from Ujjayınī, West India (A D 539 invited to China), probably representing the famous Valabhi school of the idealistic philosophy
- III Hu fa tsung (Dharmapāla school) Founded by Huen tsang (A D 629-645, in India), representing the then flourishing Nālanda school, instituted by Dharmapāla, with the appearance of this school the two old schools became wellingh extinct

v

THREE PREDECESSORS OF VASUBANDHU'S REALISTIC PHILOSOPHY

- I. Dharmottara (or Dharmaśri) His work on realism, Abhidharma-hrdaya (Nanjio, 1288, translated A D 343-344 or 384)
- II Upaśānta His work, Abhidharma-hrdaya (enlarged) (Nanjio, 1294, translated A D 563)
- III Dharmatrâta His work, Samyukta-abhidharma-hrdaya (Nanjio, 1287, translated [1] A D 397-418, [2] 426-431, [3] 434)
- IV Vasubandhu His work Abhidharma-koàa (Nanjio, 1269, translated AD. 563-567, 1267, AD 654, 1270, AD 651)
 - N B For further details, see Professor Kimura's supplement

VI

TARANĀTHA'S PARAMPARĀ OF TEACHERS

- I. Vasubandhu
- II Dinnāga, pupil of Vasubandhu
- III Dharmapāla, pupil of Dinnāga

IMPERIAL UNIVERSITY, TOKYO.

THE DATE OF VASUBANDHU SEEN FROM THE ABHIDHARMA-KOŚA

THE FOUR TEXTS

By TAIKEN KIMURA

THE earliest epitome of the Vaibhāsıka phılosophy is the Abhidharma-hrdaya, written by Dharmottara or Dharmaśrī (Nanjio, 1288). It treats of important questions of the abhidharma philosophy, yet it is, as a system of philosophy, nothing but a crude writing in form and content. Then comes Upaśānta's Abhidharma-hrdaya (Nanjio, 1294). It is a new work, enlarged and developed from the above text Next we have Dharmatrāta, who again enlarged on and developed Upaśānta's text. His work is called the Samyukta-abhidharma-hrdaya (Nanjio, 1289). This work was again revised and developed by Vasubandhu, then a great realistic philosopher, and is what we know as the Abhidharma-kośa (Nanjio, 1269, 1270). For a detailed discussion, see Kimura's Study of the Abhidharma Literature, part 5. Now let us examine the dates of the Chinese translations of the above four texts which have appeared one after another.

CHINESE TRANSLATIONS OF ABHIDHARMA HRDAYA AND OF ABHIDHARMA KOŚA

Ŧ

Dharmottara's Abhidharma-hrdaya (Nanjio, 1288)

Translators Sanghadeva and Tao an

Dates variously given A D 343-344 (see Nanjio, 1688, vol V), A D 384 (see Nanjio, 1476, vol II), or A D 391 (see Nanjio, 1288)

H

Upaśānta's Abhulharma-hrdaya (Nanjio, 1294)

Translators Narendray asas (a p. 557–568), and Dharma prajňārucı (an assistant) Date A D. 563

Ш

Dharmatrāta's Samyukta-abhidharma-hrdaya (Nanjio, 1287)

There are three translations

(a) The earliest translation (now lost)

Translators Fa hien, AD 399-414 (in India), and Buddhabhadra, AD 398-421 (in China).

Date AD 397-418

(b) The second translation (now lost).

Translators Isvara (A.D. 426-431), 10 chapters, and Gunavarman (A.D. 431), last 3 chapters.

(c) The third translation (Nanjio, 1287)

Translator Sanghavarman (A D. 433-442)

Date AD 434

IV

Vasubandhu's Abhidharma-kośa

(a) The first translation (Nanno, 1269)

Translator Paramartha, author of the Life of Vasubandhu

Date AD 563-567

(b) The second translation (Nanjio, 1267)

Translator Huen tsang

Date AD 654

(c) The Abhidharma-kośa-kārikā (Nanjio, 1270)

Translator Hiuen tsang

Date AD 651

Among these four treatises, which successively develop the former, one, that by Dharmatrāta (III), with its three translations, is most important for ascertaining the date of Vasubandhu, for it existed immediately before the work of Vasubandhu, and was translated by five competent priests who were versed in things Indian of that period, that is to say, A D 400-434 Fa hien, who, as we all know, traveled in India about fifteen years (A D 399-415), does not inention even the name of Vasubandhu, and had he known of such an authentic text as the Abhidharma-kośa, why should be have translated Dharmatrāta's imperfect work instead? The remaining four of the translators, who were all from India, arriving in China between 390 and 433, did not even speak of Vasubandhu or Asanga and, themselves translating the imperfect text of Dharmatrata, did not bring to light the systematized work of Vasubandhu There would be no reason whatever to translate three times one and the same older text, had there been before them a new revised work of our great philosopher.

Two Vasubandhus

We know from the *Life of Vasubandhu* that Vasubandhu had two brothers, Viriñci-vatsa Vasubandhu and Asanga Vasubandhu, and we have to acknowledge the existence of yet another teacher named Vasubandhu anterior to our Vasubandhu, the author of the *Abhidharma kośa*.

In the preface to the Samyukta-abhidharma-hrdaya of Dharma-trāta, it is said "Several teachers have written Abhidharma-hrdayas, which are not similar in scope, either extensive or concise. The work

of Dharmottara (or Dharmaśrī) is extremely concise, while that of Upaśānta is much larger, being of eight thousand ślokas. Yet there was another teacher whose work consisted of twelve thousand ślokas. These two are said to be extensive ones Vasubandhu annotated the dharma in six thousand ślokas, and his work was wide in extent and deep in meaning, not being inclined to one of the Tripitakas was the Asmnskrta-ākāśa-śāstra." Vasubandhu here referred to must be an earlier teacher of that name, and not the author of the Abhidharmakośa. He must be anterior to Dharmatrāta, who quotes him, and to the dates of translation of Dharmatrāta's work, that is, A D 418, 426, and 436, as we have seen above M Peri considers that "six thousand ślokas" here may be a mistake for "six hundred ślokas," because the Abhidharma kośa of our Vasubandhu contains only so many, he not being aware of the fact that it in reality referred to another older Vasubandhu, as Pu kuang hinted M Peri's proposition thus falls to the ground as soon as we recognize Vasubandhu's Abhidharma-kośa to be subsequent to Dharmatrāta's work For convenience sake we will call the author of the Asawskrta-ākāśa the old Vasubandhu, and the author of the Abhidharma-kośa the new Vasubandhu

In the Abhidharma-kośa itself (Chapter 9) we come across a sentence explaining Avidyā in the following words "It is said by another commentator that the unreasonable $manask\bar{a}ra$ as mentioned in other sūtras is the cause of Avidyā".

The words "another commentator" here are rightly explained by Pu kuang, a pupil of Hiuen tsang, as the older Vasubandhu Further, Yasomitra too, in his Abhidharma-kosa-vyākhyā, explains it in the following words "Sthauro Vasubandhur Ācārya Manorathopādhyāya See Professor de la Vallée Poussin, Vasubandhu et evam āha " Yasomitra, page 159 Thus the old Vasubandhu, so-ealled by Pu kuang, was, according to Yasomitra, the upādhyāya of the Ācārya Manoratha, who was a contemporary of our Vasubandhu and was quoted, though without giving his name, in our Vasubandhu's Adhidharma-kośa itself So we can assume with perfect safety that Vasubandhu, the author of the Asamskrta-ākāśa, quoted by Dharmatrāta, Vasubandhu, a sthavira and the upādhyāya of Manoratha, mentioned by Yasomitra, and Vasubandhu, hinted at in the words "another commentator" by the new Vasubandhu in his Abhidharma-kośa and explained by Pu kuang as the old Vasubandhu, are one and the same personage, and one and all refer to the old Vasubandhu, quite different from our Vasubandhu So we should be very careful not to assign a date to Vasubandhu without discrimination

CONCLUSION

Judging from the dates of translation of the Chinese Abhidharma texts, we can say that the Abhidharma-kośa was not yet in existence in A.D 430, and consequently during this period the new Vasubandhu had not yet entered upon his career as the author of either the Realistic school or the Idealistic school. Those who assign him a date in the third or fourth century are, I think, confusing the old with the new. I, for my part, consider the date A.D. 420-500 to fit our great philosopher best.

IMPERIAL UNIVERSITY, TOKYO

THE DATE OF VASUBANDHU SEEN FROM THE HISTORY OF BUDDHIST PHILOSOPHY

By GENMYO ONO

THE theory of the three persons $(k\bar{a}ya)$ of Buddha and the eight **L** faculties of mind were developed and brought into perfection by Vasubandhu These theories may be taken as peculiar to him In old days, as in the present day, a new thought current in India used at The translating of an Indian original once to be reflected to China was at the same time the transplanting of the idea set forth in it. Vasubandhu's two theories just referred to cannot be traced in the works, either sūtras or śāstras, translated prior to the commencement of the fifth century In the Mahā-parinirvāna-sūtra (Nanjio, 113), translated by Dharmaraksa AD 414-421, and the Śrīmāli-sinhanādasūtra (Nanjio, 59), translated by Gunabhadra A D. 436, we have for the first time the discourse about the nature of Buddha (Buddhasvabhāva) and the embryo of Tathāgata (Tathāgata-garbha) There are, however, as yet no theories of the three Buddha-kāyas or the eight vijnānas In the Suvarna-prabhāsa-sūtra (Nanjio, 127), also translated by Dharmaraksa, A D 412-426, and the Tathaqatagarbha-sūtra (Nanjio, 384), translated by Buddhabhadra A D 420, no theories of Vasubandhu are found as yet It is true there exists in the former a section, Trikāya vibhāga, which treats of Buddha-kāyas This section, however, is a translation interpolated by Paramartha, a D 548-569 We have for the first time an enumeration of the eight vijnanas, in the Lankavatāra-sūtra translated by Gunabhadra A D 443, though the functions of rijānas are not clearly defined. In the works translated by Bodhiruci and Ratnamati A D 508-535, we see the idea gradually ripened and are confronted often with the three $k\bar{a}yas$ and the eight $vij\tilde{n}\bar{a}nas$, though the theories are not yet systematized. Such treatises are the Sandhi-nirmocana-sūtra (Nanjio, 246), the Pu tsang pu chien sūtra (Nanjio, 524), the Daśabhūmi śāstra (Nanjio, 1194), the Vajracchedikā śāstra (Nanjio, 1168), and the Saddharma-pundarīka-śāstra (Nanjio, 1233), the latter three being Vasubandhu's own works

Finally, those treatises of Asanga and Vasubandhu more or less professing to set forth the theories were translated by Paramartha, Buddhaśanta, Gautamaprajñāruci, and others, A D 531-563 These are the *Mahāyāna-samparıgraha* (Nanjio, 1184), of Asanga, the *Vi*-

jñapti-mātratā (Nanjio, 1238), the Karma siddhi (Nanjio, 1222), the Buddha svabhāva (Nanjio, 1220), the Mahāyāna-samparigraha-śāstra (Nanjio, 1171), the Madhyānta-vibhāga (Nanjio, 1248), all of Vasubandhu; the Daśa-bhūmi-śāstra (now lost) of Maitreya, the Trikāya section in the Suvarnaprabhāsa, and the Wu shang i sūtra (Nanjio, 259), the latter five being the translations by Paramārtha, A.D. 548-569. With these works we are first introduced to the systematized theories of Asanga and Vasubandhu, especially with regard to the three kāyas and the eight vijūānas

To sum up, the theory of the eight $vij\bar{n}\bar{a}nas$ is established out of the idea of the Buddha-gotra and the $Tath\bar{a}gata$ -garbha and with the development of the eight $vij\bar{n}\bar{a}nas$ the theories of the tri- $k\bar{a}ya$ and the $caturj\bar{n}\bar{a}nas$ are completed. If we examine the whole of the translated texts, we find no trace at all during the fourth century. At the beginning of the fifth century, we notice some germs of them appearing, but from the middle of the fifth century down to the beginning of the sixth century, we feel the ideas fully developed and ripened. Since the systematization of the theories belongs to Asanga, and especially to Vasubandhu, their activity may be considered to cover the middle of the fifth century and after

KÖYASAN UNIVERSITY

MAITREYA AS AN HISTORICAL PERSONAGE

By HAKUJU UI

THE Bodhisattva Maitreya was probably an historical person at the L beginning, and afterwards was believed to be the coming Buddha. This belief seems to be pretty old, but the Maitreya here alluded to is the instructor of Asanga, especially in the doctrine of Yogacara, namely, Vijnānamātratā. We shall restrict our discussion to this personage. For convenience' sake we shall use the name Maitreya without any title for the instructor of Asanga, and therefore a historical person; while we shall add the title Bodhisattva for the would-be Buddha. who may be considered a fabulous person I presume that scholars will generally believe with me in the historical existence of Maitreva, yet nobody from our side until to-day has set forth his opinion expressly on this point, and consequently the authorship of many a work assigned to Maitreya, or to Asanga, is not quite settled This is a serious question in the history of the development of Buddhism in India, which, if settled once for all, will clear up a dark passage in the origin of idealism and its development and will enable us to fix the age of activity of Asanga and Vasubandhu

Generally speaking, those who speak of the relationship of Asanga with Maitreya are Asanga himself and Vasubandhu Those who handed down such a tradition are three first. Bodhiruci, who came to China in A D 506 and stated that Maitreya composed the commentary on the Vajracchedikā and the Bodhisattra-bhūmy-ādhāra, and taught them to Asanga, secondly, Paramartha (499-509), who reached China in A D 546 and compiled the Life of Vasubandhu, and thirdly, Hiuen tsang (600-664), who started from China in A D 629 and on his return home in a D 645 compiled his travels, Si yu ki In Tibet there are traditions much later than those handed down by these travellers According to the Life of Vasubandhu, by Paramartha, Asanga was a native of Purusapura (Peshwar), and joined the order in the Sarvastivāda school Learning of the doctring of Void of the Hīnayāna, and being unable to comprehend it, he determined to kill himself Pindola of the east Videha came and instructed him in it. Not being satisfied with it, he went up to the Tusita heaven, where he was initiated into the doctrine of Void of the Mahāyāna by Maitreya Afterwards he now and again went up to the heaven to learn the Mahāyāna sūtras, and on descending he preached them, but people would not believe him. He asked Maitreya himself to come down and preach the Law. Thereupon the latter made a descent on earth and lectured on the Sapta-daśa-bhūmi (Yogācāra-bhūmi) for four months. During the lecture no one but Asanga could approach him, though all could hear him from afar. Asanga in the daytime repeated and explained the lecture of the night before. Then people began to believe the Mahāyāna. Asanga could through the power of meditation understand even that profound Avatamsaka-sūtra. According to Hiuen tsang, he joined the order in the Mahīsāsaka school, but was afterward converted to the Mahāyāna While in a sanghārāma near Ayodhyā, he often went up to the Tuṣita heaven at night and learned from Maitreya the Yogācāra-bhūmi, the Sūtrālankāra, and the Madhyānta-vibhāga, and in the daytime he repeated and expounded them.

Tāranātha's tales, mythological as they are, give similar traditions as to Maitreya's instruction, Asanga's lecture and his compilation of śāstras These three traditions agree in substance, making Asanga receive instruction from Maitreya But who is Maitreya, a teacher or a Bodhisattva? Naturally we had to presume that the tradition would contain an historical fact, and Maitreya was the actual teacher of Asanga. We shall now examine what we are told emanated from Maitreya

T

THE YOGACARA BHUMI (Nanjio, 1170)

The Yogācāra-bhūmi, said to have been preached by Maitreya, was translated by Hiuen tsang, a D 648 This text was partially translated in an earlier period, as a separate sūtra, as follows

- (a) Bodhisattva-bhūmy-ādhāra sūtra (Nanjio, 1086); translated by Dharmarakṣa, A D. 414-418 (vol xxxv, chap 1, vols. xlix, l, chap 5, of the Yogācāra-bhūmi).
- (b) Bodhisattva-bhadra-śīla sūtra (Nanjio, 1085), translated by Gunavarman, a d. 431 (the same chapters as above of the Yogācāra bhūmi)
- (c) Bodhisattva-śīla-karmavāca (Nanjio, 1197), translated by Hiuen tsang A.D 649 (vols. xl, xli, xli, chap 10 of the Yogācāra-bhūmi).
- (d) Bodhisattva-prātīmoksa (Nanjio, 1096); translated (1) by Dharmarakṣa, a d 414-421, (2) by Hiuen tsang, a d. 649 (the same chapters as above of the Yogācāra-bhūmi).
- (e) Chie ting tsang (Nirnaya Sangraha), (Nanjio, 1235); translated by Paramārtha, A.D. 550-560 (vols li-lvii, chaps. 1-7 of the Yogācāra-bhūmi).

(f) Wan fa chang li (Rāja-dharma-nyāya), (Nanjio, 1200); translated by Hiuen tsang, A.D. 649 (vols. lviii-lxi, chaps. 1-4 of the Yogācāra-bhūmi).

All these six are portions of the large Yogācāra-bhūmi, and most of them are said to have been expounded by Maitreya for Asanga.

Only one of these is said to have been composed by Maitreya. Hiuen tsang himself alludes to the Yogācāra-bhūmi in his Si yu ki (vol. x). and says that it was composed by Maitreya The internal evidence, too, indicates that the whole of the Yoqacara-bhumi existed first, and extracts were drawn from it afterwards, thereby making them separate sūtras In Asanga's Hsien yang shang chao lun (Nanjio, 1177), he says expressly that Maitreya is the propounder of the Yogācārabhūmi, and adds "Formerly I, Asanga, heard it from him, and now setting together the important points of the Bhūmi will here illustrate This shows again that this śāstra is a comthe holy teaching" . pendium of the Yogācāra-bhūmi propounded by Maitreya pendium is Asanga's work, while the original from which it was abridged Therefore the Yogācāra-bhūmi must be could not have been his own a work of Maitreya, himself Both Vasubandhu's commentary on the Mahāyāna-samparıgraha and Jinaputra's commentary on the Yogācārabhūmi praise in their opening verses Maitreya as the expounder of Thus no one has ever regarded Asanga as the the Yoqācāra-bhūmi author of the whole or a part of that work The Yoqācāra-bhūmi, one hundred volumes in all, is divided, the principal portion of it into seventeen bhūmis, and the rest into three chapters concerning the Tripitaka

Therefore the text is often called Sapta-daśa-bhūmi-sūtra, or śāstra. Bhāviveka called the vijūāna-mātra philosophers by the name of Saptadaśabhūmi śāstrin, while Paramārtha names the work itself Sapta-daśa-bhūmi-sūtra The Bodhisattva-bhūmiy-ādhāra (Nanjio, 1086), a portion of the Yogācāra-bhūmi, as we have seen, is the most important of all the seventeen bhūmis. This text is quoted twice by Asanga in his commentary on the Vajracchedikā (Nanjio, 1167, 1208), which was again commented on by Vasubandhu. This clearly indicates that the Bodhisattva-bhūmi was known to Asanga and Vasubandhu and was in existence before them. Thus we can safely conclude that neither the Bodhisattva-bhūmi nor the Yogācāra-bhūmi is the work of Asanga. They can only be the works of Maitreya, who transmitted them directly or indirectly to Asanga.

II

THE YOGA-VIBHĀGA-ŚĀSTRA (now lost)

This text does not exist either in Sanskrit or in Tibetan or in Chinese, but from the quotations found in the Mahāyāna-samparıgraha (Nanjio, 1183, chap 4), the Abhidharma-sangīti (Nanjio, 1197, chap. 6), and the Vijñapti-mātratā-siddhi (Nanjio, 1197, chap. 9), we well know that it existed in those days The purport of the passages quoted is actually found in the Madhyānta-ribhāga (Nanjio, 1244, chaps. 1, 4, 5), which also belongs to Maitreya As a similar passage exists also in the Yoga-ribhāga section (chap 6) of the Sandhi-nirmocana-sūtra (Nanjio, 246, 247), we may assume that it was composed by Maitreya on the same basis as sūtra

III

THE MAHĀYĀNA-SŪTRALANKARA (Nanjio, 1190)

For this work we possess fortunately both Sanskrit and Chinese According to the catalogue Kai yuen lu (Nanjio, 1485, AD. 730), and the Chinese editions of Sung, Yuen, Ming, and Kaoli, it was composed by Asanga Sylvain Lévi, the editor of its Sanskrit text, probably following these traditions, attributed it to Asanga take was originated by the Kai yuen lu catalogue, and it comes as follows Prabhākara mitra, who was a pupil of Sīlabhadra in Nālanda, and was well versed in the Yogācāra, came to China, leaving his pupils, Prajñādhara varman and others, behind, and was engaged in translation of Sanskrit texts till a D 633 A translation of this text was finished AD 630-632, and presented to the Emperor Tai tsung in 633, in which year the translator died, aged 69 Hiuen tsang was in India, and just in that year saw Sīlabhadra, at the advanced age of 106, in Nālanda Li pai ye wrote a preface to the translation by the Imperial order, and stated in it that it was compiled by the Bodhisattva Asanga. I do not think that he meant to say that Asanga was the actual author of the text He had probably indicated by the word "compiled" that Asanga heard it from Maitreya and afterward arranged what he had heard, as was generally believed Hiuen tsang, too, tells us exactly so. If so, the statement of the Kai yuen lu that Asanga "composed" it is an error on the part of its author Hui chao, a pupil of Hiuen tsang, in the commentary on the $Vij\tilde{n}ana$ -matrata, says expressly that the Kārīkā was composed by Maitreya and the commentary by Vasubandhu.

Hui chao (circa A.D. 690) is much anterior to the author of the Kai yuen lu (A.D. 730), and we can take it to have been derived from his teacher, Hiuen tsang. Sthiramati, in his Mahāyāna-avatāra (Nanjio, 1243), says toward the end "Thou shouldst know that the Mahāyāna is the original teaching of Buddha as it is expounded in the Sūtrālankāra of Maitreya" Thus, according to Sthiramati, the text is by Maitreya, not by Asanga A similar tradition is handed down in the Dharma lakṣana school in China, though whether the authorship of the commentary belongs to Asanga or to Vasubandhu is still a question

IV

THE MADHYĀNTA-VIBHĀGA (Nanjio, 1245)

The Kārīkā of the Vībhāga was composed by Maitreya, while the commentary is by Vasubandhu—This existed therefore, like the other extracted texts, before Asanga and Vasubandhu—No explanation is wanted as to its being first propounded by Maitreya to Asanga, who in turn handed it down to Vasubandhu

V

THE VAJRACCHEDIKĀ-PĀRAMITĀ-ŚĀSTRA (Nanjio, 1167, 1168)

I-tsing says in the appendix to his translation (1231) "According to a tradition in India, Asanga received from Maitreya the $K\bar{a}rik\bar{a}$ of 80 verses and Vasubandhu commented upon it". It is thus a work of Maitreya—Bodhiruci (a d. 508) attributes the $K\bar{a}rik\bar{a}$ as well as the commentary to Vasubandhu, while I-tsing (a d. 711) assigns only the commentary to Vasubandhu—I-tsing puts in the text Asanga as the composer of the $K\bar{a}rik\bar{a}$ but this contradicts his own statement above quoted—So we ought not take the word 'composer' in its strict meaning

VI

THE ABBISAMAYA-ALANKĀRA

Though it is not known in China, there exists both in Sanskrit and in Tibetan the Abhisamaya-alankāra The Sanskrit text is found in Professor Takakusu's collection, besides Professor Wogihara's copy. The authorship evidently belongs to Maitreya (Kritir iyam Arya-Maitreya-nāthasya), but few notice the colophon It is attached to the commencement of the 25,000 Prajūā-pāramitā, and was pointed

out by Hara Prasād Śāstri, who discussed the question of the historical character of Maitreya. Having obtained a hint from his article, I searched through all Chinese texts emanating from Maitreya. In the Tibetan traditions the Abhisamaya-alankāra is sometimes attributed to Asanga and at other times to Maitreya But the Tibetan catalogue assigns it definitely to Maitreya and makes it have no connection whatever with Asanga

Besides the above six texts, there are two Tibetan texts attributed to Maitreya, namely, the *Dharma-dharmatā-vibhanga* and the *Mahā-yāna-uttara-tantra* Vasubandhu wrote a commentary on the former, while Asanga wrote that on the latter Of these two a translation of the latter by Ratnamati, A D 508, is found in the Chinese Tripitaka (Nanjio, 1236), in which the $K\bar{a}rik\bar{a}$ is said to be by Maitreya and the commentary by Asanga Fa tsang (died 699) in his commentary on the Wu cha pieh lun ($Avišesa-š\bar{a}stra$, Nanjio, 1258), says

"According to an Indian tradition handed down by Devaprajña, the translator of the śāstra the author of the Mahāyāna-uttara-tantra, is Sāramati (Kien hui), who also wrote the Wu cha pueh lun Yen tse, a Korean pupil of Hiuen tsang, in his commentary on the Sandhinirmocana (Nanjio, 247), speaks of Sāramati as the author of the Uttara-tantra."

On this point this commentary is quite different from the Tibetan tradition, in which the above two texts are classed among the five dharmas of Maitreya

I have now taken up almost all the texts that are connected with Maitreya, and shown that seven of them are by the hand of Maitreya himself.

If he has so many works to his credit there can be no doubt whatever as to his historical existence. Moreover, Asanga never quotes any other śāstras than those of Maitreya, quotes by name the Bodhisattva-bhūmi (a portion of the Yogācāra-bhūmi), the Yoga-vibhāga, the Mahāyāna-sūtra-alankāra, and the Madhyānta-vibhāga, in his work, Mahāyāna-samparigraha (Nanjio, 1183, 1184), and uses them as the foundation of his own discussion. He would not use his own work as a basis of his own theory.

Accordingly the Yogācāra-bhūmi and other works above referred to were not composed for the first time by Asanga, but had existed as separate works before Asanga and Vasubandhu. Maitreya, a worthy human philosopher, wrote several works on his own idealism, and taught Asanga probably personally. Asanga further systematized his own philosophy on the basis of his teacher's instruction. This being

the case, it would not be very difficult, especially in India, to derive his doctrine from the Tuṣita heaven, where the Bodhisattva Maitreya is believed to live, thus identifying Maitreya with the coming Buddha. The idea of the heaven-descended philosophy would add great weight to the Mahāyānistic faith, for the faith in Maitreya in the Tuṣita heaven was already established both in India and in China. Tao an (A.D. 314–385) is said to have had such belief, and hoped for a birth in the Tuṣita heaven

Though Asanga's authorship of these works has been shifted to Maitreya, it would by no means lessen the greatness of Asanga, who remains still the author of eleven works of importance. His figure will come all the more to the front, for his position as an idealistic philosopher is thereby clearly defined, from his predecessor Maitreya and his successor Vasubandhu. The lineage of the Vijñāna-mātra school would be thus without any fabulous element. first, Maitreya, second, Asanga, third, Vasubandhu—with these three generations the systematization of the idealistic school came into completion.

As to the approximate date that can be proposed for Maitreya, the dates of translation give us a clue The Bodhisattra-bhūmi was translated by Dharmaraksa, A D 414-418. We can reasonably assume that the Yogācāra-bhūmi was in existence before a D 400 Sthiramati's Mahāyāna-avatara, which quotes Maitreya's Sūtrālankāra, was translated, according to one account, by Tao tai, A D. 397-439, but according to another, by Tan Yao, A D. 462 Tao tai went to the west of the Onion range and obtained the text of the Mahāvibhāsa, which he is said to have translated with Buddhavarman, Ap. 437-439 preface by Tao ting puts the time of translation as A D 425-427. The Mahāyāna avatāra, then, must have been translated after it, and this falls probably in A D 427-437, but the text must have been obtained before his return home, about AD 425 We can assume that the Yogācāra bhūmi and the Sūtra-alankāra had existed before A D 350. From these facts we can fix the terminus ad quem for the date of Maitreya at AD 350

IMPERIAL TOHOKU UNIVERSITY.

NOTE

Professor Ui's date is too early. The date of translation is A.D. 414 and after, and the compilation of the original is not necessarily to be put back so far as 64 years. Even if it be reasonable to put it back so far, it is only the terminus ad quem for the two works, not for Maitreya. Hereafter Professor Ui goes on to discuss the dates of Asanga and Vasubandhu. His dates are as follows. Maitreya, 270–350, Asanga, 310–390, Vasubandhu, 320–400; about 100 years earlier than mine. He acknowledges 150 years between Vasubandhu and Dharmapāla, instead of the 200 years of Peri. If there be an error of calculation, it must be in the length of this interval. See the lists of teachers above.

J. TAKAKUSU

THE WELL - TO ET

By C, A F RHYS DAVIDS

MY teacher Croom Robertson was one who often walked hand in hand with pain. And he would say, when lecturing in ethics on happiness — say it too with a wry quarter-smile as one of 'them who know' — 'Some say, why look ahead to pleasure or a neutral object? It is sufficient to be wanting riddance of pain. We can resolve to do without positive pleasure, but we cannot live with pain. Much of our action is to avoid pain, and no "calculus" is necessary here.' 1

This is to word 'the well' negatively. For pleasure, happiness is but the feeling accompanying the state of being well. When we are well, the body is in a pleasureful state, the mind, the will, is in a happy state, affairs, our little world, are in a prosperous state. But there is the 'man,' who is neither those instruments nor that little world, the 'man' of whom those are adjuncts, vehicles, and these the occasion, the arena, the medium of self-expression, self-direction. It is the very man, the very 'he' of whom we can most truly say, he is well, he is better, he is unwell, he seeks to be well, he wills the well

Now Buddhism, in its old Pali scriptures, worded $\tau \delta$ $\epsilon \hat{v}$ very largely in that negative way. Its spiritual hygiene is mainly taught in negative terms. That its code of moral fundamentals was negative is not a distinctive feature. Even to-day we do not word a Christian code of them in accordance with the teaching of Jesus: 'Ward thy fellowman as thyself. Ward his property as thine own. Ward a woman's husband as brother, a man's wife as sister and mother, ward the young as brethren. Let speech be truthful, kind, courteous, useful. Keep sober' But the Buddhist use of the negative term for the things making for man's 'will' goes far beyond the 'sīlas'. Here are some, all of which are leading terms in the holy life.

The goal, the summum bonum is Nibbāna, nissarana, (bhara-)nirodha, amata, khaya, anuppāda, rimutti, akuppa, akutobhaya. The way is niyyānika, nekkhamma, pahāna, nibbīdā, alobha, adosa, amoha, avyāpāda, anabhijjhā, animitta, suññata, appanihita. The saints are nibbūta, anāsara, khīnāsara, without chanda, parīpunnasankappa, katakaranīya, brahmacarīyavussītavant, pannadhaja, ohitabhāra, nittanha, and more might be added. All might be considered as summed up in

¹ Mind, January, 1893

the phrase sammā dukkhass' antakiriyāya—'for the perfect making an end of pain.' Once or twice the founder is recorded as summing up his teaching, and once it is in these words. 'Both in the past and now do I, even I, declare just this pain and the destroying of pain.' And that which he was said to have beaten out under the Bo-tree was the making-to-cease (nirodha) the coming-to-be (samudaya)

Earnest disciples were taught that ending of ill could only be ending of becoming (bhava). The word 'life' was neither appreciated nor depreciated, it was not used doctrinally. The thing to make cease was the being reborn and the being redead. These were the milestones of the woes of all the worlds And the man who has spiritually 'rejected, cut-down at the root, the body' of his desires and craving, 'made it like the stump of a palm tree, made it something that has ceased 'to become, so that it cannot grow up again in the future' - he alone is happy. So are the Arahants happy - not because before them lay well-warded the way of the worlds toward the goal - in that it was the way of and to the divine Well-Willer Safety ahead was merely the outlook of the convert, the entrant, the First Path wayfarer His was the slogan. Khinanirayo 'mhi: perished for me is purgatory! 2 not that of the saint Khīnā jāti. perished is birth! The saint had done with the Four Ways, he had 'crossed over' His was the happiness of Lucretius's coast-spectator He was safe, but his view was seaward at what he had come through. He was not looking landward at what now lay before him. That 'before' was as 'the track of bird in air untraceable '3

This that doth ne'er grow old, that dieth not,
This never ageing never-dying Path —
No sorrow cometh there, no enemies,
Nor is there any crowd, none faint or fail,
No fear cometh, nor aught that doth torment ⁴
To this, the Path Ambrosial have gone
— Full many

He was ın Nırvāṇa; of the 'beyond' he did but say, it was utter Nırvāṇa parinıbbāna For

Nowhere is measure for one gone to oblivion

That whereby we speak of him — that exists no longer
Wholly cut off are all forms of our knowing,

Cut off the channels of speech, every one 5

¹ Majjh 1, 140

² Samyutta, 11, 70, etc

³ Dhp ver 92, Theragāthā, ver 92

⁴ Therigāthā, ver 512.

⁵ Sutta-Nipāta, ver 1076

His happiness was on the one hand so retrospective and on the other so barred from any forward view into the future, that it might have served Croom Robertson as a fit instance of a well-being in terms of riddance of pain. It may have been with such 'as with one who after long toil and much peril reaches home, and is content with that for the day, whatever life may yet give or ask for on the morrow. They had won up out of the maelstrom of samsāra. . . to something ineffable, that now is, but is not to be described in terms of space or aftertime; and resting they sang. We will leave it at that.' 1

It will be said This is the 'well' held up in the teaching for the few, for those whose faces were set toward the highest, for those who, after ages of slow maturing, were near maturity. Of these I have said quoting Emerson 'of immortality the well soul is incurious He is so well that he is sure it will be well.' But, the objector goes on, the teaching for the many, for the believing layman is more positive, less austere, more human, more suited to those who have not turned their back on the world that they know, on life as they know it

This is true ³ No creed on earth may be said to sit so lightly and pleasantly over man's conduct and ritual observance as the Buddhist layman's sāsana. It may seem the creed of world-orphans. It is so Yet is it less so than it seems. He too seeks the Unseen Warding, for is not the quasi-deified Teacher one in a chronic process of ever-warding Buddhas? Is not the Teaching, in some way not understood but accepted in faith, a world-gift to man for his salvation? Are not the holy almsmen, albeit very unequal as to holiness, an ever-present influence warding off ill, producing merit? The layman could afford to word 'the well' positively. Worlds lay before him, but by a worthy life here, he could earn guarantees that they would be 'bright,' not 'dark'. He could afford to speak of things pleasant as pleasant, and not as in truth painful. He could speak calmly of death, for it was not the end-all, but just the common lot.

All this we know And if the worthy Buddhist layman is not always consistently cheerful over the last-named matter, neither are we when we, like him, find nothing better to comfort ourselves withal Small blame to the inconsistency. The blameworthy thing for him and us is to find nothing better

¹ Psalms of the Sisters, ver 511, 512.

² Psalms of the Brethren, xlv111

³ De la Vallée Poussin emphasizes this distinction, so vital to a just appraisement of (early) Buddhism as a whole *Nirvāna*, 1925

⁴ Sukham sukhato, Sutta Nipāta, ver 759, transl in Buddhist Psych, p 86

But there is one point about this layman's gospel that we forget to bring out It worded 'the man' more worthily than did the monk, the bhikshu There is no denial of 'the man,' no anatta, in such discourses to lavmen or lavwomen as that to Sigala, to the thirty kumāras (who were advised to seek 'the man'),1 to Visākhā, to Citta and other 'gamanıs', to Anāthapindıka There was no robbing the word man (puggala) of having any reality, of being a merely conventional label. There was no whittling down the word to 'a naming of something that exists (body and mind) by something that does not exist '2 The layman was reminded that things are transient and that ills abound, but the third monkish slogan anatta — a word not of mondial import, but derived (and misused) from a local, a temporary protest in early Buddhism, was not brought into his gospel, to worry and undermine his conviction that there was really and truly 'a man' who worked karma of thought, word and deed, and who reaped the harvest thereof here and hereafter

And with this more direct, less sophisticated, worther wording of 'the man,' the Buddhist lay-sāsana, be it noted, worded more rationally 'the well' of the man than did the monk. This lay in seeking his good (hita) and that of others, his advantage (attha, āmsamsa) and that of others (parannañ ca) both here and hereafter. Before him lay the two 'goings,' the well-bourne and the evil-bourne (sugati, duggati). Neither was eternal, though either probably lasted long. Certainly the former, the sayga loka, did. And how far Nibbāna—word as vague as our 'heaven'—was in any way distinct therefrom he did not ask. Not till Milinda made out a case of a distracted mankind in suspense about it 3 do we come across any worrying over the subject

Nor had that other word for the monk's ideal, vimiti, liberation, any charm for the layman Negative term though it be, it has come to appeal strongly to us, who are the heirs and the record-reading witnesses of ages of struggles for liberty, national, religious, social Scarce any word thrills us more strongly than just this word of riddance.

Liberté, liberté chérie' 4

It could thrill the monk, the nun no less The positive thing they had got rid of was so fearfully positive — awful even as fire in the turban,

¹ Vinava i, 23

² Vijjamānena avijjamānassa paridīpitā Abhidhammattha-sangaha, viii, 14

³ Mln 323 That there was any worry in the simply put query of Samyutta, iv, 251, 261, is not clearly implied

⁴ The 'Marsellaise'

fire in the house, fire in the jungle — that the very riddance itself stood for salvation, for peace, for 'the well.' The more usual Indian 'riddance-word' of salvation as purity (suddhi) does not reverberate in the early Dhamma as does the paean of liberty.

But it did not appeal to the Indian layman As a religious slogan it does not appear in the 'three' Vedas Moksa is a later development, due either to the influence of Buddhism, or to that which caused Buddhism to develop ¹ That other religions make little of it is deeply significant, maybe, of their more positive outlook ² It is true that Aryans in general can thrill to a negative shibboleth, witness ampta, ambrosia, immortal, but the idea of being spiritually set free is too unworldly to come to the front in any world save that of the recluse

Well then, we have put forward these two features in the gospel of the Buddhist recluse man is not worthily worded, man's well is not worthily worded. The one and the other are negatively worded. The one is declared to be a fiction, the other 'is,' 3 but is entirely ineffable.

And let the apologist of the dual gospel in Buddhism remember this. It is the gospel of the recluse which is and will be looked upon by people of other lands and other creeds as the original, the venerable, the genuine "Buddhism". Not because the layman's gospel is not very worthy, or some later developments no less so. But the Pali canon holds the field yet as the archetype in Buddhist literature. And in it the life, the welfare, the world, of the monk outweighs and dwarfs altogether the life, welfare and world of the 'manyfolk'. With monks as recorders, as compilers, as editors, as 'libraries,' nothing else could well have been expected.

There is yet another defect in wording, intimately bound up with those other two defects. But it is a feature in both gospels. Man wills his 'well'. But in Pali there is no fit appraising of 'will' such as our European Aryan tongues enable us to make. There is the significant approach to it in classing all man's self-expression—deed, word, thought—as activity, as work (kamma). But when the factors of that 'self' are analyzed, dynamic terms, approaching 'will' in meaning, fall into the background, and no discernment is shown of this that to teach religion as a Path to a Goal to be trodden by each man, we must, to make it intelligible, show man as choosing, as willing to walk therein

¹ We only find the notion, as developed, in the Svet and Maitri Up.

² Cf Ency Religion and Ethics on its absence The article Moksa was inserted by special suggestion made to the editor

³ Mln 270 atthi nibbanam ...

But into this defect I have gone elsewhere. Let us keep here to those first two defects

(1) In the tenet called anatta man is not worthily worded. The doctrine was in the first instance a protest, not without reason, against what had become a distorted emphasis in the brahmanic teaching. The 'man,' namely, worded more usually as self or soul, was in fixity, immutability, divinity, identical with the world-soul. Hence he had, not to grow, to werden, to become, he had to come-to-realize. Hence he was not so much a growing plant, as a jewel or star to be cleared of all that hid or dimmed.

But in time this doctrine of protest degenerated into the harmful dogma, never worthily reasoned out,² that the 'man' is, not only not immutably divine, but non-existent; that there is no one who thinks, speaks, acts, but that there is only thinking, speaking, doing It is not just to say, as do some apologists, that this denial of the man was part of the early protest I venture to hold that the early protest was, after a wavering start, the position taken by the founder without the denial. But there can be no doubt about the nuch more negative attitude that grew up among the after-men for one who reads, in a historic perspective, what they came to say

We must read both what they said and between the lines of what they said Pali literature is for us still a very new study. There is too much taking up or rejecting en bloc. The evolution of the brahmin as an animate book, the evolution of the mantras he handed on as such—we cannot get at the base and back of these. But the evolution of the Pali canon, the evolution in its animate libraries—this is of more recent growth. Mainly we can only surmise, yet we can get nearer to the conditions under which the phenomena of Order and of Pitakas came to be and to grow. And we can be more discerning accordingly

We can discern, in the stercotyped, inadequate, ill-fitting anatta riposte, something like an extinct coal, an archaic corpse. It belongs to the early protest, but it is applied to the later denial of the 'man.' It is no more alive, it cannot meet the query of the puzzled listener, so Gotama would have met it had he indeed been the teacher on that occasion. We can discern, how needful it became, to the maintenance

¹ Bulletin of London School of Oriental Studies, 1926 Buddhist Studies, ed by B C Law, 1926

² There is an almost Humean approach to such an attempt in Samyutta, iii, 230

³ Cf Vin, 1, p 23 with p 13, Majjh, 1, 232, Samy, 111, 66

⁴ Cf among many repetitions, e.g., Samy, iii, 94

⁵ Cf *ibid*, p 88 Majjh, 111, 19 f.

of this unworthy wording of the man, to buttress it about and around with every stone of support that could be brought together.¹ We can discern in Buddhaghosa's Commentaries how this succeeded, how argument had died and dogma stood firm. We see the man, who is central in the early gospel as the way-farer, 'you and I' 'faring on, running on' from world to world, the man who to body and mind is as the forest to the faggots, borne thence to the fire, the man who grows or sickens in his karma and who stands after death before Yama (his fellow-man, as were all devas) to be confronted with that karma and judged by it,² this man, the very Thou, neither body nor mind — we see him, in those commentaries, whittled away into a momentary complex of five khandhas We see the current word for his personality attabhāva, 'self-state,' treated as a mere concession to the conventions of the multitude, the 'many-folk' 3

(2) And in the tenet called nibbāna, nibbānadhātu, or asa khatā dhātu, we see 'the well,' the summum bonum unworthily worded However the word be interpreted, it remains a negation and indicates a tendency away from the positive, a tendency to which so many other Buddhist terms bear witness. We may, we should appreciate the reserve in early Buddhism which refused to commit itself to any description of that Goal. Who, at this time of day, is content with the worth of such descriptions in other scriptures? But it does not follow that the ineffable is fitly worded only by a negation. We may rest too easily complacent in the contentment shown by the Indian over his neti, neti! It hints at that racial weakness which found no word for 'will,' whence we derived our 'well,' which never developed its Aryan root war in the way we developed the twin root wal

In other words, what man wills strongly, he tends to name positively. He does not cry 'No-land' when he sights the longed-for sea. That contentment with the notion of riddance rather than with the notion of what we were to put in place of the things got rid of — that contentment said 'not-diseased,' aroga, ārogya, where our stronger positive words say $\dot{v}\gamma ieia$, salus, health, santé And it found a complement to that negation about man's body in a negation about the very man, soul or self, when utterly well In nibbāna is implied extinction of the heat of spiritual fevers. Even the slightly more positive sītibhāva, the coolness of the saint, does but indicate riddance of fever. There is no fit word for the state that is won. 'Growth' we meet with

¹ Esp in Kathā Vatthu, 1, cf Bud Psychology, 1924, ch XIII.

² Devadūta Sutta (M, 111, A, 1).

³ Asl. 308, cf Vis. M 310.

here and there; the notable causative of werden, bhāvanā, we also meet with But when the long work in all that process is consummated, when the man becomes that which he has willed to be, — 'well,' — for this word, daughter of will, we find no name. We do not even find a forced use (as in the Greek $\tau \delta$ $\epsilon \hat{b}$, and my 'the well') of su, to wit su-bhāva. Sotthibhāva does occur, but very rarely, and not with emphasis. Arahatta is weakened to 'worthiness to receive offerings'!

Men cannot eviscerate religion of so much as did Theravāda Buddhism and yet preserve the kernel. That 'will' was badly worded was a national defect which Buddhism did what it could to remedy. But unworthy wording of 'the man' and of his goal was a mistake of its own making. In the far East more positive conceptions somewhat remedied matters. But in Theravāda Buddhism the double negation has survived. And certain features it presents to-day are deepened in significance when we consider them as possible consequences of that survival. For is not this true, that if 'the man' be unworthily worded, the will by which he seeks the ultimate 'well' will certainly be unworthily worded, and that 'well' will be worded no better, will be practically blotted out?

Consider! Theravāda Buddhism negated man, the willer through body and will, and negated any concept of 'well' as willed by a Willer—source, worker, end—of the man—To-day we witness how it has gone on losing substance as a religion, how it has become practically a system of ethics on the one hand and, on the other, a system warding a dead world—dead social eleavage, dead language, dead literature

For the way of the worlds, the larger life of both the seen and the unseen has faded out of its perspective. Its ancient gospel threw open the gates to the long vistas.

Apārutā tesam amatassa drārā!

Around and about its votaries, devas, no longer deities, but fellowmen of other worlds, stood warding, watching, advising, praising, reproving Clairvoyance, clairaudience — to see and hear as could those devas — were not banned as devilish, but were welcomed by it as means of access to fellowmen here and over there Man was shown as wayfarer in a Way, a way not only of present 'best' living, but a four-staged way leading to the goal

All of these opportunities and vistas — all that made his cult a very living *religion*. that is, the having heed to the unseen — the Theravādin has virtually laid on the shelf among the venerable things of his

past. His attention, as layman, is concentrated on this one only of his many lives. The just-so-much as was given him of the way of the worlds in which we are wayfarers he has lost, and he has learnt nothing since wherewith to word it more worthily, more truly.

Or, if he be monk, his forward view is otherwise blurred. For as monk, he has ever worded not only 'man' and his 'goal' unworthily, but 'life' as well—He never had any hope of the life of the worlds, for everywhere that meant rebirth, redeath of the body—And body, he held, was, with mind, essentially 'the man' Hence birth and death stood out over-large, over-fearful—He believed in growth only when the life had been cut off from the general life of the worlds—But surely the growth of 'the man,' is not the way of the growth of any of his bodies. It is the slow advance toward that immortal adolescence, in the consciousness of which growth our worthiest septuagenarians will say. 'I would not exchange my seventy-five for your twenty-five!'

May the faithful and kind scholar-friend, to whom we herewith will well of youth eternal, gladly echo Lord Haldane's recent birthday saying'

Life, man, will, well: herein was weakness, herein lay a falling behind. In all four words we have worthier beacon-lights than early Buddhism had. How are we letting them shine?

What are we doing with our word 'life'? We feel after the life of the race, but we measure the whole life of 'the man' by this one little carth-span and its body. With that body we grow old, and the will, compliant servant, ages with it when 'we' are not even 'grown up.'

What are we doing with our word 'man'? In the school and academy we have thrust him out, replacing him with his instruments, body and mind, measuring his growth by these. In the churches, in the world we speak of him as 'having' a soul, or not, as if he were something else. And when we bury body, we call it him!

What are we doing with the word 'will'? We have put it, in the school, on the shelf. Or we have screwed it down to mean conscious resolve. We refuse to admit that man-as-acting in any way whatever is using will, we do not discern that man's only way to 'the well' lies in will. For will is coming to be, not only coming to do

What have we done with the word 'well'? We have not, even, with our wiser European neighbors, put it on its own feet as noun. We buttress it up with affixes well-being, wel-fare. Then, taking from the meaning where we add to the letter, we tie it down to the body, we tie it down to earth-life, we tie it down to race-betterment. But this is

not so unintelligible a cosmos that we must see in only a stage of racebetterment the uttermost, perfected well of 'the man'. To do this is to reason, believe, hope with our forward view limited to earth. The man, it is true, can only grow towards the immortal youth of his Well by work for the betterment of men. But in all men is 'the man.' And in the perfected well of each man and the way thereto lies the welfare of men.

CHIPSTEAD, SURREY.

BUDDHISTIC MYSTICISM

By E WASHBURN HOPKINS

In considering the question of Buddhistic mysticism it will be well to clear the ground by a preliminary examination of two factors which appear to be of mystical character. But these factors, of which both form essential parts of saintly training and one at least is indispensable to perfection, imply in their turn a belief in Karma, that is, in the incluctable recurrence of transmigration as conditioned by a severe ethical standard, a standard applied not only to physical acts but to thoughts and ideas, though, to the Buddhist, thought itself is physical and, so to speak, a thing

But there is nothing mystical in the doctrine of Karma itself. It is a combination of popular belief in metempsychosis, adapted to a system that recognizes no psyche (for which reason the term metempsychosis should be reserved for Brahmanism, while the Buddhist notion is better expressed by transmigration or rebirth) and the equally popular pre-Buddhistic belief in a theory of future rewards and punishments, adapted to a system that recognizes no divine judge of morality competent to assign rewards and punishments. For general use in the Buddhistic Brotherhood Karma became an automatic ethical force of nature and apparently it was in this form an unquestioned dogma The implication of ordinary ethics is indeed greatly refined in the case of the saint or Worthy (Arahat) who "passes beyond good and evil", but it is by no means set aside, for even the most exalted saint is still under the influence of an ethical Karma, though it must be remembered that to the Buddhist, as to the Hindu generally, wisdom and knowledge are moral qualities But mysterious as appears to us the whole Karma process and incredible as it seems that such a moral power of nature should have been accepted without discussion and even made an imperative article of faith (for faith in Karma and its workings is as explicitly demanded of the Buddhist as is faith in Buddhia), there is yet no more mysticism in the belief than there is in the Brahmanic assumption of God and soul But since the machinery of Karma affects the discussion of mysticism, there remains the important point as to whether Karma was thus accepted as an article of faith from the very beginning, that is in Buddha's own formulation of his creed.

It will probably be conceded that the early discussions and dialogues called Suttas are committed to the belief in Karma and that the

later literature is steeped in the same theory, ostentatiously promulgated in the Jātakas (stories of rebirth as conditioned by previous morals), the Cariyā Pitaka, Peta-vatthu, and so forth; but it has been pointed out that in the most ancient exposition of original Buddhism, that is, in the statement of the Four Noble Truths, there is no explicit mention of Karma and that in the certainly antique theory of the scheme of causation (the Chain or Wheel) there is the same silence. From this has been drawn the rash conclusion that Karma was a theory added on to Buddhism as expounded by Buddha and was not an essential of the founder's own system.

From that conclusion a careful examination of the facts must compel one to dissent The earliest texts we possess contain, in the same form as was accepted later, the doctrine of the Four Noble Truths and scheme of causation and, if the texts are accepted as they now stand, the scheme of causation is as primitive as the Four Noble Truths, although it would still be possible to argue that it was borrowed and adapted from Sānkhya philosophy by Buddha himself. The theory of causation explained in this scheme is, however, absolutely incomprehensible, it is even meaningless, without the implication of ethical transmigration. All attempts made to fit it to a single life or to see in it a cosmic analysis have failed utterly The only possible explanation of the schedule, which begins with ignorance and ends with birth and death, is that it involves the passing over of certain elements of one existence (cause) into another (effect), or, in other words, the doctrine of rebirth. With that doctrine it becomes at least, faulty as it is, a would-be logical series leading from one life to another by a thread of persistent unethical ignorance

But no less clearly do the Four Noble Truths imply belief in Karma, even if the theory be not mentioned. Birth and life are suffering, suffering springs from craving, extinction of craving causes extinction of the suffering entailed by birth and life, this extinction is attained by following the Eightfold Path, of right views and so forth. If this were a solution of the problem how to live one morally excellent life, "birth" might well have been omitted from the list of wocs which the disciple (already born) is here schooled to evade. But, quite apart from this, the whole trend and meaning of the Four Noble Truths are explicitly to prevent the repetition in a future life of the suffering entailed by craving in the present. The existence of an otherwise uncuding Samsāra or round of births is the reason given for the scheme when it is promulgated and this reason cannot logically or historically be disjoined from it. The trance, in which, incidentally, one may see one's

"Previous births," implies the words of Buddha when, envisaging his own demise, he declares that they may be uttered by everyone who holds the Mirror of Truth: "Hell is destroyed for me and rebirth . . . I am no longer liable to be reborn in a state of suffering " And equally cogent is the statement made by Buddha on proclaiming the Four Noble Truths and in closest connection with them. "It is through not understanding and grasping the Four Noble Truths that we have had to run so long, to wander so long in the weary path of transmigration, both you and I. .. By not seeing the Four Noble Truths as they really are, long is the path traversed through many a birth. When these are grasped, the cause of rebirth is removed, the root of suffering is uprooted and there is no more rebirth" (MPS DN ii 91) Again, in the Dhammacakkappavattana, the origin of suffering is given as craving for pleasure and life, which causes "renewal of existence" and the arryo atthangiko maggo or Eightfold Path (called Arvan or Noble) is expressly invented in order to destroy the craving which causes renewed existence. It is impossible to cut these texts to pieces, take out something subjectively regarded as "older" and reject as "later added" whatever does not suit the theory that Karma is an after-thought of Buddhism. Without Karma there would have been no Buddhistic "plan of salvation"

In that plan, morality is indispensable, but only as a preliminary to the age-long effort to eradicate vital misery altogether, not the misery of one life but of countless lives in repeated rebirths. To Buddha salvation was the escape from new existence as animal, man, or godling, for the fate of spirits and gods is to pass away and die like human beings. Their supreme happiness on dying is to be reborn as men, that they may become disciples of Buddha and so be saved from all future existence At the core of all this lies the conviction that the suffering of life entailed by craving (evil craving, usually, but sometimes moral craving, as for chastity), 1 is, to the sage, not the mere unease or discomfort typified by "not getting what one desires" and the distress of poverty or disease, but the absence of any settled condition, of any abiding resting-place "Impermanent are all the beings that come into being, for masmuch as they arise they must pass away." There is no persistent entity underlying phenomena, nothing has substance. To cease from impermanent being, from the incessant becomings typified by rebirths, this is the salvation preached from the beginning by Buddha.

¹ Itiv . 54.

In the course of the training necessary to the attainment of this salvation, the would-be saint or Worthy acquires (this also apparently is the belief of Buddha himself) certain mysterious "accomplishments" and these are the factors referred to above as not really mystical. They are the powers known as Iddhis and those involved in the trances or raptures called Jhanas. The first might well be called magical powers or even divine, since they are expressly said to be the same powers that are exercised by fairies, gods, and so forth, and they are supernatural in that they are above the natural powers of ordinary man, though natural to gods and attainable by superior men. They are not powers restricted among men to the Buddhists, whose saintliness or Worthiness endows them with these faculties, but they are practised, though not so capably, by other religious wizards, who also in part command this "Angelic wisdom" 1 Buddlist adepts can fly through the air, go through earth, on water, turn themselves into other shapes, enter another's body, and so forth Yet these powers are attainable in their highest form only by Buddhistic training in will, effort, thought, and investigation, through a process of "thinking, developing, practising and accumulating" the power involved, that of mind over matter. There must be, to gain this end, earnest and cogent meditation and a constant "struggle against evil" In other words, we have here a refincment on the common superstition arising from exaggerated belief in the mind's control of the body, the superstition that a man of great spiritual (psychic) power must necessarily possess power over matter, usually exploited by a show of physical feats This belief was current among Brahmans and Buddhists, as it was a commonplace of European belief that a wizard could ride the air and a great saint could do supernatural deeds Later Buddhism disapproved of the public exercise of these powers, even if properly gained When used, they tend to make the user vain, they are valueless except for occasional opportunities to impress the multitude with religious marvels (when a Buddha might profitably show off his accomplishments), or for the strengthening of one's own mental growth Like the Eightfold Path they are a proper subject of meditation.2 In the closing scene of Buddha's life it is intimated that he might have utilized the ability to prolong his own earthly existence, if he had been requested to do so in good time Probably the popular belief was that such accomplishments were not so much attained by conscious effort as they were the habitual concomitants of superior wisdom or saintliness, just as the ideal spiritual king possesses

¹ Gandhabba-vijjā, e.g., Thera G., ix, Theri G., vs. 232, and Kevaddha S.

² Thera G, vs 595

"accomplishments" essential to his nature, though these are but the Iddhis of attractiveness, longevity, good health, and universal popularity. In this and other cases, noted by Rhys Davids, the Iddhis are not supernatural; but ordinarily they are powers above the range of common men and shared with gods. As such, in later works, they are joined with the supernatural powers of the "divine ear," of "knowing the thoughts of others," of the remembrance of previous births, and of the "divine eye," as one group under the designation "superior knowledges," Abhiññās, a group attainable by any deeply religious and mentally competent Buddhist (who, at the same time, extirpates all sinful taints) Of one such we read that he became anxious as to his religious qualifications and "strove and wrestled" until he acquired the Abhiññas Another Brother, by virtue of the same powers that he had acquired, picked up two men as they fell from a tree and set them down unharmed. By his Iddhi, Buddha made a boy actually present disappear and then, "by withdrawing Iddhi," made him reappear 1 Such powers were regarded as the natural outcome of the religious life. Thus Matanga's son 2 took orders under Buddha and "seeing the powers wielded by the Brethren he aspired to the same and by practising exercises won the Abhiññas." It is only in very unusual cases that the exercises can be dispensed with Sumana, "a child of seven but of ripe insight" got the powers, so that he could fly through the air cross-legged, as Buddha flies, or at will crosses water "by Iddhi "3 Moggallana, one of Buddha's chief disciples, was at first averse from mental toil, inclined to take the recommendation of silent meditation as excuse for sloth, but being sharply reproved by Buddha with the caustic remark that "laziness is not synonymous with thoughtfulness," he devoted himself to earnest thought and exercises, so that in the end he was pronounced "foremost in Iddhi" by Buddha himself. He could "create living shapes," that is, transform himself into other shapes,4 and he had "visions of the future and of all the present world" 5 like a god's, as Anuruddha, who by Iddhi could remember fourteen precedent births, says of his own power, "My vision, like a god's, is clarified." He then identifies these powers, exemplified by the divine eye, with those of the trance in which one sees beyond mortal ken.

> I know the destines of other lives, Whence beings come and whither they will go, Life here below or other-where of hie— Steadfast and rapt in fivefold trances sunk ⁶

⁴ Ibid, vs 901 (the "body wrought of mind")

The Suttas give the "six supreme knowledges" as follows: 1. Being one he becomes many, becomes invisible, goes without obstacle through a wall, through solid ground, on water, in the sky, touches sun and moon, reaches to the heaven of Brahmā. [These are the usual eight or nine Iddhis] 2. With the divine ear purified and surpassing that of men he hears sounds heavenly and human, far and near. [So by his "ear divine" Buddha hears a conversation miles away] 3. He understands with his mind the minds of other persons and beings and knows the passionate, the bound, the freed, as such. 4. He recalls in all details the various temporary states in which he lived in preceding births. 5 With the divine eye he discerns beings faring according to their deeds 6. He lives in the attainment and realization of sane freedom of heart and mind. These six Abhiññās should be realized by the Worthy, as is said, for example, in the Dasuttara Suttanta.

No check is put upon the exercise of such powers in so far as they subserve the cause of training and are helpful to oneself or to others. The eye divine must itself be purified to give the vision of other worlds and of beings not born of parents (Pāvāsi S), as Buddha when dving saw spirits innumerable crowding so close before him that many occupied the "space of a hair-tip" For edification Buddha in the Pātika Sutta performs wonders, but he knows the deadly peril of such exhibitions in the case of ordinary men and so is made to say "I see danger in the practice of these accomplishments, I loathe and abhor and am ashamed of them" (Kevaddha S), the true "accomplishment she adds] is that of self-mastery" In the same veni, the Vinava lays it down as a law of the order that a Brother "should not display before the lasty the wonders of Iddhi surpassing the power of ordinary men; to do so is to be guilty of an offense" Perhaps, as the late master of Buddhism, Rhys Davids, suggested in connection with this passage, the feeling against the use of wonder-powers was only gradually brought to a point where the practice was forbidden. He might have instanced the parallel in Brahmanism, where it is only the later Yogi who is exhorted not to make a display of his similar powers possess the power is noble; to show off is ignoble"

The "divinc eyc," instead of being acquired by effort, may in extraordinary cases be an innate power resulting from Karma. Thus in the first Buddha, Vipassi, whose name suggests vision, is said to have been manifested the divine eye at birth, for it was "born of the result of his Karma, by which he could see as far as a league by day and by night" (Mahāpadāna S). This is not, as compared with other examples, a very remarkable power, but it is noteworthy in that it is obvi-

ously merely a physical strong sight that is here lauded, whereas usually the divine eye is mental, connoting clairvoyance, and is thus distinguished from the "third eye," which may be rendered "insight." As early as the Upanishads there appears the notion of the "eye turned inward," of which perfected insight is the full capacity and salvation is the result of using it. This corresponds to the Buddhistic "eye of wisdom": "Knowledge is born as the eye of wisdom and by the attainment of this eye one is freed from misery" With the divine eye one "discerns the pageant of beings faring according to their deeds," but with the eye of wisdom one acquires the final absolute knowledge of those Worthics who

Discern what is from what has been, See how to pass beyond the seen Of loathed existence, who desire, As something better, something higher, The end of all existence, where Substance nor birth nor being are ²

This insight is again to be distinguished from that "suffusion of consciousness" whereby one comprehends the thoughts of others As explained in the Dasuttara S and elsewhere, this is the power recognized (or denied to-day) as telepathy, the ability to read the minds of others at a distance If one chooses to call elarvoyance and telepathy mysticism, or to apply the same term to religious faith (in Buddha, and so forth), or to see it in the trance-vision of "infinite space," then there is nothing more to be said. But if one confines the use of mysticism to the meaning of oneness with reality and the power (or desire) to effect it, then it is obvious that these Abbiññas are not powers belonging to mysticism but rather to a simple faith on the one hand and to a groping experimentation with scientific facts on the other. All these powers are developed through a severe course of mental training. They are not mystical gifts but "aecomplishments" painfully gained, on a par with the trance-knowledge which begins with a pleasurable intelligence and passes by degrees into rapt indifference. Final felicity in the trance is attained not by union or communion but by "the knowledge that after this present world there is no beyond."3 In its primitive form the trance adds nothing to the adept's previous knowledge though it leads to higher realms of eonsciousness. It is only in the later psychology that these higher states begin to be grouped around a more persistent ego than is admitted in the earlier texts. The trance is never involun-

¹ Itiv , 61.

tary obsession or seizure or cataleptic swoon leading to union with higher reality or Power, during which knowledge is revealed. The adept "enters spheres of space and reason regarded as infinite" and goes on to "the sphere of nothingness" and beyond that to the sphere "where there is neither consciousness nor unconsciousness," and so finally to a state of suspended perception and feeling, every stage being mastered in order and then in reverse order, so that the saintly adept can "lose himself in any one of them and emerge from any one of them whenever he chooses and for as long as he chooses," as is stated in the summing up of the Mahānidāna S. The final trance is one of absolute equanimity devoid of the sense of sukha and dukkha (well-being, ill-being). A seven-day exercise in this trance-absorption is recommended as bringing the assurance of Worthiness, or at least the assurance that one will not be born again on earth.

The ancient (Vedic) asceticism, which tormented the body to insure spiritual power, is thus replaced by mental discipline Meditation, designed from the beginning of the course of training to attain the result of mastering phenomena, becomes finally a tranquil absorption. In the first stage, the subject experiences a state of "pleasurable interest," with his mind still applied and active. In the second, this merges into a state devoid of pleasure but not without happiness, though now without application of mind In the third stage, a state of serenity supervenes, with "happiness and fixedness of thought" (sukha and cittekaggatā, without pīti, pleasurable interest) In the fourth, there is left a neutral state of sublime indifference Each successive state is (in general) produced by eliminating the inferior elements of the preceding. The pleasurable interest of piti is lost in the succeeding happiness (wellbeing) of sukha and, as the second stage eliminates mental application, leaving only three elements, so the third is characterized only by happiness and attention, and the fourth, devoid of pleasure and happiness, remains as a state of fixed but indifferent attention (the first trance is sometimes subdivided, making five in all).

The effect of this course of trances is first to extinguish all craving, then to consolidate knowledge and produce unlimited happiness (one has part in others' bliss), and finally to bestow absolute tranquillity. Before this final result, are manifested the powers, such as the dibbasota and dibbacakkhu (the divine ear or hearing and divine eye or sight). An ecstatic contemplation devoid of reasoning merges into a sort of intuition (the power of seeing things as they really are) before passing into the deep indifferent neutral state. There are no physical limita-

¹ Mahāsatīpatthāna S, D. N. II. 314.

tions that the adept cannot ignore at will. He not only sees things as they are mentally, but he sees things in earth and heaven and hears all sounds, understands all thoughts, knows the past and present and even (in the case of Buddha) knows the future. He can perform all the "accomplishments" and destroys all evil taints in himself. It is a marvellous and purifying process, but at no point in this discipline or in the exercise of the "accomplishments" does the adept seek either to realize any union with a higher power or to "merge subject and object into one." Not only is no attempt to do this perceptible in the voluminous disquisitions on the trances but it is impossible that the adept should make the attempt, because Buddhism does not admit that there is any subject! The adept waits on no impulse from any exterior power to enter into the meditation called Jhana He himself chooses his time for meditation, enters upon it by means of a mechanical fixation of mind (staring at a circle while sitting in a certain pose and the like), determines in advance when to begin, how to follow out each trancestate, and how to invert the process, eoming back from the fourth (or fifth) trance to the first, and so to come out of his trance-state altogether. Each trance in its several stages is a self-induced state of hypnosis, the end of which is settled before it begins and the content of which before it arrives is already well known. The adept orders himself, before entering the trance, to quit it at a certain time, so many hours or days ahead, and is aware of what will happen in each stage before he enters upon it.

The perfect peace of the final stage is entirely negative. It is the absence of all that makes life worth living, the passing away of all that binds to life, a forctaste of "salvation from existence," of Nibbāna. The only mysticism is that of hypnotism, which, finally is not incumbent on the Worthy, it is a practice which may be dispensed with, though recommended That the primitive Buddhist seeks to free himself from earthly or worldly bonds in order to "unite with the One," or to unite with reality by sinking back into the stream of life is an explanation later than primitive Buddhism It combines the soul-idea with the idealism of a time when Buddha had become a metaphysical abstraction, an Absolute Even as late as the third century BC there is no such theory, only the idea that Buddha was a supernatural being and that man, despite all that Buddha had preached to the contrary, had a sort of soul or persistent individuality. In the Buddhism of the Great Vehicle, a development of the heresics of the Great Congregation of circa 300 B.C., is found the real mysticism of metaphysical theology, Gautama the man being one with a Holy Spirit, who is a form of the

Absolute. But in the records of the primitive Congregation there is no mysticism and nothing to warrant any discussion of the early Buddhist as a mystic seeking to realize himself in a new and wider world. The only mysticism is found in the trance, which is pre-Buddhistic, is not a necessary exercise, and is not really mystic (it connotes no "union with reality" on the part of the subject)

Yet it is commonly accepted that, as Professor Hocking puts it, "Buddha referred all desire to the single craving which he described as the craving for individuality or separateness of being", that, again, in Buddhism the love of power of the Vedantist "has taken the form of an aspiration for metaphysical status with all the power over one's own destiny (and over other men's minds) therein implied," to which Professor Bennett objects that the aspiration seems rather "to be real without qualification" 1 But it is a Buddhistic scholar who has emphasized most strongly this interpretation of the Buddhistic ideal as the overcoming of all "separateness" in mystical union with the One. Rhys Davids in his "American Lectures" says "It is a belief common to all schools of the Buddhists that the origin of sorrow is precisely identical with the origin of individuality. Sorrow is in fact the result of the effort which an individual has to make to keep separate from the rest of existence . . . The unity of forces which constitutes essential Being must sooner or later be dissolved individual has become separate from the rest of existence, then immediately disease, decay, and death begin to act upon it Wherever there is individuality there must be limitation, wherever there is limitation there must be ignorance Men overlook the fact that they are really no more separate than a bubble in the foam of an ocean wave is separate from the sea . It is not separateness you should hope and long for, says the Buddhist, it is union — the sense of oneness with all that now is, that has ever been, that can ever be Leap forward without fear You shall find yourself in the ainbrosial waters of Nirvana and sport with the Arahats who have conquered birth and death "2

Now it is quite true that the Buddhist urges one to renounce the idea of Me and Mine and destroy the false notion of an individuality based upon a permanent substance in the Me But the Buddhist speaks only of imperinanence. "There is no substance, no permanence in any being." To know this is to destroy for one's own good what seems to be permanent, the well-nigh ineradicable root of individuality.

¹ W E Hocking, Human Nature and Its Remaking, pp 75 and 334, C A Bennett, A Philosophical Study of Mysticism, p 52

² Rhys Davids, Buddhism (American Lectures), pp. 124-129

The apparently logical conclusion that individuality implies a sense of separateness and that separateness must again imply desirable union with the rest of existence, oneness with the All, as the goal of effort, is never drawn, and the outcome can be only that there was no such goal, was no such conclusion in the mind of Buddha or in the view of the primitive Congregation.

It is not a matter of logic, applied to what is really the Vedantic (not Buddhistic) view of the soul as a bubble thinking itself different from the sea, as the spark really one with the fire, which leads to the idea of the soul separated from the Real, from God It is a question to be determined on the evidence of the earliest Buddhistic texts, of which a number of examples have already been cited to show that Karma underlies their thought But these same texts show also that in the Buddhism of the primitive Congregation the desirable goal was not union but mastery over Being, to the end that the Worthy (Arahat) should cease to exist There is no real subject, there is no percipient apart from perception. There is only a series of transitory states of consciousness Before death one can by training acquire mastery of intellect and feeling through development of purpose, effort, and so forth At or even before the death of the perfected Worthy all aggregates pass away (Karma no longer works), the elements of individuality cease to be The destruction of individuality is the desired end beeause that destruction automatically destroys the pain of impermanent existence There is no hint that individuality implies "separateness" of any sort The limitations of individuality are of course those of a being conditioned, that is limited, but only by the process of Karma, not limited because separated from any universal One The only One recognized was the one process of birth and death, the stream of being, and from that one the early Buddhist sought to free himself There was too the idea of "separateness," but it is not a sad separateness from a One but a desired and toiled for separateness from the Karmastream, detachment from the world in every sense (complete viveka). One of the means of becoming separate or detached was the practice of tranees and the mastery over matter gained thereby. In the highest trance if anywhere there should be a premonition of the sense of mystic "union, oneness with all," of which Rhys Davids speaks, but, on the contrary, the adept in this final experience, when he is in a state of complete self-possession and equanimity, without pain and without happiness, "sits suffused with a sense of purification, of translucence of heart, so that there is no spot in his whole frame not suffused therewith," and in this state he simply enjoys the "accomplishments," that is, he becomes invisible, duplicates his form, travels cross-legged through the sky, hears all the sounds of heaven and earth, with his divine ear, sees the hearts of others, remembers his previous births, sees with his divine eye other beings and their estate according to their Karma, knows the taints (lusts, and so forth) as they really are, and is thus "set free" and has knowledge of his freedom, his emancipation, and realizes that rebirth has been destroyed and that "after this present life there will be no beyond" This (Sāmañña-Phala Sutta) is one of innumerable passages in which is summed up the fruit of a well-spent life. Such a life leads to "the destruction of all rebirth."

There is not a word suggesting any mystic union with a One or an All On the other hand, at the end of this discourse, which is solemnly repeated in the Kassapa-Sīhanāda, there occurs the following statement "This is the fruit of a Buddhist recluse and there is no fruit of his life higher and sweeter than this," or, as worded in the second discourse: "There is no other state of blissful attainment in conduct and heart and mind which is higher and sweeter than this," namely the attainment of subjugation of evil and of the five modes of intuition characteristic of the perfected saint. A description of the eight stages of deliverance (above) does no more than explain the states of consciousness as apprehension of space as infinite, of the non-reality of things, and so forth, till one reaches the summit of consciousness with the conviction that to think at all is an inferior status, and then sensations and ideas cease altogether. It is not soul that is functioning here but states of consciousness and, since all consciousness is impermanent, when all fleeting states of consciousness ccase there can be nothing left to unite with anything.

In contrast with the limited created state of individual being the texts speak of the state of freedom as uncreated, ajātam and later psychology speculates in regard to consciousness in that state, just as some texts speak of the bliss of Nibbāna in contrast with the misery of bondage. Nibbāna was "a blissful cessation of misery"; hence it became a blissful state after death. It was partly this ingenuous playing with terms that helped to undermine the primitive faith, just as the natural hankering after continued life helped to reestablish the permanent ego under a veiled form, despite the gravity and clarity of the early texts, which refute this interpretation and emphasize the fact that there is no ego and that bliss is merely "freedom from all existence." The many Brahmans joining the first Congregation would perhaps unconsciously shape back to normal the abnormal notion of a life absolutely ending, as they succeeded in idealizing the subjective notion of

time and space countenanced by Buddha, who declares that consciousness has no existence independent of the body, which is impermanent, and that when the intellectual faculties cease, both the individual and the elements cease to be: "The world and the waning and waxing thereof is within this mortal body endowed with mind" ¹

Again, it is not unusual to cite the Ten Indeterminates as proof that Buddha, after all, may have had a dim belief in the ten views which he refused to discuss. But Buddha was surrounded by sophists whose themes were these very problems, considered by him unfit for discussion, such as the duration of the world and of man's soul. In view of his own fundamental thesis that man has no soul, that nothing has any substance, anatta, it is certainly of ose to ask whether his scornful refusal to discuss soul with the sophists may be construed as a tacit admission that man may have a soul and a life after death. If forced to answer, he would have said that, when anyone save a Worthy dies, the elements making for future existence on account of Karma will result in a definite future life, 2 but at the death of a Worthy (who may have already enjoyed Nibbāna) nothing survives. He has "escaped the yoke" and is "devoid of hope", he passes away "without desire for existence or for non-existence" and his Nibbana is "deliverance from all ties "3 The destruction of misery can be attained only by him who comprehends the All, but of what nature is this comprehension? "He that comprehends the All, sabba, and whose thought about it is of renunciation and abandonment, can attain destruction of misery." 4 The Buddhist concerns himself with the All only in the sense that he abandons all lusts "for the purpose of insight and thorough knowledge" 5

The world of the All, as we know it, is itself but a temporary phenomenon, though it is divided into different parts as worlds of radiance, and so forth, but all, including the highest heavens, are transitory. The perfected sage passes out and beyond them all. The Agañña Sutta gives an early Buddhistic view regarding the world of men and its connection with other worlds and with human fate. "When after a very long period this world passes away," there comes later on a rebirth from the world of radiance, of beings born into the new world as human beings. They elect a man to keep them in order and so invent kingship. They settle down to various pursuits and so devise castes [not here as

¹ Subha S , Ang N., 11, 48

² Lohicca S "Wrong views lead to purgatory or animal rebirth"

⁴ Ibid , 7

⁵ Ibid , 36

the result of Karma], namely, priests, soldiers, tradesmen, slaves. When a member of any of these castes lives evilly and has false views (one defect is as permeious as the other), he will be reborn in a temporary hell, but one who has lived a good life and held right views will be reborn in heaven (a bright and happy world); and one who has lived a life of mixed good and evil "will be reborn to suffer both joy and sorrow" (as beast or man), and if, as man in the next rebirth, he has what arc called the "two and thirty lucky marks," these, according to the Lakkhana Sutta, are to be explained as eaused by good deeds in the past (it is not, as usually said, the lucky marks that determine the future) By his inherent greatness Buddha himself, through previous Karma, was first reborn after death in a bright and happy world and then, reborn on earth, acquired the thirty-two lucky marks as the fruit of deeds in his former life, but now in this life, having freed himself from all ties, he says of himself "The craving for future life of any sort is rooted out, that which leads to renewed becoming is destroyed and there is no more birth for me." And what this means is indicated by what was said when Buddha died "He passed away in that utter passing away which leaves nothing whatever to remain " A common formula is that used above, "after this present life there will be no bevond" All parts and powers of a man dissolve and to bring them into this state "is bliss, that is Nibbana" In a word, to citc another pregnant dictum "Cessation of Karma is Nibbāna" Had aught remained in the future, any union or "self-realization," it is incredible that it should have escaped mention in these explanatory utterances

The "misery" of life is often explained in the early texts as no more than simple unease The modern mind is apt to stress the philosophical side of Buddhism or to make the inistake of interpreting early Buddhism in terms of an ethical code It was indeed ethical, because there can be no true knowledge in an unethical nature. This unity of ethies and wisdom is eommon to all Indian thought (though oceasionally denied by extravagant sophists) and is very beautifully formulated in the Sonadanda Sutta. "Where there is uprightness there is widsom, and where there is wisdom there is uprightness, to the upright belongs wisdom, to the wise belongs uprightness, wisdom and goodness are deelared to be the best thing in the world." And it was indeed philosophical, with its persistent elaboration of the thesis "all is impermanent" But it is noticeable how, in teaching men to escape from the condition of impermanence, the emphasis is laid not so much on the misery of impermanence as on the physical and mental suffering involved in living. The Four Noble Truths urge escape not from impermanence but from a permanent condition of bodily pain and sorrow extended through "transmigration's weary round" Karma itself is permanent till one escapes what it enforces, that is, a permanent condition of impermanency!

The three fundamental doctrines of Buddhism, formulated in the words aniccam, dukkham, anattam (impermanence, misery, unsubstantiality), are of course emphasized differently in different passages and it is true that one of these may remain unmentioned while another is propounded and that in general the three together seem to be implied in all statements of doctrine Yet it is rather surprising to find the Four Truths explained in detail on their first promulgation in a form which suggests that the whole weight of Buddha's "discovery" lies in the annihilation of physical and mental misery Birth, old age, grief, suffering, despair, not to get what one desires, all this is painful, all life is painful, a round of such painful lives is only linked misery long drawn out It is nowhere hinted that one may rise to a higher plane of living devoid of misery The only remedy offered is to stop living and so stop suffering Incidentally, it may be added, it is nowhere suggested that life has anything to counterbalance its misery. The Buddhist sees no loveliness in the human body, he is bidden to study it as a disgusting mass of intestines He never asks whether old age may not be happy, whether death is worth crying about, whether happiness is not as common as unhappiness. He sees only ills in life and ignores its joys, as he sees only human ugliness and despises its physical beauty 1

Such a one-sided view of life was evidently not natural. This is shown by the persistence with which it is urged. The disciple had to be drilled into taking life at Buddha's estimate of it. The refuge would be suicide, but, with the implicit belief in Karma, this would be only to prolong the agony. Hence one must learn how to get the better of Karma, how to commit a suicide that would have permanent results; how to escape impermanency of being, which is perpetually reshaped to fresh misery. Thus impermanence of individuality became the greatest ill of all, because hardest to get rid of, but such an ill made its strongest appeal only to the sage. For the mass of humble Buddhist recluses the weight of argument remained rather in the ills of daily life, till the most lowly could solemily recount that, finding it too wearisome to plough and reap, he gladly became converted to a life of monastic ease. We may suspect that it was often these ills that appealed

¹ Cf eg, Theri G, 19, 380, 466

most to the lower orders. Yet it is still remarkable how the sage also treated life's ills as if they were of equal importance. Life is not worth living (a) because it is painful and (b) because it is impermanent. Even in the scheme of causation the note is the same. For instance, at D. N. ii. 32, where are omitted the two elements of ignorance and Karma and the scheme is set for a single life: "From cessation of birth comes cessation of decay, dving, grief, lamentation, ill, sorrow, and despair; such is the cessation of this entire body of ill" (that is, life). Other passages treat impermanence as the great ill; to put an end to impermanence is the goal. "Cessation from rebirth is the escape from what has come into being and is conditioned (because it) has arisen from a cause," 1 a passage that illustrates also the fact that "conditioned" is not "limited by separation" from the All, but is equivalent to "bound in the causal nexus of Karma" (implying rebirth) On the other hand, the once-returner (a sage who has almost "laid low his burden" but has to be reborn once more) is not said to be near the goal of permanence but near the goal of "making an end of sorrow" (life's miseries) One might imagine that the practical pessimism of this attitude sprang from the uncertainty as regards the kind of rebirth, for one is liable to any one of the "five ways of destiny," that is, one may be punished in purgatory, or be born as an animal, or function as a spectre, or be reborn as a man or as a god The decadent Buddhism of later centuries copied a leaf from Brahmanism and avoided any such uncertainty by teaching that a pious gift to a Buddhist or Brahman (the Brahman says a gift only to a Brahman) results in merit enough to escape any except the most desirable lot hereafter, a passage so philosophically naive that it deserves to be cited complete "A moral person may decide by aspiration upon his form of rebirth when he offers a pious gift Such a person may give a gift to a Buddhist recluse or to a Brahman in the shape of food, drink, raiment, and so forth He hopes to receive something for the gift. He sees a nobleman living luxuriously and he thinks, 'Oh, when I die might I be reborn as a wealthy nobleman' He holds this thought fixed in his mind and expands it and this thought of his, set free in a lower range and not expanded to any higher range, conduces to the (desired) rebirth within that lower range. This applies only to a moral person, for the mental aspiration of a moral person succeeds because of its pure single-mindedness" 2 In the same way a moral person may become a god in the next life, if in this life he give a pious gift with this aspiration. But

¹ Dasuttara S.

such puny rewards for earthly generosity are despicable to the sage and were probably a late invention even for the humble and ignorant who were likely to be tempted by them. The reward of course is only for the laity, an inducement to them to be generous to the Buddhist mendicants.

The Dasuttara Sutta gives nine "perceptions to be cultivated" One of them is of the ugliness of life and one is of impermanence and "of suffering in impermanence" The relative value of these perceptions may be judged better perhaps if one turn from the philosophical expositions, where aniccam and dukkham are apt to stand side by side, to the simpler cogitations of the hermits, as voiced in their pious verses. Here there is, as strikes the attention at once, a formal acceptance of the doctrine of impermanence. It is so formal in fact that it occurs repeatedly in the same phrase "thereat arose in me the deeper view, attention to the fact and to the cause," I followed by the statement that the misery of life then became manifest, and there are verses keeping the close connection between the ills of life in terms of pain and of impermanence.

When one by wisdom doth discern and see Th' impermanence of everything in life,
Then one at all life's suffering feels disgust,
Lo! herein hes the way to purity

When one by wisdom doth discern and see

That everything in life is bound to ill,

Then one (and so forth, sabbe samkhārā aniccā dukkhā anattā)

The hermit struggles to convince himself that "mind and body should be held to be ill", then he adds "and understand impermanence to be ill" and cites the words of the Great Physician, who likens the heart (mind) to an ape leaping for fruit uncertainly from tree to tree, with this conclusion

Many and sweet, entraneme, are the lusts Wherein the ignorant majority Entangled he They do but wish for ill Who seek to live again, Led by their heart to perish in the Pit ³

¹ See Thera G, vss 269, 301, 318, 409, 464

² Ibid, vss 676-677

³ Niraye, ibid, vss 1111, seq The poetical translations are taken wholly or slightly changed from Mrs Rhys Davids' Psalms of the Brethren (Theragāthā)

The same poet in a subsequent stanza gives the essence of his thought thus:

Mountains and seas and rivers, earth itself,
The quarters four, the intervening points,
The nadir, yea, and e'en the heavens above —
All are impermanent and all forlorn
Where canst thou then, my heart, find ease and rest 1

Further on in his poem the recluse answers his query by saying that when his mind (or heart) is fully trained it will become "devoid of all craving for any form of future existence" and "pass beyond the stream of being," which means that he will rest happy in the knowledge that his life is absolutely ended for all time. Another poet 2 thus voices his decision (bhaven' amhi anatthiko)

There is no life that lasteth evermore,
Nor permanence in things from causes sprung
The factors of our life to being come
And then dissolve—In that they pass away,
This is their ill—I seek no more to be!

He who has overcome eraving, the poisoner of life, the giver of pain, sits free with mind intent, "rapt in eestasy of thought, and no higher bliss is given to man than this," says Bhūta, whose whole "psalm" is a repetition of this phrase, the meaning of which is as obvious in its implication as in its express utterance. Man's highest felicity is to have the certainty that he will live no more after death. Here, of all places, would have been where one would expect some suggestion of a faith in a life beyond, had the poet who composed the verses been unorthodox enough to harbor hope of this

Yet already such a hope was beginning to spring up, though for the most part veiled in negation such as that of the cheerful rake who squandered all his wealth on a harlot and being destitute repented and joined the Buddhists. He sings how he has given up all desire and is "now faring on to Nibbāna, where at our journey's end we grieve no more," a gacchāma dāni nibbānam yattha gantrā na socati. One sees, Nibbāna has become a place, as it were, to go to, a negation (of sorrow) conceived spatially. The one who renounces the world "destroys its grief and pain" and it was not a far ery to the thought of the "beyond" as another world where all is bliss. A little freedom of translation perfects this and Nibbāna is transformed into a comfortable heaven.

¹ *Ibid*, vs 1133

² *Ibid*, vss 121-122

³ Ibid, vs 519

⁴ *Ibid*, vs 138

⁵ *Ibid*, vs 195

Oh, great, Oh wondrous is Nibbana's bliss, Revealed by Him, the Utterly Awake! There comes no grief, no passion, haven sure, Where ill and ailing perish evermore ¹

Litterally, "very happy indeed, as indicated by the perfect Buddha (awakened), is Nibbāna devoid of grief and passion, peace, where unhappiness disappears" But even to the Buddhist, whose notion in the early texts was never that of "entering" Nibbana as a place, there must have been in such verses the reflection of a dim feeling that Nibbana was not altogether the mere extinction of pain and of existence but had a more positive content From having been the negation of a mortal life of sorrow it became gradually "the immortal not-sorrowfull," nay more, it became "the blissful" because it is "deliverance from sorrow" and "deliverance is bliss" As one who gains the bliss of Nibbāna never returns to sorrow it is natural to call Nibbāna "immortal " The verses of the third century BC (or perhaps a bit earlier, only not so old as the first discourses) show clearly the trend, and the Great Vehicle does but follow this trend when it even ventures to interpret Nibbāna as that flow of being which, as Samsāra, it was invented to avoid! A verse ascribed to Buddha but also allotted to a lesser authority ² gives the original conception

> Whose within this goodly discipline Shall come with diligence to know the truth He birth's eternal round shall put away And end all pain and suffering for aye³

```
    <sup>1</sup> Ibid , vs 227
    <sup>2</sup> Ibid , vs 257
    <sup>3</sup> The text of verses 227 and 257 is as follows
        susukham vata iiibbānam sammāsambuddhadesitam
            asokam virajam khemam vattha dukkham nirujjhati (vs 227)
            vo imasmin dhammavinave appainatto vihessati
            pahāya jātisamsāram dukkhass' antam karissati (vs 257)
```

The usual description of Nibbāna is in terms of present insight and cool happiness or peace and security, yogakhemam anuttaram, santi, when it is not simply the extinction of craving and of life. The positive aspect refers, as may be seen from the Gāthās, to the state of mind attained before death by one confident of post mortem emancipation from further life, one who has "overcome existence". The sense of peace may have been heightened by the less philosophical but practical belief that "existence," if not overcome, entailed torment in hell, but this thought could not have affected the view of the "all but" perfected saints, though such passages as Therī G 451 and 501 show that it was not without significance in their general estimate of life's misery

The appeal here is simply to the feeling of relief from suffering; it offers no hope of future life or of any sort of existence, nor does it lay any stress on the motif of impermanence A certain Gotama, not the Master, in another poem unites the two theses in their natural succession. He says that he became a Buddhist mendicant because he had often suffered of old (in previous lives) both in purgatory and as an animal, not to speak of existences in which he suffered as a spectre (a kind of spirit that is always famished), and after this, "glad enough to be reborn as a man" he still suffered in human form; and even as a god (after his human life) he was not satisfied, for though in successive turns he "lived in the realms between consciousness and unconsciousness," yet to him "all this becoming" (impermanent being) at last appeared "void of real value," so that, on being born as a man again, he turned to his sole refuge santi, peace (escape from rebirth), which is his Nibbāna.\(^1\) The misery in life is recognized first, then the miscry of living.

To the laity it was enough that the Master had said "transient are all existing things" They repeated this formula dutifully while still eagerly seeking "transient things," such as children and wealth. One of the good mendicants sneers at them for doing so, or, as the commentator says, he speaks compassionately of them, in verses which may be freely rendered thus (kāmā aniccā iti)

The word alone but not the thought the pious laity inspires,
Forever saying with their lips "transient are all the world's desires,"
The while they seek the very things they (logically) should despise,
Wives, children, wealth Poor passion's slaves are they, unable to be wise! (vs. 187)

The doctrinc of impermanence did not trouble the laity. They were taught to look for nothing better than a life hereafter in a "bright and happy world," whence they could return to earth again until their hearts were weary of change and they should seek the supreme joy of non-existence. To them apparently the sorrow of life did not overbalance the joy of living. The teaching of the Master in their case was confined to instilling moral rules and somewhat slowly inspiring them with a belief that life was sad rather than joyful. Until the impermanence-doctrine was grasped, the sorrow-doctrine was comparatively unavailing. But neither to the laity nor to the mendicant disciple was Buddha's teaching that of a mystic. In regard to all speculations concerning a future existence he said simply. In the case of the laity (the mentally untrained), if good, they go to heaven; but in the case of the

¹ Ibid , vss. 258, seq

wise who know the truth, there is no use in inquiring whether they exist hereafter, for "such questions implicitly assume the heresy of a substantial ego, of a real self (apart from states of transient consciousness); to believe that one has a self, a soul, permanent, lasting, eternal, which will continue after death, is to walk in the jungle of delusion, and bound in this delusion a man is not free, he is not wise, he is not emancipated from sorrow, he will still go on in the weary round of birth and death." 1

The highest praise given by Buddha to his contemporary Gavampati is that he was a "surpasser of becoming," that is, he had surpassed Karma and passed beyond the state of future existence, praise much higher than that accorded to him by the multitude, who acclaimed Gavampati because he had by his "accomplishment" prevented a river from overwhelming a Buddhist settlement (he stopped the river and "made it rear up like a mountain-peak" 2 To conquer death and life and so to "abolish ill forever" was the goal of the early Buddhist, as Sarabhanga 3 says "The Buddhas who taught the law, and were themselves the law incorporate, showed the abolishment of ill, whereby one at death may become free from rebirth, wholly emancipated" The cessation of becoming is cossation of being, as Sivaka 4 says: "Birth is but woe again, ever again . . . stayed in me now is all further rise of consciousness, blown to nothingness will it be even here" (before I die), words also attributed to Buddha (vipariyādikatam cittam idh 'eva vidhamissatı)

With this agrees the frequent image of the passions and life (for the future) of a perfected saint being "extinguished like a fire." An ingenious scholar, arguing for some spark of future life in the ideal of primitive Buddhism, has entered a plea for it on the ground that Nibbana, the "blowing out," of the flame does not mean complete extinguishment, because the Brahman priest held that fire was an immortal god and when produced by the fire-sticks it was merely called into action again, the fire had been lurking in the fire-sticks. So the Nibbana of the Buddhist may imply a lingering spark immortal still. But, in the first place, the Buddhist Nibbana, as Rhys Davids has shown, refers primarily to the extinction of the very elements (lusts, and so forth) which the adept is bent on destroying utterly and, secondly, the flame of the Brahman's immortal fire is not lurking in a lamp but in the fire-sticks and Nıbbāna refers only to a lamp. No Brahman pricst ever thought that the flame of a lamp was not really out when it was "blown out" One of the Buddhist Sisters says (vs. 116), in order to visualize her final goal. "I press the wick right down

 $^{^1}$ Sabbāsava Sutta 2 Thera G , vs 38 3 Ibid , vs 493 4 Ibid , vss. 183, seq

lout goes the flame]; behold the lamp's Nibbāna!" She has attained freedom from craving, which lights the lamp of life. She certainly does not hope for re-illumination. Mrs Rhys Davids says very truly of the Sisters "Their verses do not seem to betray anything that can be construed as a consciousness that hidden glories. are awaiting them. There is nothing pointing to an unrevealed mystery" Negative evidence of this sort extending over all the earlier literature is a formidable argument against the assumption of primitive belief in any future state whatever in the case of the Arahat He is parinibbuto, "completely extinguished," explicitly as to craving, implicitly as to future consciousness (the fruit of craving) and any state of being.

The temporary states of consciousness (replacing "soul") which represented individuality had to be dispersed in order to the attainment of the Buddhist's goal. At, or before, the final physical death the last element leading to any future life is extinguished. The fleeting states, hitherto forming the imagined ego, have ceased to be, the "hut of self" has been broken up Thoughts and acts still exist in the universe but only as content of the momentary lives of others, they are not "mme", no I exists to think or act. Remove the cause of "becoming" and the very existence of the ego ceases. In the flood of other existence can survive at most only the disjecta membra of the pseudo-ego The individual exists no more, no higher Being exists with which a surviving consciousness could unite and there can be no consciousness (even were there such a Being) when once the maker of consciousness is annihilated. What was once regarded as the subject has been "blown to nothingness" The surviving puggalo of the later psychologists is an abortion born of the desire to fit primitive Buddhism into a system that practically asserts what Buddha categorically denied Nibbāna is freedom and release and only as such does it have a positive content, release from grief and fear for one whose sorrow has been life and whose fear has been that life might continue:

> mokkhamhi vijjamāne idam ajarām idam amaram idam ajarāmaranapadam asokam asapattam asambādham akhalitam abhayam nirupatāpam "'Tis freedom (from desire), release from age, from death, from sorrow, From rivals, crowds, and stumbling, fear, and hurt ¹

EXTASE ET SPECULATION

(Dhyāna et Prajñā)

PAR LOUIS DE LA VALLÉE POUSSIN

L'ANGUTTARA (iii, 355) contient un texte isolé dans la vieille L'Ilitérature bouddhique mais très significatif "Les moines qui pratiquent le recueillement ou extase (les jhāyins) blâment les moines qui s'attachent à la doctrine (les dhammdyogos), et réciproquement. Ils doivent au contraire s'estimer les uns les autres rares en effet les hommes qui passent leur temps en touchant avec leur corps (c'est-à-dire, en connaissant d'une connaissance immédiate, en "réalisant," en "expérimentant," realizing, experiencing) l'élément immortel (amatā dhātu, c'est-à-dire, le Nirvāna), rares aussi ceux qui voient la profonde réalité (atthapada) en la pénétrant par la Prajñā (c'est-à-dire, par la connaissance spéculative qui discerne le caractère vrai des choses)

2. Il résulte de ce texte qu'il y eut conflit entre deux tendances, entre deux écoles, entre deux catégories de moines.

D'une part les hommes du recueillement (samādhi) ou de l'extase (dhyāna, jhāna) — Ils tiennent en médiocre estime la connaissance à proprement parler intellectuelle, le savoir discursif qui élabore une métaphysique, étudie la nature des choses, s'attache aux vérités bouddhiques de la douleur ou de la "production en raison des causes" Toute leur confiance est dans les visions et sensations mystiques qu'on obtient dans les états plus ou moins hypnotiques noinmés "extases" Pour obtenir ces états, une diète sévère et des exercices d'ascetisme (contemplation du cadavre) et d'hypnotisme (fixation du regard, etc) sont indispensables. L'ascète qui les pratique obtient, en même temps que les pouvoirs magiques, l'œil divin, la connaissance de ses anciennes existences, etc. Mais, bien plus précieux, élevé au dessus de humaine nature il entre en contact, au cours des recueillements les plus profonds ("recueillement de la cessation de la pensée et de la sensation") avec cette chose indéfinissable qu'on nomme Nirvāna

Ce vaut là de grands avantages

Les "homines du *dhyāna*" se recrutent nécessairement parmi les moines le mieux placés pour entrer en recueillement "forestiers," qui sont aussi des "hommes du cimetière" et des "pénitents" ces moines vivent à coté de la règle commune, pratiquement dispensés des cérémonies conventuelles, de l'étude, du prêche

Le danger, pour eux, est de chercher l'extase pour l'extase, et confondre l'extase avec l'hypnose L'hypnose n'exige pas la purification de la pensée, la suppression du désir: des recettes mécaniques y suffisent — fixation du regard, suspension de la respiration, serrer les dents et coller la langue au palais Beaucoup d'ascètes croient obtenir par ces procédés les pouvoirs magiques et la possession du Nirvāna le plus grand nombre se fait illusion, car les pouvoirs magiques comme la possession du Nirvāna suppose la sainteté que l'hypnose ne peut donner.

3 Ainsi pensent sans doute les "hommes du dharma," moines fidèles à la discipline conventuelle, ennemis des exagérations ascétiques, qui récitent l'Ecriture, qui prêchent, qui refléchissent sur la nature des choses. Ces moines se souviennent que le Bouddha a défini la sainteté comme "suppression du désir," et expliqué qu'on supprime la soif en étudiant la nature douloureuse et impermanente des objets qui provoquent la soif

Les hommes du Dharma ou "philosophes," condamnent donc les hommes du $dhy\bar{a}na$, ou mystiques.

4. Le Bouddha met tout le monde d'accord — Sans la Prajñā, connaissance des vérités bouddhiques, la sainteté et le Nirvāna sont impossibles D'autre part, les exercices d'hypnose sont très bons. quand ils sont pratiqués par un homme détaché des choses sensibles, ils produisent l'extase (dhyāna) Dans l'extase l'ascète peut prendre contact avec le Nirvāna

Le canon nous apprend qu'il y a deux espèces de saint celui qui est "délivré par la Prajñā," qui, à la mort, entrera dans le Nirvāna; celui qui est "doublement délivré," c'est-à-dire, qui, étant déjà "délivré par la Prajñā," a cultivé les recueillements et pris, dès cette vie, possession du Nirvāna.

Université de Gand

INTEGRATION OF CONSCIOUSNESS IN BUDDHISM

By JAMES HAUGHTON WOODS

DHARMAPĀLA'S comment (P. G. Mundine Piṭaka Press, Rangoon, 1909, p. 214) on Visuddhi Magga, Book vii. 2038, unpublished in America or Europe, throws light on the problem and method of the integration of consciousness as conceived by a Buddhist

What is sought is an insight into the unity which is presupposed in change. A distorted vision of life results if it be assumed that existence consists of independent, momentary, and permanent entities separated by discrete units of time. Our hopes, our feelings, our perceptions, predispositions and activities are obstructive and painful if we clutch at them, as a man might snatch at grasses, reeds, creepers and shrubs which overhang a swift-flowing torrent in which he is swept along (Sanyutta, xx11, 93-4, vol iv, 139-140) Such inconsequential efforts prevent us from grasping the interconnection of all existence, and thus unifying our minds A being who can comprehend the world without segregating it into groups which are incompatible and who can trace the transitions within and without such groups is like the lotus born in the water, standing in the water, yet unspotted by the water This typical being is the Tathagata who is unspotted by the world and not swept away by the stream. In ordinary beings there is the constant effort to attain stability, to overcome inner contradiction, and so to become more organized and more coherent. The Tathagata is not disturbed by the succession of things He is not caught in parts of the mechanism. For he discovers the nature of the mechanism and identifies himself with it. The order of nature stands (Sanyutta, 11, 25), the interrelations are definite, each concretion consists of instances of relations The Typical Being is fully enlightened and understands this and sets it forth and makes it plain An ordinary being who can discern the Tathagata discerns the orderliness and interpenetration of things in time. Keeping the law thus means not breaking the unity of things by errors of judgment. This retention of equipoise extends to internal balance of emotions, passions, and thoughts and to actions and words Without the control of conduct there can be no equipoised mental event, and without poise no insight. The passage in Dharmapāla's comment shows how the interplay of thought, emotions, and actions is required in the higher types of personality.

Ettha ca vijjāsampadāva Satthu paññāmahattan pakāsitan hoti. caranasampadāva karunāva mahattan. Tesu paññāva Bhagavato dhammarajjapatti, karunāya dhammasanvibhāgo; paññaya sansāradukkhanibhida, karunava sansaradukkhasahanan, pannava paradukkhavıjānanan, karunāva paradukkhapatikārârambho; paññāva parinibbanâbhımukhabhāvo, karunāva tadadhigamo, paññāva sāyan tāranan, karunāva paresan tāranan; paññāva Buddhabhāvasıddhi, karunāva Buddhakiccasiddhi, karunāva bodhisattabhūmiyan sansārâbhimukhabhavo, paññaya tattha anabhirati, tatha karunaya paresan abhinsāpanan, paññāya sayan parehi abhāyanan, karunāya paran rakkhanto attānan rakkhati, paññāya attānan rakkhanto paran rakkhati, tatha karunava aparantapo, pannava anattantapo, tena attahıtāya patıpannâdısu catusu puggalesu A 11 95] catutthapuggalabhāvo siddho hoti, tathā karunāya lokanāthatā, paññāya attanāthatā, karunāya c'assa ninnatâbhāvo, paññāya unnamâbhāvo, tathā karunāya sabbasattesu janitânuggaho, paññāyânugatattā na ca na sabbattha virattacittatā, paññāya sabbadhammesu virattacitto, karunânugatattā na ca na sabbasattânugahatāya pavatto Yathā hi karunā Bhagavato sinehasokavirahitā, evan paññā aliankāramamakāravinimuttā ti aññamaññavisodhitā paramavisuddhā gunavisesā vijjacarana-sampadāhi pakāsitā ti datthaban

Here again the range of the Teacher's wisdom is displayed in the perfection of his intelligence, and the range of his compassion by the perfection of his conduct. By this wisdom the Exalted One attains the kingdom of righteousness, and by this compassion he distributes righteousness. By wisdom he desires to be free from the distortions of the round-of-rebirths, by compassion he endures the distortions of the round-of-rebirths, by wisdom he understands the pains of others, by compassion he exerts limiself to find remedies for the pains of others, by wisdom he sets his face towards final deliverance, by compassion he achieves final deliverance, by wisdom he saves himself, by compassion he saves others, by wisdom he attains to Buddhahood, by compassion he brings the actions of a Buddha to perfection — By compassion while in the state of a Future Buddha he was facing the round-of-rebirths, by wisdom he takes no delight in that past life, likewise by compassion lie reframs from producing any fear in others, by wisdom he himself feels no fear of others, by compassion while protecting others he protects himself, by wisdom while protecting limiself he protects others, likewise by compassion lie gives no torment to others, by wisdom lie gives no torment to himself Thus he attains to the state of the fourth type in such a list as that of the four types of man [A, 11 95] Similarly by compassion he becomes Lord of the World, by wisdom Lord of Self, by compassion he ceases to abase himself, by wisdom he ceases to feel pride Likewise by compassion he does helpful acts towards all beings. Because compassion is combined with wisdom, he is not attached anywhere. By wisdom his mind in unattached to any thing Because wisdom is combined with compassion, it operates in helpfulness to all living beings. For just as the compassion of the Exalted One is without all personal attachment or repulsion, so his wisdom is quite free from

vanity and self-reference Thus we should understand that it has been shown that the peculiar excellences of the Exalted One are purified in the highest degree by the perfection both of his intellect and of his conduct.

This integration reaches such fullness and completion in the Typical Being that when one discerns the order of things and their interrelation one discerns Him, and when one discerns Him one is aware of the coherence of all existence

HARVARD UNIVERSITY

L'AUTONOMIE SPIRITUELLE SELON LA PENSÉE INDIENNE

PAR PAUL MASSON-OURSEL

L'EUROPE scolastique a discuté sur la nature des "purs esprits"; elle a tout au moins admis l'existence d'un "esprit pur" — Dieu. En outre les théories de la liberté, depuis Plotin jusqu'à Secrétan et Renouvier, ont eu à cœur de montrer ce qu'il faut enlever ou ajouter à l'homme empirique pour qu'il se réalise en sa véritable essence et, le cas échéant, pour qu'il fasse retour au principe divin

Les deux problèmes ne s'imposèrent pas moins à l'Inde, comme en Occident la religion fraya la voie à la philosophie Mais la religion fut plus une ascèse qu'une théologie, à l'inverse de ce qui se produisit chez nous, le christianisme s'étant moulé très tôt dans la dogmatique greeque.

Si le Bouddhisme n'eût implanté dans la pensée indienne l'obsession de l'esclavage qui résulte de la transmigration, la doctrine des Upanișads eût régné sans conteste elle prétend rendre l'âme individuelle homogène à l'âme absolue par élimination des points de vue relatifs. S'il est permis de s'exprimer en termes spinozistes, disons que nous sommes Dieu non en tant que niodes, mais en tant que substance; et le fait est que substantialité se dit $\bar{a}tmat\bar{a}$ "Celui qui sait" s'assimile à sat, cut, $\bar{a}nanda$ l'être, la pensée, la béatitude

Mais l'idée de transmigration, extra-brahmanique par ses origines, introduisit une toute autre conception. Mérites et démérites acquis au cours des vies précédentes comme pendant cette vie rivent l'individu, selon les Bouddhistes exempt de substantialité, à une existence sans fin. Cependant le savoir, ici encore, ouvre la voie du salut. Il faut comprendre que la transmigration résulte du désir chez qui ne désire rien le karman cesse de s'accroître et, par la simple usure du temps, il s'épuise. Les Jainas précisent que par l'ascèse on en "force." on en hâte la "maturation". D'où un absolu non plus statique et dogmatique comme l'ātman des brahmanes, mais dynamique et négatif, eschatologique et non théologique le nirvāṇa. Ni être, ni non-être, encore moins action; mais absence d'égoisme et par suite extinction de toute relativité. Sat, cit, ānanda n'offrent, pour décrire cet absolu, aucun sens.

Ces deux solutions extrêmes, mais pas si opposées qu'elles ne se concilient dans la notion de brahmanirvana (Gītā II, 72, V, 24), mar-

quent les deux pôles de la spéculation indienne. La gamme des ontologies s'égrène, depuis l'idéalisme des vijñānavādins jusqu'au matérialisme des cārvākas, car il y a mille façons, inégalement réalistes, d'affecter par de la relativité—upādhi, karman, çarīra, etc.—l'existence spirituelle. Pour celle-ci réaliser son intégrité, ce peut être, comme dans les dualismes jaina ou vaiçeṣika, s'isoler de ce qui n'est pas elle, réaliser le kawalyam des Sāmkhyas; et ce peut être échapper à l'illusion, soit parce qu'on s'y soustrait, soit parce qu'on la domine en la comprenant, soit parce qu'on aperçoit qu'on la crée soi-même par ce jeu divin, "la danse de Çiva," réplique hindouiste du nirmānakāya bouddhique.

L'ascèse des yogins mène également à l'une ou à l'autre des solutions extrêmes. Les simples ne voient dans l'affranchissement qu'une purification morale aboutissant, par maintes restrictions et rigueurs, à Dhyāna, samādhi sont des façons de vider la pensée, afin d'atteindre à la paix dans la vacuité Il s'agit moins de sauver l'esprit que de le volatiliser Mais les introspectifs dialecticiens, les yogācāras s'acheminent, à travers des difficultés toujours plus ardues, vers la conquête de "terres" toujours plus précieuses ils défrichent un sentier sur lequel les porte une "méthode," un véhicule Ceux-là n'isolent ni ne suppriment l'esprit, ils le réalisent Ils parviennent au-delà du stade où cet esprit s'oppose à quelque chose d'autre; ils dépassent le bien comme le mal, le vrai comme le faux, mais sans arrêter le progrès dans l'établissement d'une transcendance. Ils n'estiment pas que la négation des oppositions marque le terme de l'effort libérateur cet effort se poursuit en sādhana, en incorporation de l'esprit affranchi dans un monde par lui transfiguré, ou, si l'on préfère, dont il est l'auteur et qui donc est digne de lui. Le transcendant peut redevenir immanent — dehin, carīrin, etc — car aucune boue ne saurait souiller le lotus

Ainsi l'Inde envisage de différentes manières la question que nous lui posons qu'est, ou que fait, ou que devient l'esprit érigé à la possession de sa véritable nature (svabhāva). La réponse est zéro, ou être plus qu'être, ou vacuité — ce qui ne veut pas dire néant, — ou fécondité infinie. Divergences d'ailleurs auxquelles le mystique se montre moins sensible que le logicien, car le plus humble yogin, qu'il soit brahmane ou mādhyamīka, se flatte de posséder tout ensemble la science de l'illusion et des pouvoirs surnaturels par la vertu de ses macérations

L'Inde ne fut jamais assez bouddhique pour renoncer à poursuivre l'absolu; c'est même dans le Bouddhisme qu'elle en a cherché les plus audacieuses approximations Elle ne fut non plus jamais assez bouddhique pour expulser radicalement de sa notion d'absolu l'idée du karman. Quoiqu'il soit surabondamment certain que c'est l'acte qui

asservit, il doit y avoir un acte qui n'asservit pas, mais au contraire traduit l'autonomie spirituelle Au dire des Jainas c'est celui qui s'accompagne de la lecuā blanche, sans aucune coopération des facteurs matériels de vie Selon les Bhāgavatas c'est le svadharma de chacun d'après sa caste, si on l'accomplit sans égoisme, par amour pour Bhagavat. Dans les doctrines d'époques diverses apparues sur les confins iraniens, c'est la luminosité propre de l'âme, que de l'opacité peut voiler, mais que rien ne saurait éteindre, et qui, exaltée, devient splendeur immesurable, amitābha, en une transposition imagée des théories européennes sur l'argument ontologique, disons que cet éclat se manifeste lui-même en manifestant les ténèbres. Prestigieuse métaphore solaire, aussi indienne que gnostique, et qui symbolise à merveille l'efficace de la connaissance l'atman ou le vijnana, comme le vovs d'Aristote, est en principe toutes choses, quoique des conditions de fait restreignent sa portée les Vaicesikas expriment cette vérité en compensant l'omniscience de l'atman par l'atomicité du manas, organe nécessaire de toute perception

Sous ce biais coincident l'être et la pensée en leur réalité suprême, comme l'existence sensible (dharma) est l'objet naturel de l'esprit empirique (manas) Tant vaut la connaissance, tant vaut l'être, l'une et l'autre sont des aspects de l'action. L'actc absolu est celui qui existe en droit, l'activité relative celle qui existe en fait Asservis en fait, nous sommes libres en droit, si nous ne méconnaissons pas notre essence Ce qui oppose, pour parler comme la philosophie européenne, l'existence à l'essence, c'est le poids du karman accumulé. Ce karman. à la différence du sémitique péché originel, s'use pendant que le temps s'écoule, quoiqu' à mesurc il sc reconstitue, sauf chez le délivré-vivant (jīvanmukta). D'autre part, à la différence de l'υλη des Grecs, il ne représente nullement la contre-partie logiquement nécessaire de l'énergie propre à l'intelligible alors qu'Aristote ne pouvait admettre de formes sans matière, l'Inde conçoit des dharmas immatériels, cakti ne recouvre pas δύναμις Pour nous soulager du fardeau karmique vertu et intelligence suffisent, tandis qu'ailleurs seul un Dieu peut effacer la tare primordiale et faire de l'homme un élu. Pour amener à l'existence les phénomènes c'est assez qu'entrent en jeu les conditions de la pensée empirique, point n'est besoin d'une volonté divine qui se surajouterait à l'entendement parfait Ces raisons dispensent la spéculation indienne d'élaborer une théologie, ou, lorsque les sectes en exigent une, inspirent une théologie autre que celle d'Occident Toutes ces différences résultent de ce que l'esprit tel que l'Inde le conçoit, au lieu de combiner des "idées," des "images" relativement extérieures à lui, comme nous le

préjugeons traditionnellement depuis Socrate, Platon — et Démocrite, consiste en une fonction opératoire, créatrice de ses objets. Artha ne désigne-t-il pas le terme provisoire d'un processus, un but, une fin, au lieu de connoter une substance, une chose étrangère à l'intelligence? L'Inde se joue de la contradiction. De même qu'à ses yeux le dharma ne tend qu'à se rendre inutile, elle n'a dénoncé la servitude du karman que pour faire saisir quelle "vérité" appartient à l'acte par excellence, celui qui dans l'autonomie comprend et crée. Quelque information sur l'indianité fait croire que cette civilisation n'a en qu'une théorie négative de la délivrance, une initiation plus profonde montre que là-bas aussi, que là-bas surtout l'absolu fut liberté

Université de Paris

MĪMĀMSĀ UND VAISESIKA

By HERMANN JACOBI

DAS Mīmāmsā Sūtra unterscheidet sich in einem wichtigen Punkte sehr wesentlich von den ubrigen philosophischen Sūtras wahrend nämlich diese darauf angelegt sind, die betreffenden philosophischen Systeme vollstandig darzustellen, finden sich nur wenige philosophische Grundsatze im Mīmāmsā Sūtra, und zwar im ersten Adhvāva, vornehmlich in dessen erstem Pāda, der darum den Namen Tarkapāda führt, die ubrigen elf Adhyavas aber haben eine ganz andere Aufgabe: sie lehren die Grundsatze, nach denen aus den oft unbestimmten, ja zuweilen widersprechenden Vorschriften der Brähmanas und Samhitäs die richtige Darbringung des Opfers festgestellt werden soll Es ist das keine Philosophie im eigentlichen Sinne Die Mīmāmsā-Philosophie, wie sie als eins der sechs philosophischen Systeme bekannt ist, hat nicht den Verfasser des Sütra zum Urheber, sondern ist durch die Tätigkeit seiner Kommentatoren ins Leben gerufen worden Grundlage bilden die philosophischen Erorterungen des alten Vrttikāra, welche Sabarasvāmın im Bhāsya zu MS 11,5 zitiert oder vielleicht nur im Auszuge mitteilt Der Verfasser der alten Vritti ist nicht wie Keith meint,2 Upavarsa, da er diesen als eine Autoritat anfuhrt, wegen seiner Polemik gegen den Sünyaväda muss er spater als 200 n. Chr geschrieben haben 3 Das vollstandig ausgebaute System der Mīmāmsā-Philosophic gehort einer viel spateren Zeit an, es hegt in zwei Fassungen vor, die in manchen Einzelheiten von einander abweichen, als Gurumata des Prabhākaraguru, der etwa um 600-650 n Chr. anzusetzen 1st,4 und als Bhattamata des Kumārilabhatta, der wahrscheinlich in der ersten Halfte des 8 Jahrh in Chr. lebte.

Der Gegenstand des MS, dem etwa 14 Funfzehntel des ganzen Werkes gewidmet sind, ist, wie oben angedeutet, eine technische Disziplin der Opferpriester Diese Disziplin muss sehr alt sein, so alt wie das vedänga Kalpa; denn ohne die in ihr entwickelten Grundsatze der Auslegung der Brähmana und Samhitā zur richtigen Ausfuhrung

¹ Als Sigel für die philosophischen Sütra bediene ich mich hier wie in J A O S. xxxi, p 1 ff, der Anfangsbuchstaben ihrer Namen Mimämsä Sütra, Brahma Sütra, Vaisesika Darsana, Nyāya Darsana, Yoga Sütra

⁴ Keith, *l* c, p 9, n. 2

des Opfers hatten die Kalpasütra nicht abgefasst werden können. Thibaut (Arthasamgraha, p. vi) definiert diese Disziplin: "as a body of rules enabling us to construct on the ground of the Veda a Kalpasūtra or pravoga" Diese Arbeit war aber bereits geleistet vor der Zeit unseres MS; denn dasselbe erortert i 3, 11-14 (im Kalpasūtrasvatahprāmānyâdhikarana), die Frage, ob das prayogaśāstra autoritativ sei, und entscheidet dagegen. Daraus folgt, dass das MS weniger einem praktischen Interesse dient, als einem theoretischen. Dies zeigt sich auch darin, dass in 1hm nicht wie in anderen vedischen Disziplinen die Lehrsatze einfach vorgetragen, sondern nach einem feststehenden Schema (pūrvapaksa, uttarapaksa, siddhānta) diskutiert und bewiesen werden. Diese Methode der Diskussion im MS. pragt der Mīmāmsā den Stempel einer spekulatīven Wissenschaft auf, die wohl Anspruch darauf machen konnte als eine Art von Philosophie betrachtet zu werden So ist es verstandlich, dass ihre Anhanger den Antrieb empfanden, die wenigen philosophischen Grundsatze im MS. zu einem vollstandigen philosophischen System auszubauen

Wenn wir nun untersuchen wollen, welche Stelle die Mīmāṃsā in der Entwicklung der indischen Wissenschaften einnimmt, mussen wir in erster Linie unsere Aufmerksamkeit auf die philosophischen Lehren richten, die im 1. Adhyāya des MS erortert werden und die theoretische Grundlage des Ganzen bilden Es handelt sich zunachst um folgende zwei aufs Engste miteinander verbundene Grundlehren: (1) Zwischen dem Worte und dem, was es bedeutet, besteht eine uranfangliche (d h nicht zeitlich erst eingetretene) Verbindung i 1, 5 autpattikah śabdasyâ 'rthena sambandhah (2) Das Wort (und überhaupt der Ton) ist ewig, d h das Wort ist immer und überall latent vorhanden und wird, wenn es ausgesprochen wird, nicht allererst zum Dasein (durch utpatti), sondern nur zur Erscheinung (durch abhivyakti) gebracht, i 1, 6–23.

Ich erwahne hier noch ein weiteres sprachliches Problem, namlich ob das Wort das Individuum (dravya) oder die Species ($\bar{a}krt\imath$) bedeute, welche Frage i 3, 30–33 erortert und im letzteren Sinne entschieden wird.

Aus den beiden ersten Grundsatzen, welche die Ewigkeit des Wortes und seiner Verbindung mit dem, was es bedeutet, lehren, folgt, dass der Veda von Ewigkeit zu Ewigkeit besteht, gewissermassen als das ewige Weltgesetz. Das begründet die unbedingte Gültigkeit seiner Vorschriften, auf denen der dharma beruht (codanālaksano dharmah i 1, 2). Die Autoritat des Veda wird durch seine Ewigkeit gewahrleistet und nicht etwa dadurch, dass die hochste Gottheit, der

Iśvara, den die Mīmāṃsakas leugnen, sein Urheber sei. So dient also die Lehre von der Ewigkeit des Wortes als theoretische Grundlage für die theologische Disziplin, welche den eigentlichen Inhalt des M.S. bildet. Aber letzterer macht keineswegs jene Lehre notwendig. Denn auch bei der entgegengesetzten Theorie, namlich dass der Isvara den Veda verkundet habe, was die Yogins annahmen, wurden die in Adhy. ii-xii des M.S. aufgestellten Regeln und Grundsatze fur die Auslegung der Brähmana zur richtigen Darbringung des Opfers unverminderte Gültigkeit haben. Die technische Disziplin hatte offenbar schon lange bestanden; denn sie war unentbehrlieh fur die Opferpraxis. Erst nachtraglich empfand man das Bedurfnis, sie auf eine theoretische Grundlage zu stellen. Und wir erfahren aus MS 11, 5, dass es Bādarāyana war, der sieh zu der Ansieht von der ewigen Verbindung des Wortes mit seiner Bedeutung bekannte Bedenkt man nun, dass die Interpretation der Brähmanas zum Behufe der Opferpraxis den Ausubern dieser Kunst keine dringende Veranlassung gab, das metaphysische Wesen des Wortes zu ergrunden, so liegt die Vermutung nahe, dass sie die Anregung zu derlei Spekulationen von anderer Seite empfingen Nun finden wir dieselben oben angefuhrten Grundsatze, welche im MS aufgestellt werden, auch bei den Grammatikern Katyayana beginnt sein Värttika mit den Worten siddhe sabdarthasambandhe, diese gibt Patanjali mit Auflosung des Kompositum also wieder: siddhe sabde 'rthe sambandhe cê 'ti, 1 und erklart siddha, mit nitya Der Sinn ist also. "Das Wort, seine Bedeutung und die Verbindung beider sind ewig" Im Samgraha, sagt Patañjah, werde die Frage diskutiert. ob das Wort nitya oder kārya sei, und zugunsten von nitya entsehieden 2 Kaivata bemerkt hierzu, dass der Samgraha ein besonderes Werk (granthaviśesa) sei, und Nāgeša gibt an, dass Vyādi es in 100000 Śloken verfasst habe. Bhartrhari im Vākvapadīva nenut das Mahābhāsva Samgrahapratikañcuka 3 Am Schlusse seiner Diskussion im Mahābhāsya 4 entscheidet sieh Patañjalı dafur, dass nitya nieht nur das unveranderlich Ewige bedeute, sondern auch das Beharrende, dessen Wesenheit nicht zugrunde gehe tad api nityam, yasmims tattvam na vihanyate Kim punas tattvam? tadbhāvas tattvam āk rtāv api tattvam na vihanyate "Auch die Species (ākrti) als solche geht nicht zugrunde" Dies fuhrt uns zur dritten der oben angefuhrten Lehren im MS, namlich, dass das Wort die Species bedeute. Kātyāyana erortert zu i 2,

¹ Mahābhāsva, ed Kielhorn, vol 1, p 6, l 2

² Ibid, p 6, l 21

⁴ L c, p 7, 1 21 f

64 v. 33-59 die Frage, ob das Wort das Individuum (dravya = vyakti) oder die Species ($\bar{a}k_{1}ti = j\bar{a}ti$) bedeute. Die erstere Ansicht vertrat Vyāḍi (v. 45), letztere, der Kātyāyana zustimmt, Vājapyāyana (v. 35).

Es steht also fest, dass die Lehren bezüglich des Wesens und der Bedeutung des Wortes sowie der Verbindung beider bei den Grammatikern mit den in MS. vorgetragenen durchaus übereinstimmen. Dafur, dass sie bei den Grammatikern entstanden seien, lässt sich anführen, dass sogar schon vor Yāska die Frage, ob das Wort ewig oder nicht ewig sei, diskutiert worden zu sein scheint. Er erwähnt namlich und verwirft die Ansicht des Audumbarayana, nach der das Wort *indrivanitya* sei, innerhalb des Sinnesvermogens (des Menschen) Bestand habe, d h. nur in dem horbaren Laute. In der grammatischen Literatur zwischen Pānini und Kātvāvana, die nach des Letzteren Andeutungen ziemlich bedeutend gewesen zu sein scheint, wurden die betreffenden Probleme weiter erortert und Patañjalı zieht dann das oben angegebene Fazit. Die Vermutung liegt nahe, dass die Fragen uber das Wesen des Wortes zuerst von den Grammatikern aufgeworfen worden sind. Aber dass die Mīmāmsakas die betreffenden Lehren von jenen entlehnt haben, kann nur eine genauere Untersuchung wahrscheinlich machen. Zunachst lasst sich zeigen, dass zwischen beiden genannten Gelehrtenkreisen eine engere Beziehung, bestehend in der wechselseitigen Rucksichtnahme der einen auf die Begriffe der anderen, obgwaltet habe Einerseits namlich werden im MS. i sprachliche Fragen mit besonderem Interesse erortert; ausser den anfangs hervorgehobenen drei Grundsatzen wird in 13, 24-29 über die apabhramśas und Kasusverwechslungen, 1, 3, 8-10 uber Mlecchaworter, 1 1, 24 ff. über die Entstehung des Satzsinnes gehandelt Darum werden die Mīmāmsakas, die in ihrer speziellen Disziplin es nur mit vākya zu tun haben, dennoch als padavākya pramā nama bezeichnet. Anderseits berücksichtigt Kätvävana Vorstellungen der Mīmāmsakas in seiner Erorterung über die Bedeutung des Wortes, so bezieht er sich zu i 2, 64 in v. 44 u. 47 auf die codanā (vedische Vorschriften) und in v 39 auf das Dharmaśāstra.

Betrachten wir nun die Diskussion über die oben genannten Grundsatze bei den Grammatikern eingehender. Kātyāyana erkennt die Ewigkeit des Wortes an (nitye śabde), ohne sich näher darauf einzulassen. Durch Patañjali erfahren wir, dass dieses Problem im Samgraha, als dessen Verfasser Vyāḍi gilt, erortert und entschieden worden sei. Da aber dieses Werk uns nicht erhalten ist, so bleibt natürlich unentschieden, ob die Diskussion in M.S. i 1, 6-23 auf ihm beruhte oder

¹ Liebich in ZDMG, Neue Folge Bd 2, p 211

originell ist. — Die Frage nach der Ewigkeit der Bedeutung (artha) wird von Kātyāyana nicht unter diesem Titel behandelt; ihre Beantwortung ergibt sich aber aus seiner Untersuchung über die Bedeutung des Wortes i 2, 64 v. 35–59. Wie schon oben angegeben, stehen sich zwei Ansichten gegenüber, nach der des Vyādı bedeutet das Wort das Individuum, nach der des Vājapyāyana die Species. In der alten Terminologie, deren sich Kātyāyana durchaus bedient, sowie auch das M.S. an der betreffenden Stelle, wird Individuum mit dravya, Species mit ākrti bezeichnet. Bei den Philosophen und überhaupt den spateren Schriftstellern sind dafür die Ausdrücke vyakti und jāti (sāmānya) üblich geworden. Es ist nun beachtenswert, dass sich Patañjalı neben der alten auch der neuen Terminologie bedient. Das dürfte darauf hindeuten, dass er jünger als der Verfasser des M.S. ist.

Die Untersuchung über die Bedeutung des Wortes hat nun bei Kātyāyana folgenden Verlauf. Zuerst werden v. 35-44 fur Vājapyāyana's Ansicht, dass das Wort die Species bedeute, mehrere Grunde geltend gemacht. Dann (v. 44) tritt der Verteidiger von Vyāḍi's Ansicht, dass das Wort das Individuum bedeute, auf mit zwei Grunden für dieselbe (v 46, 47) und funf Einwanden gegen die des Gegners, (v. 48-52), von denen der erste eine grossere Tragweite hat und sich gegen die selbständige Existenz der Species richtet. Dagegen zeigt dann der Anhanger Vājapyāyana's, dass die vom Gegner fur seine Ansicht angeführten Tatsachen sich ebensowohl erklaren lassen, wenn das Wort die Species bedeutet (v 53-55), und widerlegt dann die gegen dieselbe erhobenen Einwande einzeln in derselben Reihenfolge (v. 56-59)

Viel kurzer wird derselbe Gegenstand in M S i 3, 30-35 behandelt. Im Pūrvapaksa werden drei Grunde dafür angefuhrt, dass das Wort nicht die Species bedeute, sondern das Individuum, und diese werden im Uttarapaksa widerlegt. Die Diskussion, für die nur die sütras, nicht das viele Jahrhunderte jungere Bhāṣya in Betracht kommen dürfen, bewegt sich ganz im Ideenkreis der Mīmāmsakas; die von Kātyāyana vorgebrachten grammatischen Grunde bleiben unberucksichtigt. Dem Verfasser des M.S ist die Existenz oder Subsistenz der Species eine ausgemachte Sache, er scheint die Kontroverse vorgefunden und seinen Standpunkt gemass seiner Lehre von der Ewigkeit des Wortes gewählt zu haben. Dagegen macht die Darstellung der Kontroverse bei den Grammatikern den Eindruck, dass sie auf ihre Urheber zurückgehe.

Die von Kātyāyana v. 48 erwahnten Grunde gegen und fur die Annahme, dass die Species gesondert neben oder über den Individuen bestehe und in ihnen zur Erscheinung gelange, haben für unsere Untersuchung ein besonderes Interesse, wie sich in weiteren Verlaufe zeigen wird Der Gegner macht v. 48 (naî 'kam anekâdhikaranastham yugapat) geltend, dass, wenn es nur eine Species gabe, sie doch nicht in allen ihr zugehorigen Individuen gleichzeitig erscheinen konne, was Patañjali damit erläutert, dass der eine Devadatta nicht gleichzeitig in Srughna und in Mathurā sei. Die Widerlegung dieses Einwurfes erfolgt in v 56, das ich hier mit Patañjali's Erklarung in Text und Paraphrase wiedergebe. naî 'kam anekâdhikaranastham yugapad ity ādityavad visayah ("Mit der Behauptung, dass) sich ein Ding nicht an mehreren Orten gleichzeitig befindet, damit verhalt es sich wie mit der Sonne."

Patanjali na khalv apy ekam anekâdhıkaranastham yugapad upalabhyata ity ādityavad visayo bhavisyati; tad yathā: eka ādityo 'nekâdhikaranastho yugapad upalabhyate. — "visama upanyāsah: naî 'ko drastâ 'nekândhikaraastham ādityam yuqapad upalabhate." — evam tarhi:

ıtî 'ndravad vısayah

tad yathā: eka Indro 'nekasmın kratuśata āhūto yugapat sarvatra bhavatı. evam ākṛtır yugapat sarvatra bhavısyatı.

"Dass nicht ein Ding an mehreren Orten gleichzeitig gesehen werde, damit wird es sich verhalten wie mit der Sonne Namlich die eine Sonne wird an verschiedenen Stellen gleichzeitig gesehen. 'Diese Erklarung passt nicht auf unseren Fall, nicht ein und derselbe Beobachter sieht die Sonne gleichzeitig an mehreren Stellen 'Dann muss man(statt ity ādityarad visayah) sagen. iti 'ndrarad visayah. damit verhalt es sich wie mit Indra Namlich ein und derselbe Indra, der bei mehreren Hunderten von Opfern gleichzeitig angerufen wird, ist an allen gleichzeitig zugegen. So wird auch die Species gleichzeitig überall sein."

Daraus ergibt sich als die Sachlage folgendes Man hatte den Genusbegriff nicht als eine Abstraktion aus den ihm untergeordneten Individuen erkannt, sondern dachte sich die Genera als transzendente Weschheiten von ewiger Dauer (generalia ante rem bei den Scholastikern) Jedes Genus (oder jede Spezies, was die in ākrti liegende Vorstellungsweise besser andeutet), tritt mit allen Individuen in Verbindung und hat nicht in ihnen seinen Sitz (avināšo 'nāšritatvāt v. 57). Die Spezies, z B Kuh, ist nur eine, der individuellen Kuhe gibt es zu allen Zeiten eine unbeschrankte Anzahl, wie ist es aber denkbar, dass die eine Species gleichzeitig mit allen in Verbindung stehe, also gleichzeitig an vielen Orten sei? Man verwies deshalb auf die Sonne, die auch nur eine ist, aber uberall zu sein scheint, Mit dieser Erklarung gab sich Kātyāyana zufrieden. Patañjali aber fand, dass die Analogie

mit der Sonne zutreffend sein würde, wenn derselbe Beobachter die Sonne gleichzeitig an mehreren Stellen sähe. Das ist aber nicht der Fall, deshalb kann mit der Sonne das fragliche Verhaltnis nicht erklärt werden, und darum erklärt er es mit Indra's gleichzeitiger Gegenwart an vielen Opferstellen. Der Punkt, auf den es hier ankommt, ist der, dass Kätyäyana einer Erklarung zustimmte, die Patañjali als unzutreffend beiseite schiebt

Den eben behandelten Gedankengangen ganz ahnliche finden sich auch in der Mīmāmsā, zwar nicht in der Untersuchung uber die Bedeutung des Wortes, sondern in der über seine Ewigkeit Gegen dieselbe wird im Pūrvapaksa M S. i 1, 9 (sattvântare ca yaugapadyāt) geltend gemacht, dass dasselbe Wort gleichzeitig an verschiedenen Orten gehort werde, es ware aber unmoglich, dass, was nur an einem Orte ware, an verschiedenen Orten erschiene Das ewige Wort ist geradeso wie die Spezies nur eins und soll doch allerorten sein Darum ist die Antwort auf den Einwurf dieselbe hier wie dort; ādityavad yaugapadyam, i 1, 15. "Mit der Gleichzeitigkeit verhalt es sich wie mit der Sonne "Hier haben wir also die unklare, im einzelnen nicht durchgedachte Analogie, die auch dem Kätyävana genugt hatte. Darum halte ich, namentlich in Verbindung mit den fruher angeführten Indizien, die Folgerung für berechtigt, dass der Verfasser des M.S. und Kātyāyana derselben Periode angehoren, und dass die Abfassung des M.S. nicht spater als Patanjali anzusetzen sei, vielmehr etwa zwischen 200 und 300 v. Chr.

Zum Schlusse dieses Abschnittes muss noch eine Textschwierigkeit im Mahābliāsva erortert werden. Dieselbe Stelle des Mahābhāsva zu 12, 64, v 56, die eben behandelt wurde, steht namlich schon vorher p 243 Doch lautet das vor dem bhāsva stehende vārttika hier: asti caî'kam anekâdhikaranastham yuqapat, und die Worte itî 'ndravad visayah, welche an der zweiten Stelle die von Patañiali vorgeschlagene Verbesserung enthalten, erscheinen hier nach Kielhorn's Annahme als zweiter Teil des värttika, der also vom ersten durch ein Stuck des bhāsya getrennt ist. Das ganze vārttika wurde somit lauten: asti caî 'kam anekâdhıkara nastham yugapad ıtî 'ndravad vısayah. In dieser Form bietet das vārttika weder syntaktische noch sachliche Schwierigkeiten. Man versteht dann aber nicht, weshalb Kātyāyana es nicht auch an zweiter Stelle in dieser Form gebracht habe, sondern in einer, die mit jener verglichen eine entschiedene Unrichtigkeit enthält. Ich nehme darum an, dass an erster Stelle das vārttika (40) mit bhāsva ein spaterer Zusatz ist, vielleicht auch v. 41, sodass sich dann v. 42 in naturlichem Zusammenhange an v. 39 anschliesst. An zweiter Stelle (v. 56) aber kann das vārttika nicht entbehrt werden, da es die Erwiderung auf den Einwurf in v. 48 enthalt.

Der Lehre von der Ewigkeit des Wortes musste der Umstand ein besonderes Gewicht verschaffen, dass sich die beiden angesehensten Gelehrtenklassen des alten Indiens zu ihr bekannten. Die Grammatiker galten namlich von je als die ersten Gelehrten (prathame hi vidvāmso vaiyākara nāh, vyākara namūlatvāt sarvavidyānām. Dhvanyāloka, p. 47), und die Mīmāmsakas, denen man die ehrende Bezeichnung padavākyapramānajña beilegte, durften ihnen als Gelehrte im Range nicht viel nachgestanden haben: denn die streng wissenschaftliche Methode, wie man wohl ihre Erorterung der Gründe pro und contra zur Feststellung jedes Lehrsatzes nennen muss, handhabten sie mit gleicher Meisterschaft. Aber trotzdem erhob sich gegen die Lehre von der Ewigkeit des Wortes eine heftige, und abgesehen von den Grammatikern und Mīmāmsakas uberall siegreiche Opposition. Dieselbe ging aus, soviel wir sehen können, von den Naturphilosphen und Buddhisten. Erstere hatten die physikalische Natur des Schalles erkannt, womit die Lehre von der Ewigkeit des Wortes unvereinbar ist, und letztere stimmten ihnen bei, weil nach ihrer Grunduberzeugung es kein ewiges, unveranderlich Seiendes gibt (ausser den asamskytadharmas: Raum und zwei Arten von nirodha 1). Die so aufgeworfene Streitfrage scheint lange die wissenschaftlichen Kreise Indiens aufs lebhafteste interessiert und erregt zu haben, wie sehr, ersieht man nach der zutreffenden Bemerkung von E. Abegg² schon daraus, dass in der indischen Logik eines der gewohnlichsten Schulbeispiele fur den Schluss der Satz von der Nichtewigkeit des Tones, und fur den Fehlschluss der von seiner Ewigkeit bildet. Die Erorterung dieses Gegenstandes in dem M.S hat noch, ich mochte sagen, einen akademischen Charakter, und vermutlich war es ahnlich auch im Samgraha des Vyādi gewesen, Aber den grossen Fortschritt in der Erkenntnis brachten erst die Untersuchungen der Naturphilosophen. Wir lernen sie zuerst kennen aus dem Vaisesika Darśana des Kanāda Bevor ich aber die einschlagigen Stellen des V.D. bespreche, muss ich eine Bemerkung über unser Verstandnis dieses schwierigen Textes vorausschicken.

Die Erklärung des V.D. beruht nicht auf einer alten, ununterbrochenen Ueberlieferung Die Bibliotheca Indica Ausgabe des V.D. von Jayanārāyaṇa Tarka Pañcānana (1861) enthalt den Kommentar des Sankaramiśra (etwa 17. Jhd) und den des Herausgebers. Ein

² Festschrift für Wackernagel, p 225

³ Vgl Keith, Indian Logic and Atomism, p 35 f.

noch jüngerer Kommentar ist der des Candrakanta Tarkalankara, Calcutta 1887. Alle diese drei Kommentare widersprechen einander in der Erklarung vieler sütras, und Sankaramisra weicht von der alten. nicht erhaltenen Vrtti in manchen Punkten ab, wie er in seinem Kommentar an den betreffenden Stellen angibt In schwierigen Fallen, die leider nur allzu häufig im V.D. sind, verlegen sich also die Erklarer aufs Raten und folgen ihr Eingebung, offenbar weil kein autoritativer Kommentar nach Art von Vātsvāvana's Bhāsva zum Nyāva Darśana bestand. Und ebenso scheint es auch schon zu Uddyotakara's Zeit gewesen zu sein Denn wenn ihm ein (fingierter) Gegner vorwirft, er setze sich in Widerspruch zu einem bestimmten sütra des VD, so ist seine stereotype Antwort: 1 "nem, weil Du den Sinn des sütra nicht verstehst" (na, sūtrārthāparījnānāt) Uddyotakara wurde wohl nicht eine falsche Erklarung dem Gegner in den Mund gelegt haben, wenn ein bhäsya oder sonstwie betitelter Kommentar vorhanden gewesen ware, woraus die richtige zu entnehmen war. Dagegen war jenes wohl moglich, wenn nur der Text der sütras ohne Kommentar vorlag Für dieselbe Annahme spricht die Tatsache, dass Prasastapada sein Werk Bhāsva nannte, obschon es kein Bhāsva zum VD ist, sondern eine selbstandige systematische Darstellung des Vaisesika Das wurde er wohl nicht haben tun konnen, wenn bereits ein Bhasya oder eine Vrtti zum V.D bestanden hatte Wir werden daher zu dem Schlusse gedrangt, dass die Erklarung des V D. mundlich in der Schule der Vaiśesikas uberliefert wurde, ohne in einem Kommentar schriftlich niedergelegt zu werden Dazu scheint es überhaupt nicht gekommen zu sein, vermutlich weil das Auftreten der Naiyāvikas das Interesse der Naturphilosophen in neue Bahnen lenkte Bei der Mimāmsā scheint die Entwicklung anfangs ähnlich wie beim Vaisesika gewesen Der alteste Erklarer des MS, der namhaft gemacht wird, ist Upavarsa, dass derselbe überhaupt der erste gewesen sei, lasst sich ebnsowenig beweisen wie das Gegenteil Aber 1ch bin durchaus geneigt zu der Annahme, dass die Erklarung des Sütra sehr lange mundlich in der Schule der Mimämsakas überliefert wurde, ehe ein schriftlicher Kommentar entstand. Denn der Wortlaut der sütras, namentlich im ersten Adhvāva, ist zuweilen unklar oder gar unverstandlich, und wird dann auch selten von Sabarasvämin, dem altesten uns erhaltenen Kommentar, erklart, wohingegen er immer mit voller Bestimmtheit den Gedanken angibt, der in dem betreffenden sütra angedeutet sein soll. Dieser stand ihm offenbar fest und war ihm oder schon seinem ältesten Vorgänger, dessen Werk er benutzte, durch die Tradition der

¹ Nyāya Vārttıka (Bibl Ind), p 103, 16 222, 18. 320, 11. 346, 15.

Schule gegeben, weshalb der Kommentator es nicht für notig hielt, den Gedanken aus dem sütra selbst, als seiner autentischen Festsetzung, dadurch zu entwickeln, dass er die Worte des Sūtrakāra in dem fraglichen Sinne erklarte. Bei anderen alteren Sütrawerken, solchen über Ritual, Dharma u. s. w., bei welchen der Stoff unverändert derselbe blieb, wie er vom Sütrakāra dargestellt wurde, machte es nichts aus. wenn die Erklarung der mundlichen Ueberlieferung überlassen wurde, und sind zu ihnen sicher erst lange nach ihrer Abfassung Kommentare geschrieben worden. Aber philosophische Lehren tragen den Keim der Entwicklung in sich, und wenn sie nicht rechtzeitig schriftlich fixiert werden, dann ergeben sich die Schwierigkeiten, die wir beim Studium des V D und, in geringerem Masse, bei dem des M.S empfinden. Jedoch ist es begreiflich, dass man auch bei diesen beiden altesten philosophischen Sutras nicht von der Schulpraxis, namlich der ausschliesslich mundlichen Ueberlieferung, abwich, die bei jenen anderen alteren Sütrawerken im Schwange war, bis die Periode der Kommentatoren-Literatur eingetreten war

Doch kehren wir zu unserem Thema nach dieser Abschweifung zurück, die eben begründen sollte, weshalb ich bei der Deutung der sütras im V D unbedenklich von den Kommentatoren abweiche, wenn der Zusammenhang der sütras unter einander oder die Behandlung des Gegenstandes in anderen Quellen dies empfiehlt

Die Frage nach der Ewigkeit des Wortes wird im Vaisesika behandelt. Der Gang der Untersuchung ist folgender V D 11 2, 23-25 wird festgestellt, dass der Ton weder eine Substanz (dravua), noch eine Kraft (karman), sondern eine Eigenschaft (quna) sei Dann werden als Grunde dafur, dass er nicht ewig sei, angeführt sato lingåbhāvāt (26) "weil kein Anzeichen dafur vorhanden ist, dass er besteht (auch wenn er nicht wahrgenommen wird)" (vgl MS i 1,7 asthänät) - nityavaidharmyāt (27) "wegen seiner Verschiedenheit von Ewigem (insofern er entsteht und vergeht)." anityaś câ 'yam kāranatah (28) "der Ton ist vielmehr nicht ewig, weil er auf Ursachen beruht" — na câ 'sıddham vıkārāt (29) Und dass der Ton nicht-ewig, d h veränderlich sei, ist eine Tatsache, weil er sich wandelt, d. h er kann bald lauter bald leiser sein — abhrvaktau dosāt (30). Nimmt man an, dass der Ton nicht hervorgebracht, sondern als etwas immer Daseiendes nur zur Erscheinung gebracht werde, so lassen sich die vorher angefuhrten Tatsachen nicht erklären - Nachdem so die Nichtewigkeit des Tones erwiesen ist, wird der Satz ausgesprochen: samyogād vibhāgac ca śabdac ca śabdanispattih (31). "Der Ton entsteht durch Verbindung (z. B. von Trommel und Schlagel), durch Trennung (z. B. beim Spleissenvon Bambus), und aus einem Tone (bei der Fortpflanzung des Schalles) "

Hiermit ist die physikalische Seite des Problems erledigt, es folgt die Anwendung des Ergebnisses auf das Wort lingāc câ 'nityah śabdah (32). "Das Wort ist nicht ewig, wegen seines charakteristischen Merkmals (namlich, dass es aus Lauten, d. h. Tonen, besteht) "Es folgen nun durch tu in 33 als solche angedeutet die Einwande des Gegners. dvayos tu pravṛttyor abhāvāt (33) "Es ist aber ewig, weil sonst Uebergabe und Annahme (des Veda) seitens des Lehrers bezw Schulers nicht statthaben konnte," d. h. man kann nur etwas wirklich Vorhandenes einem anderen übergeben oder von ihm annehmen — prathamāśabdāt (34) "Wegen der Benennung, "die erste," d. h. dreimal spricht er die erste samidhenī-Formel, woraus sieh ergibt, dass, was er dreimal spricht, ein und dasselbe, nicht imnier wieder Neues ist (Vgl. M.S. 1, 1, 20 samkhyābhāvāt) — sampratīpattībhāvāc ca (35) "Und weil man es (Wort, Spruch, etc.) als dasselbe wiedererkennt, (wenn dasselbe spater oder von einem anderen wiederholt wird)"

Nun erfolgt die Ablehnung und Widerlegung des eben Gesagten samdigdhäh sati bahutre (36) "Diese Grunde sind nicht eindeutig (vgl. in, 1, 17), (weil dieselben Erscheinungen auch da eintreten), wo es sich um mehrere, wirklich verselnedene Handlungen oder Vorgange handelt" Z.B. bei Tanzen man lehrt, lernt und wiederholt einen Tanz, niemand halt aber darum den betreffenden Tanz für ein ewiges, transzendentes Seiendes, das durch die Aufführung nur zur Erseheinung gebracht (manifestiert) werde! (vgl. N.D. ii, 2, 29 na, anyatye 'py abhyāsasyô 'pacārāt') — samkhyābhāvah sāmānyatah (37) ("In solchen Fallen erklart sich) die Angabe einer Zahl aus dem Gemeinsamen"; d.li. das allen Aufführungen eines Tanzes etc. Gemeinsame, das einheitliche Schema, gilt als die Einheit bei der Zahl der einzelnen Aufführungen, d.li. bei ihrer Zahlung, und ebenso gilt der identische Gedanke eines Sprüches für die Einheit der Zahl der Wiederholungen desselben Sprüches, und so weiter

Es kann kaum bezweifelt werden, dass die Polemik in den angefuhrten sütras des Vaisesika sieh gegen die Mīmāmsā richtet, und dass Kanāda die Darstellung desselben Gegenstandes in MS i 1, 6–23 gekannt hat Aber eine direkte Beziehung derselben auf das M.S. lasst sieh hochstens in seinem 37 sütra erkennen, dessen Wortlaut samkhyābhāvah sāmānyatah deutlich auf MS i 1, 20 samkhyābhāvāt hinweist Wenn Kanāda nicht alle im MS aufgefuhrten Grunde einzeln widerlegt, so hat das wohl darin seine Ursache, dass das Problem zu seiner Zeit oft verhandelt worden war und er deshalb den pūr-

vapakṣa nach dem damaligen Stand der Diskussion einrichten konnte. Ausdrücklich verdient aber hervorgehoben zu werden, dass die dem Vaiśeṣika eigene Argumentation, die physikalische Behandlung der Frage, dem M.S. und den Grammatikern vollig fremd ist. Dieselbe ist offenbar die Errungenschaft einer spateren Periode, die durch Kaṇāda eingeleitet wird.

Das hier Gesagte gilt auch für die Behandlung des Problems von der Verbindung des Wortes mit dem, was es bedeutet, die sich V. D. vii 2, 14-20 findet. Die Mīmāmsā lehrt, dass zwischen dem Wort und dem, was es bedeutet, eine naturliche, ewige Verbindung besteht (vgl. oben p. 146 autvattıkah şabdasyâ 'rthena sambandhah M.S. i. 1. 5) Die Widerlegung im Vaisesika ergibt sich aus physikalischen Betrachtungen; denn das Wort ist, wie wir eben sahen, physikalisch ein Komplex von Tonen Der Ton (śabda) ist aber eine Eigenschaft, die der Luft (ākāśa) inhariert, er kann also ausserdem nicht noch eine zweite Inharenz (samavāya), namhch in der Bedeutung des Wortes haben. Aber auch samyoga, der andere physische sambandha, ist ausgeschlossen; denn da samyoga ein guna ist, und guna keinen guna haben kann (agunavān 1 1, 16), so kann śabda (als guna) nicht samyoga (einen quna) haben Das ist der Sinn von V. D. vii 2, 14: qunatvāt. Zwei guna konnen nicht in Verbindung (samyoga) stehen, das müsste aber der Fall sein bei solchen Wortern, deren Bedeutung ein guna (z B. Farbe) ist (quno 'pr vibhāvyate 15) Da ein samyoga durch Bewegung (karma) entsteht und das Wort als guna ohne karma (niskriya) ist, so musste die Bewegung ausgehen von der Sache, die seine Bedeutung bildet, dann konnte es keine Worter geben, deren Bedeutung Dinge sınd, die nicht Sitz einer Bewegung sind wie z B ākāśa (miskriyatvāt 16). Und ebenso konnte es keine Worter geben, die etwas Nichtseiendes bedeuten, weil eine Verbindung mit etwas Nichtseiendem undenkbar ist. (asati nástíti ca prayogát 17) Aus diesen Grunden ergibt sich, dass Wort und Bedeutung nicht in (physischer) Verbindung stehen: śabdârthāv asambandhau 18, sondern es beruht auf Konvention, dass man ein Wort in bestimmter Bedeutung versteht sämayikah śabdad arthapratyayah 20 Die Kommentare fassen die sütras 14-18 als pürvapaksa, der jeden śabdarthasambandha leugne, und sutra 20 als siddhānta, der als den betreffenden sambandha die Konvention (samaya) lehre. Die Sache scheint sich auf folgende Weise zu erklaren sambandha scheint man ursprünglich das Verhaltnis zweier tatsächlich zusammengehoriger Dinge (svābhāvika oder prāptilaksana) bezeichnet zu haben, also Verbindung (samyoga) und Inharenz (samavāya) und das dadurch Bewirkte Darüber geht der Gebrauch von sambandha

im V. D. nicht heraus. Im N. D. iii 2, 43 wird noch der āśrayáśritasambandha erwähnt. Dann aber wurde sambandha auch Bezeichnung von begrifflichen Verhältnissen überhaupt und die spätere Philosophie, namentlich die Scholastik, operiert mit zahllosen sambandhas, wovon man sich leicht durch den Artikel sambandha im Nyāyakośa überzeugen kann. Bei śabda und artha nimmt man so einen vācyavācakasambandha oder pratyāyyapratyāyakasambandha an. Die wirkliche Entwicklung wird durch Heranziehung einer parallelen Erorterung im N. D. ii 2, 53-54 klar, worauf ich daher hier eingehe.

In N. D 11 2, 53 pūra napradāhapāţanânu palabdheś ca sambandhâbhāvah wird gelehrt, dass kein sambandha zwischen śabda und artha bestehe, weil sonst beim Aussprechen der Worter "Speise," "Feuer" oder "Schwert" der Mund gefullt, verbrannt oder gespalten werden musse. Hier bedeutet zweifellos sambandha die materielle Verbindung des Wortes mit dem Gegenstand, den es bedeutet. Darauf sagt der Gegner: śabdârthavyavasthānād apratisedhah. 54. "Dies ist kein Beweis gegen (das Bestehen eines sambandha), weil zu jedem Wort eine bestimmte Bedeutung gehort." Statt sambandha gebraucht der Gegner vyavasthāna, offenbar weil sambandha eine Bedeutung bekommen hatte, die hier unzulassig ist. Die Widerlegung des Einwurfs erfolgt im folgenden sütra. na, sāmayıkatvāc chabdârthasampratyayasya 55 "Nein, weil das Verstandnis der Bedeutung des Wortes sich aus der Konventionalitat ergibt " Der Wortlaut dieses sütra stellt die Bezugnahme auf V. D. v11 2, 20: sāmayıkah śabdādarthapratyayah ausser Zweifel (die Ersetzung von pratyaya des V. D. durch sampratyaya ist durch N. D. ii, 1, 52 veranlasst). Vatsyayana sagt ım bhasya zu diesem sütra: na sambandhakārītam sabdadrthavyavasthānam kim tarhī samayakārītam. "Die feststehende Zugehorigkeit des Wortes zu seiner Bedeutung wird nicht durch sambandha bewirkt, sondern durch Konvention (samaya)." Hieraus erkennt man, wie das entsprechende Vaisesika sütra (20) gemeint ist, und dass die Kommentatoren mit ihrer Deutung desselben als pūrvapaksa auf den Irrwege sind Vātsyāyana fahrt nach der angeführten Stelle fort. yat, tad avocāma asyêdam iti sasthīvisistasya vākyasya 'rthaviseso 'numātah sabdarthavoh sambandha iti samayam tad avocāmê 'ti. "Wenn wir sagten (ım bhāsya zu ii 1, 52): Die bestimmte Bedeutung des durch den Genitiv charakterisierten Ausdruckes asya idam (d h. der Gebrauch des Genitivs in diesem Ausdruck) gibt einen Zusammenhang (sambandha) zwischen dem Wort und seiner

¹ Der Genitiv drückt allgemein irgendeinen Zusammenhang (sambandha) zwischen zwei Begriffen aus. In vielen Fallen wird er dadurch erklärt, dass zwischen ihn und das regierende Wort sambandhin gesetzt wird.

Bedeutung zu, so meinten wir damit die Konvention (samaya)." Diese Argumentation ist nicht ohne Eindruck auf die Mīmāṃsakas geblieben, wenn sie auch naturlich an dem von Bādarāyaṇa gelehrten autpattika śabdasyâ 'rthena sambandha festhalten. Der Vrttikāra zu M.S 11, 5, p. 12 antwortet auf den Einwand, dass der śabdasyâ 'rthena sambandha (siehe l 12 mit deutlicher Beziehung auf N D ii, 1, 53), nicht ein (physischer) Zuzammenhang sein konne, wie kāryakāranabhāva, nimittanaimittikabhāva, āśrayâśrayibhāva, samyoga u s. w., folgendes yo hy atra vyapadeśyah sambandhas, tam ekam na vyapadiśati bhavān: pratyāyyasya pratyāyakasya ca yah samjnāsamjnīlaksana iti "Nur denjenigen Zusammenhang, der hier anzugeben ware, gibst Du nicht an denjenigen zwischen dem, was zur Erkenntnis gebracht werden soll und dem, was sie bewirkt, welcher besteht in dem Namen und dem Benannten" Das ist aber des Vṛttikāra Weiterbildung der ursprunglichen Lehre, in dem Sūtra steht davon nichts

Hier moge mir eine Bemerkung daruber gestattet sein, wie ich mir die Entstehung der paradoxen Lehre bei den Grammatikern und Mīmāmsakas denke Zu keiner Zeit konnte es zweifelhaft sein, dass das Wort mit seiner Bedeutung verbunden ist. Da man sich aber nur physische Verbindung vorstellen konnte, so nahm man eine solche auch zwischen dem Wort und dem, was es bedeutet, an In unklarer Form, darum aber nicht nunder wirksam, zeigt sich diese Vortsellungsart im primitiven Glauben bezuglich Zauberformeln us w Die altesten Sprachphilosophen gaben dieser noch unklaren Vorstellung einen klaren, bestiminten Ausdruck und erklarten, dass das Wort und die dadurch benannte Sache, fur die dann erst spater die Species gesetzt wurde, in wirklicher Verbindung stehe, dass dieselbe übersinnlich sei, erregte keinen Anstoss, schien vielmehr selbstverstandlich bei dem geheimnisvollen Wesen des Wortes und der Sprache überhaupt Diese Denkart, die noch den Erorterungen bei Kätyävana und im MS zugrunde liegt, wurde tatsachlich überwunden durch die erstarkende Naturphilosophie, die wir zuerst im V D und spater nur in Einzelheiten weitergebildet im N D kennen lernen Die spateren Anhanger der Lehre von der Ewigkeit des Wortes und dessen Verbindung mit seiner Bedeutung fanden sich mit den Feststellungen der Naturphilosophie durch einen Kompromiss ab, insofern dem ewigen Worte eine gleich ewige Fahigkeit (śakti), seine Bedeutung auszusagen, innewohnt; damit war der vācyavācakasambandha des Nyāya, von dem das MS noch nichts weiss, tatsachlich anerkannt

Unsere bisherigen Erorterungen gingen von der so gut wie sicheren Annahme aus, dass Kanāda die Mīmāṃsā gekannt habe Zur Stütze dieser Annahme moge der Hinweis darauf dienen, dass er ihr seine Vorstellung über das karma, das in der Mīmāmsā apūrva heisst, verdankt. Hieruber durfte eine kurze Ausführung am Platze sein. Die Lehre vom karma ist als religiose Theorie sehr alt und lasst sich bis in das Brhadaranyaka zurückverfolgen, aber erst durch die Mimämsä ist sie zu einer "wissenschaftlich" erwiesenen Tatsache erhoben. Das anūrva wird durch die Opferhandlung hervorgebracht und besteht als das notwendig vorauszusetzende Bindeglied zwischen dieser und ihrem spater, eventuell erst im Jenseits, eintretenden Lohne. Diese Theorie ist in der Mimämsä ins einzelne ausgebildet, woruber Ganganath Jhā in der Einleitung zu seiner Uebersetzung des Slokavārttika Alles ist logisch deduziert, naturlich unter der Voraussetzung, dass der Veda absolute Autoritat besitzt. An dieser zweifelt auch das Vaisesika nicht So konnte Kanāda das adrsta (= karma) als etwas Reales, uber jeden Zweifel Erhabenes, betrachten und zur Erklarung selbst physikalischer Vorgange verwenden, wo die rein physikalische Erklarung nicht ausreichte, wie Dasgupta 1 ausgeführt hat Wenn dieser Gelehrte aber glaubt, dass das Vaisesika eine alte Mīmāmsā-Schule sei, so wird das folgende die Unhaltbarkeit dieser paradoxen Ansicht dartun Auf seinen Versuch,2 in V. D 11, 2, 36-37 die Annahme der Ewigkeit des Tones hinein zu interpretieren, brauche ich nicht weiter einzugehen und darf meine oben gegebene Erklarung dieser beiden sütras für sich selber sprechen lassen

Die Ablehnung der Lehre von der Ewigkeit des Wortes hatte für Kanāda's Philosophie weittragende Folgen. Denn damit fiel auch der Satz von der Ewigkeit des Veda, auf den die Mīmāmsakas die absolute Autorität des Veda begrundeten,³ und statt dessen musste angenominen werden, dass er von einem Urheber stamme (pauruseyatva des Veda). Der Nachweis findet sich V. D. vi I, I. buddhi pūrvā vākyakrtir rede "Die Abfassung von Satzen im Veda setzt einen vernunftigen Urheber voraus". Man beachte, dass vākya nicht bloss Satz in grammatischem Sinne (khandavākya) ist, sondern auch ein Komplex von Satzen, die einen Gedanken zum Ausdruck bringen (māhavākya), daher die Mīmāmsakas definieren apauruseyavākyam vedah 4

Ein vākya setzt einen Verstand (buddhi) voraus, der den im vākya ausgedruckten Gedanken gedacht hat, buddhi ist aber ein guna des ātman, folglich stammt der Veda von einem hoheren Wesen, und zwar einem allwissenden, weil sonst der von ihm geoffenbarte Veda keine

¹ A History of Indian Philosophy, Vol. 1, p. 283

 $^{^2}$ L c , p 284, n 1 3 M S 11, 27–32 4 Nyāyakośa, p 735

absolute Autorität haben könnte. — Die Annahme von höheren Wesen wird folgendermassen begründet. In V. D. ii 1 wird gezeigt, dass der Wind (vāyu) kein sichtbares Indicium (linga) habe, sondern nur aus einem begrifflichen (sāmānyato drstāt) erschlossen sei, weshalb wir nichts Individuelles von ihm wissen (avisesa, 16.), also auch keinen Namen für ihn hätten, wenn wir ihn nicht aus dem Veda erführen (tasmād āgamīkam. 17). Dann fahrt das Sūtra fort: samjnākarma tv asmadvišistānām lingam 18, pratyaksapravrttatvāt samjūākarmanah 19. "Namengebung ist aber ein Beweis fur hohere Wesen als wir, weil sie stattfindet auf Grund der Wahrnehmung (des zu benennenden Dinges)." Derselbe Gedanke kehrt V. D. vi 2, 2 wieder: brāhmane samjñākarma siddhilingam. "Namengebung im Brāhmana ist ein Beweis für die Vollkommenheit (des Benenners)." Der Sinn scheint mir folgender zu sein Der Urheber des Veda muss Verstand haben, weil er in Satzen redet. In den Brahmanas finden wir Satze wie yvotistomena svargakāmo yazeta; wer sie ausspricht, muss nicht bloss Verstand, sondern einen vollkommenen Verstand haben, weil er die uber den Verstand der Sterblichen hinausgehenden Opferhandlungen er kannt und benannthat.

Das ist alles, was in dem V D. über den Urheber des Veda direkt gesagt wird. Kaṇāda aussert sich nicht daruber, ob es eine absolute Gottheit, Iśvara, gibt, dem die Offenbarung des Veda zuzuschreiben ware (Lehre des Yoga), oder ob der Veda in jeder Weltperiode aufs neue von einer zur Allwissenheit gelangten Seele verkundet wird (Lehre des Sānkhya). Ich glaube aber, dass Kaṇāda letzterer Ansicht zugetan war. Die Entscheidung dieser Frage hangt ab, wie mir scheint, von der richtigen Erklarung der sūtra V. D. iii 2, 19–21, die über die Vielheit der Seelen handeln. Dieselben lauten.

sukhaduhkhajñānanispattyaviśesād aikātmyam 19. vyavasthāto nānā. 20. śāstrasāmarthyāc ca 21. Nach dem altesten Kommentar Sankaramiśra ist der Sinn des ersten sūtra folgender es gibt nur einen einzigen Ātman, denn das linga des ātman sind sukha, duhkha und jñāna, und diese entstehen gleichmassig in allen Seelen, für deren Verschiedenheit kein linga da ist. Wie also der ākāśa, dessen linga der Schall in verschiedenen Teilen desselben entsteht, doch nur einer ist, so sind auch die einzelnen Seelen nur Teile des einen ātman Aehnlich Candrakānta, mit anderer Begrundung, aber gleichem Resultat Jayanārāyaṇa Nach Sankaramiśra und Jayanārāyaṇa ist dies der pūrvapaksa, und das folgende sūtra enthalt den siddhānta, während nach Candrakānta sūtra 19. lehrt, was der ātman (brahma) an sich ist, wogegen 20 die Vielheit der empirischen Seelen im vyavahāra-Zustand

erklären soll. Sütra 19 ist klar: "Die ätmans sind von einander verschieden, weil jeder seine Besonderheit hat." Wenn das vorhergehende sütra den von den Kommentatoren hineingelegten Sinn haben sollte, so müsste dem nānā in 20 entsprechend in 19 statt aikātmyam stehen eka eva: oder wenn aikātmuam = ātmaikuam sein soll, dann müsste es in 20 nānātvam statt nānā heissen. Aber arkātmya bedeutet hier auch nicht, dass es nur einen einzigen atman gebe; denn das beweist doch nicht der für das aikātmya angefürhrte Grund, namlich dass hinsichtlich der Entstehung von Lust, Leid und Wissen kein Unterschied obwalte (zwischen den einzelnen Seelen). Sondern es bedeutet hier wie auch sonst "Wesenseinheit," womit ausgedrückt werden soll, dass es zwar viele Seelen gibt, aber nicht verschiedene Arten von Seelen. Sütra 19 übersetze ich daher: "alle Seelen sind gleichartig, weil ununterschiedlich in allen Lust. Leid und Wissen entstehen können." Es gibt aber viele Seelen. Dafur wird in 20 die vyavasthā, und in 21 śāstrasāmarthya als Grund angefuhrt, Letzteres legen die Kommentatoren als eine Berufung auf die heiligen Schrift aus, als wenn das sütra lautete: śrutes ca. Aber das kann śāstrasāmarthyāt nicht bedeuten; es ist dasselbe wie śāstrārthavatvāt B. S. 11 3, 33 und bedeutet: weil sonst das *śāstra* (vedische Vorschriften zu opfern, u s w.) zwecklos (anarthaka) waren, (śāstram cawam anarthakam syāt. M.S. vii, 2, 6) d. h. in unserem Falle. wenn nicht iede Seele ihre besondere Existenz hatte, so wurde der Lohn ihrer Opferdhanlungen nicht ihr zugute kommen, und dann wurde eine vedische Vorschrift wie agnistomena svargakāmo yajeta keinen Zweck haben. In ahnlichem Sinne wird B. S 1v, 2, 17 vidyāsāmarthyāt gebraucht weil andernfalls "anarthikawa vidyā syāt." — Wenn noch ein Zweifel ubrig bliebe, ob nach Kanāda's Ansicht jedem ātman individuelles, ewiges Dasein zukomme, so wird er durch das weiter unten anzufuhrende sutra V 2, 18 gehoben; aus demselben ergibt sich, dass die Einzelseele in der Befreiung (moksa) fortfahrt zu bestehen.

Kanāda lehrt also ausdrucklich, dass alle ātmans in ihrem Wesen (quâ ātman) vollstandig einander gleich sind. Wenn er auch hohere Wesen als wir sind anerkennt (V. D. 11, 1, 18 siehe p. 160), so handelt es sich dabei nur um verkorperte Seelen, wie aus der Diskussion über die verschiedenen Korper iv, 2, 5-10 hervorgeht: tatra śarīram dvividham yonijam ayonijam ca 5, worauf er dann mit funf Grunden beweist, dass es Wesen gibt, die keinem Mutterleibe entsprossen sind santy ayonijāh. Die hoheren Wesen haben aber (siehe oben, ii 1, 18-19) vollkonmmene Erkenntnis, da ihnen alles direkt wahrnehmbar (pratyaksa) ist. Unter ihnen konnte also auch der

Offenbarer des Veda sein, wenn nicht gar mit dem vieldeutigen sütra iv 2, 11, vedalingāc ca dies ausdrücklich gemeint ist. Jedenfalls kam Kanāda mit der Annahme der Gleichheit aller ātmans zur Erklärung der von ihm anerkannten Tatsachen aus und steht soweit auf demselben Boden wie die Sānkhyas, welche ja auch die Gleichheit aller purusas lehrten Aehnlich scheint die Sache auch noch im ursprünglichen Nyāya gelegen zu haben Wie sich dann in ihm die Lehre vom Isvara entwickelt hat und dieser erst spat als Urheber des Veda anerkannt wurde, habe ich an anderem Orte i dargelegt. Hier erwähne ich den Nyāya nur, weil er zeigt, dass ahnliche Vorstellungen über den oder die Verfasser des Veda wie im Vaisesika auch noch lange nach der Abfassung des V D in Geltung standen

Am bedeutsamsten aber ist der prinzipielle Gegensatz, in den sich das Vaisesika hinsichtlich des dharma- Begriffes zur Mīmāmsā gesetzt hat Die Mīmāmsā erklart das, was der Veda vorschreibt, als dharma: codanālaksano dharmah 1, 1, 2, was sich nach dem Bhāsva etwa so paraphrasieren lasst dharma ist ein Gut, dessen charakteristisches Merkmal der in vedischen Vorsehriften liegende Antrieb zu Opfern etc ist Diese Definition, die über das Wesen des dharma nichts aussagt, mochte den Theologen genugen, nicht so den Philosophen Ihr setzt Kanada eine andere entgegen yato 'bhyudayanıh śrcyasasıddhıh, sa dharmah (1, 1, 2) "dharma ist das, wodurch unser zeitliches Wohl und ewiges Heil zustande kommt", und er fahrt fort tadvacanād āmnayasya prāmānyam (1, 1, 3) "Weil er ihn lehrt, hat der Veda Autoritat." Das ist eine Umkehrung des Satzes der Mīmāmsā nicht weil der Veda absolute Autoritat hat, sind seine Gebote dharma, sondern weil der Veda dharma lehrt, hat er Autoritat! Nach Kanāda's Definition ist dharma die Ursaehe von abhyudaya und nihŝreyasa, der dharma im Sinne der Mīmāmsā hat es nur mit abhyudaya zu tun, insofern alle Opfer nur zur Erlangung zeitlicher Guter, sei es in diesem oder einem spateren Dasein, verrichtet werden Von dem ewigen Heile, nih śreyasa, ist in der Mīmāmsā uberhaupt nicht die Rede, aber im Vaisesika ist es gerade die Hauptsache, der Zweck seiner Lehre Das sütra 3 lautet. dharmarı se saprasūtād dravyagunakarmasāmānyarı se sasamarāyānām padārthānām sādharmyavaidharmyābhyām tattrajnānān nihśreyasam

"Durch eine besondere Art von dharma wird die richtige Erkenntnis der sechs Kategorien nach ihrer Aehnlichkeit und Verschiedenheit erlangt, und aus ihr geht das nihéreyasa (die Erlosung) hervor "Insofern also, als die Vaisesika-Philosophie zum nihéreyasa führt, fallt sie unter den Begriff des dharma Dass es Kanāda mit dieser Charak-

¹ Jacobi, die Entwicklung der Gottesidee bei den Indern, Bonn, 1923, pp 47 ff.

teristik ernst gemeint ist, ersieht man daraus, dass er im Adhvāva 6 einige dharmas, die zum abhyudaya führen, eingehend erörtert, ein Gegenstand, dessen Behandlung sonst in einem philosophischen System gar nicht am Platze ware. Kanāda steht durchaus auf dem Boden der offenbarten Religion und kann den Anspruch auf vollständige Rechtglaubigkeit erheben; nur so konnte er die Berechtigung des jñānamārga gegen die Mīmāmsā als Vertreterin des karmamārga zur Geltung bringen, weil auch sein Heilsweg sich unter den Begriff des dharma bringen lasst Aber er verstand den jñānamārga doch nicht so, dass die Erkenntnis dessen, was er in seinem System als Wahrheit erwiesen zu haben glaubte, unmittelbar zum Ziele fuhre, vielmehr bedarf es dazu noch des yoga Daruber handeln v 2, 16-18 tadanārambha ātmasthe manası duhkhâbhāvah, sa yogah (16) "Wenn dies (namlich der Kontakt, samnikarsa, von ātman, indriya, artha und manas) nicht stattfindet und das manas nur mit dem ātman verbunden ist, dann ist der Leib leidlos das ist yoga." Das folgende sütra lehrt, dass der Auszug der Seele aus dem Leibe, ihre Einkehr in einen neuen Leib, die Verbindungen (d. h. Assimilation) von Speise und Trank und die von anderen Produkten (die prānas) durch das adrsta bewirkt werden — tadabhāve samyogâbhāvo 'prādurbhāvaś ca moksah (18). Wenn das adrsta aufgehort hat, dann tritt die Erlosung ein, welche in der vollstandigen Abwesenheit jener Verbindungen und deren Nichtwiederhervortreten besteht" - Ueber die Bedeutung des Yoga fur die Erlangung der Erlosung (apavarga) handelt ausfurhlicher N D iv 2, 38-47, worauf hier zur Erlauterung der Andeutung Kanāda's hingewiesen sein moge Dass dabei wirklich an Yoga-ubungen nach Art der im Yogasütra gelehrten gedacht ist, beweisen deutlich N. D. 1v 2, 42, aranyaguhāpulmâdisu yogâbhyāsôpadeśah, und 46: tadartham yamanıyamābhyām, yogāc câ 'dhyātmavidhyupāyaih "Zum Zwecke der Erlosung soll die Seele gereinigt werden durch yama und niyama (cf Y S 11 30, 31), und Ausfuhrung der Vorschriften des Yoga, die auf das Selbst Bezug haben" (Nach dem Bhāsya sind mit letzterem einige Uebungen gemeint, die nur zum Teil mit den Y S. ii 29 aufgefuhrten yoqangas identisch sind)

Ich fasse das Ergebnis der vorstehenden Untersuchungen kurz zusammen. Das System der Mīmāmsā, wie es im MS. vorliegt, entstand in derselben Periode, in welcher Spekulationen über das Wesen des Wortes die Grammatiker unter den Vorgangern Kātyā-yana's aufs lebhafteste beschaftigten Denn dieselben Probleme finden sich auch im ersten Adhyāya des M.S. Doch auch in formaler Beziehung hat die Mīmāmsā ein naheres Verhaltnis zur Grammatik als

irgend ein Zweig der älteren Literatur, insofern nur in ienen beiden Disziplinen die strenge Beweisführung mit Gründen pro und contra zur Festsetzung der Lehrsatze als Methode der Darstellung zur Ausbildung und steten Anwendung gelangt ist. Auch die Vorstellungswelt ist im allgemeinen noch die der vorausgehenden vedischen Periode. Eine neue Weltanschauung, die vom Lokavata ausgegangen war, tritt uns im Vaisesika entgegen, sie besteht in der naturlichen und realistischen Erklarung der physischen Erscheinungen und der abstrakten Begriffe, die in der Sprache zum Ausdruck gelangen. Dadurch tritt das Vaisesika in einen Gegensatz zu dem altertumlicheren Mīmāmsā-System, dessen Lehren von der Ewigkeit des Wortes und des Veda vom Standpunkt der Naturphilosophie aus betrachtet und abgetan werden. Aber in religioser Beziehung sind beide Systeme einig, insofern auch das Vaisesika auf dem Boden der offenbarten Religion steht. Jedoch macht sich seine freiere Richtung, naturlich innerhalb der Grenzen der Rechtglaubigkeit, durch eine veranderte Fassung des dharma-Begriffes geltend, wodurch auch seine Erlosungslehre (jñānamārga) Anspruch auf Orthodoxie gewinnt

Es ist klar, dass zwischen der Abfassung des M.S und der des V.D. ein langerer Zeitraum liegen muss, in dem sich die angedeutete Entwicklung vollziehen konnte. Wenn meine oben vorgetragene Ansicht, dass das M.S zwischen 300 und 200 v Chr. entstanden sei, richtig ist, dann dürfte das V.D. in das erste Jahrhundert vor oder nach Anfang unserer Zeitrechnung anzusetzen sein

Nachtrag. Seitdem vorstehende Abhandlung wiedergeschrieben wurde, hat unsere Kenntniss der altesten kommentaren-Literatur zur Mīmamsā eine bedeutende Bereicherung erfahren durch Professor Dr Krishnaswami Aıyangar (Madras) in seinem Aufsatz "A School of South Indian Buddhism in Kanchi," der der Fourth Oriental Conference (Allahabad, November, 1926) vorgelegen hat. Es wird namlich in dem anonymen Prapanchahrdaya (Trivandrum Sanskrit Series, No. 45, p 39) folgendes berichtet Ueber das ganze Gebiet der Mīmāmsā, umfassend den tantrakanda (M.S.), den devatakanda und den brahmakānda (BS.) verfasste Bodhāyana einen grossen Kommentar namens Krtakoti Aus diesem hat Upavarsa in dem seinigen einen Auszug gegeben. Upavarsa's Kommentar ist dann von Devasvāmin weiter gekurzt und auf die beiden ersten kandas beschrankt worden. Auch Bhavadāsa schrieb ein "Jaiminiya-bhāsya." Ihm folgte Sabarasvāmin, dessen Bhāsya nur den ersten kānda umfasst Hieraus ist nicht ersichtlich, ob der Vrttikara mit Devasvamin oder Bhavadasa identifiziert oder von ihnen unterschieden werden soll.

Mit den Angaben des Prapanchahrdaya stehen aber weitere von Professor K. Aiyangar beigebrachte Zeugnisse uber Krtakoți nicht in vollem Einklang. In dem alttamulischen Gedicht Manimekhalai ist Krtakoți Name eines Autors, ebenso im Trikāndaśeṣa, brahmavarga v. 19, 23., wahrend in der Vaijayantī (Oppert's edition, p. 95, l. 308) Upavarṣa als Krtakoțikavi bezeichnet wird.

DANDIN AND BHAMAHA

By ARTHUR BERRIEDALE KEITH

ALL dates given in Indian literary history," wrote W. D. Whitney in 1879, "are pins set up to be bowled down again," and it seems not unfitting, in honor of one who took upon himself as a labor of love the completion of Whitney's version of the *Atharvaveda*, to seek to demonstrate once more the truth of this aphorism

With his wonted acumen H. Jacobì i has lately sought to establish within narrow limits the dates of two interesting writers, Daṇdin and Bhāmaha. His results have been accepted by the learned historian of Sanskrit Literature, M. Winternitz, as well as by Dr. S. K. De, to whom we owe a valuable exposition of Sanskrit Poetics. The dates suggested, therefore, may now be regarded as well on the way to definite acceptance, and it becomes necessary, accordingly, to submit to a careful investigation the evidence adduced, in order to ascertain whether we have now reasonably assured results or merely plausible combinations.

We certainly owe it to Jacobi that we have some definite evidence for the date of Bhāmaha, beyond the admitted fact that a commentary on his treatise on poetics was written by Udbhata, who was a councillor of Jayāpīda of Kaçmīr (779–813 a d). In his fifth chapter Bhāmaha takes occasion to discuss the nature of inference, a subject eagerly investigated by the contemporary Buddhist logicians, and he mentions as a definition of inference a doctrine thus expressed:

trırūpāl lıñgato ıñānam anumānam ca kecana

In Dharmakīrti's Nyāyabındu we have the definition tatra trirūpāl lingād yad anumeye jñānam tad anumānam. Nor is this all, in verses 28 and 29 of the same chapter we find a reproduction in sense of three Sūtras (138–140) of Nyāyabındu, iii, and in them two verbal coincidences in definition. This is proof of a very strong kind that Bhāmaha knew Dharmakīrti's work, and Dharmakīrti certainly had not attained fame in the time of Hiuen Thsang, while I-tsing, whose stay in India dates from 673 to 695 a.d., notes him as one of recent fame Jacobi further suggests, very ingeniously, that in iv, 7 Bhāmaha's ironical

¹ SBA, 1922, pp 210 ff

² Gesch d ind Litt, 111, 641

³ Sanskrit Poetics, 1, 63 ff

words: gurubhih kim vivādena? are a reference to Prabhākara Guru, the famous Mīmānsaka, who was doubtless a predecessor of Kumārila.¹ In this case, however, the evidence is inadequate, and clearly must be disregarded in a serious consideration of the date.

On the other hand Jacobi dismisses, without adequate ground, the important observation of Pāthak 2 that Bhāmaha's reference in vi. 36 to a Nyāsakāra is an allusion to the commentary of Jinendrabuddhi on the Kāçikā Vrtti, which may be assigned to c. 700 A.D. In doing so he relies on the impression of Kielhorn 8 that the commentary in question used Haradatta's Padamañiari, while tradition ascribes Haradatta's death to 878 A.D. There seems no real doubt that the recollection of Kielhorn was at fault, and it may be noted that Winternitz does not follow him in refusing to see in the Crcupālavadha, ii, 112 a reference to the Nyāsa. Without claiming certainty in the case of Māgha's reference, it may fairly be said that the burden of disproving allusion to Jmendrabuddhi rests on Jacobi, and that his reference to Kielhorn is quite inadequate for the purpose Skepticism in this case seems the more unjustified seeing that the dates accord so well; the use of Jinendrabuddhi and that of Dharmakirti concur in suggesting 700 AD. as the earliest period for the author

When we come to the case of Dandin, we find ourselves deprived of any precise guidance. Jacobi readily accepts the suggestion of Pāthak 4 that the threefold division of karman into nirvartya, vikārya, and prāpya set out in the Kāvyādarça (iii, 240) is derived from the Vākyapadīya (iii, 45-51) of Bhartrhari. But here we have a very different state of affairs from that in the case of the relation of Bhāmaha and Dharmakirti, the probability that Dandin is simply adopting a current doctrine, not derived from Bhartrhari's work, is very great, and to render this impossible it would be essential to prove that the doctrine was originated by Bhartrhari. Neither Pāthak nor Jacobi establishes anything of the sort, and it is perfectly clear that, unless and until better reasons are adduced, this effort to fix an upper limit for Dandin must be pronounced without value Equally without importance, as Jacobi in these cases recognizes, are guesses at the identity of the king Rājavarman or Rātavarman of Kāvyādarça, ii, 279, and efforts to solve the riddle in iii, 314 on the theory that it alludes to the rule of the Pallavas in Kāñcī. More serious is the proposal of Maheçacandra Nyāvaratna b to find use of Bāna's Kādambarī in the Kāvvādarca. A com-

parison, however, of the two passages yields no such result; the Kādambarī (p. 102) has

kevalam ca nisargata evābhānubhedyam aratnālokocchedyam apradīpaprabhāpaneyam atigahanam tamo yauvanaprabhavam.

The Kāvyādarça (ii, 197) has

aratnālokasamhāryam avāryam sūryaraçmibhih dṛṣṭirodhakaram yūnām yauvanaprabhavam tamah.

The assumption that the $K\bar{a}dambar\bar{\imath}$ was the source of the verse in Daṇḍin seems without possible ground, and none of those who have approved it have suggested on what point their claim of borrowing is based. If there is the relation of borrowing, every consideration suggests that Bāṇa is the person indebted, and that he has endeavored to elaborate and improve on his model. But it is really going too far to stress such a resemblance—In the world of Kavis long before 600 A.D. we may assume that many tried their hands on so obvious and tempting a theme as that enshrined in the verse and in the $K\bar{a}dambar\bar{\imath}$. Even were the verse the model of the $K\bar{a}dambar\bar{\imath}$, it would not throw decisive light on the date of Daṇḍin, as it may not be more than a quoted verse, which Bāṇa used independently.

Still less attractive is the effort to show that Kāvyādarça, iii, 302:

ratnabhittisu samkrāntaih pratibimbaçatair vrtah jnāto Lankeçvarah krcchrnd nnjaneyena tattvatah,

is derived from Cicupālavadha, ii, 4.

ratnastambhesu samkrāntapratīmās te cakāçīre ekākīno 'pī parītah pauruseyavītā īva.

Jacobi himself candidly admits that a similar idea is found already in the $K\bar{a}dambar\bar{i}$ (p. 131), and nothing is more unwise than to trust as evidential these variations of well-worn themes

This completes Jacobi's proofs for an upper limit of date; he accepts the fact that Vāmana knew Dandin and used his work, and Vāmana he assigns to the reign of Jayāpīḍa. It follows, therefore, that for Jacobi the upper and lower limits of date for Dandin and Bhāmaha are much the same From the arguments, however, adduced above against Jacobi's views, it follows that, while Bhāmaha cannot well have written before 700 a D, the date of Daṇḍin is wholly undetermined, and that there are no external criteria which induce us to bring him into close relationship in time with Bhāmaha.

Jacobi, however, claims that comparison of the doctrines laid down in the two works extant shows that Dandin was a critic of Bhāmaha, not Bhāmaha of Dandin, and he has in his favor the view of commentators on the Kāvyādarça, such as Tarunavācaspati, who here and there asserts that Dandin is criticising Bhāmaha 1 It is, however, clear that, apart from the fact that the commentators are of late date, and are often clearly wrong in their explanations of Dandin, no stress can be laid on such assertions as evidence of date. What the commentators were interested in was not the chronological sequence of doctrines; when Dandin criticized something which occurred or appeared to occur in Bhāmaha, he was set down as criticizing that view without regard to the question whether Dandin had Bhāmaha before him or merely some forerunner who enunciated a view adopted by Bhāmaha. And, fortunately, we are not left in doubt as to the existence of a predecessor, whom Bhāmaha cites no less than twice, a fact significant of his importance This authority, Medhāvin, has left no work for us, as usual in India, the more complete treatise has superseded the older, and it is lucky that we even know of his existence. Methodologically it is obvious that in any places where Dandin seems to criticize Bhāmaha we are bound to ask whether it is not rather a case of dealing with the views of Medhāvin or perhaps rather some other predecessor of Bhāmaha.

To assume that it must be Bhāmaha, simply because Bhāmaha expresses similar views to those criticized, is logically quite inadmissible, and, if actual use of Bhāmaha is to be established, it must be on the strength of precise parallels of very special quality. Such an example, for instance, exists in the case of Bhāmaha and the author of the Bhatti-Kārya. Bhāmaha, writing of riddles, declares (11, 20).

kāvyāny apī yadīmānī vyākhyāgamyānī çāstravat utsavah sudhīyām eva hanta durmedhaso hatāh.

Bhattı (xxii, 34) says of hıs own poem

vyākhyāgamyam ıdam kāvyam utsavah sudhıyām alam hatā durmedhasaç cāsmın vidvatpriyatayā mayā

There can be no doubt as to borrowing here, and the borrower is shown decisively by the fact that the claim is as adequately motived by the character of Bhaṭṭi's work as it is artificial in the case of Bhāmaha's application of the idea to riddles. The instance is extremely informative; it proves absolutely that Bhāmaha was fond of using predecessors anonymously, and renders it as natural to expect to find imitation of

¹ Cf Harı Chand, Kālıdāsa et l'art poétique de l'Inde, p 76

Daṇḍin and criticisms of his doctrines as to trace allusions to Bhāmaha in Daṇḍin. Yet it may be noted, as indicating the complexity of arguments of this kind, that Sovani ¹ regards the passage in Bhatṭi as an allusion to Bhāmaha, and K P Trivedī ² interprets the passage in Bhāmaha not as a eulogy of riddles, but as a condemnation of lack of simplicity in poetry in general. It is clear, therefore, that no conclusions of value can be based on superficial investigation

The passage which seems decisive to Jacobi is that in which Dandin enumerates the ten *Dosas* of poetry The list agrees verbally with that given by Bhāmaha, but the latter follows it up with (iv, 3):

pratijnāhetudī stāntahīnam dustam ca nesyate

On the other hand Dandin continues (III, 126)

pratijñāhetudṛstāntahānir doso na vety asau vicārah karkaçah prāyas tenālīdhena kim phalam?

Dandin thus dismisses as unattractive and fruitless any discussion as to whether there should be recognized an eleventh Dosa in the shape of a logical defect. He does not precisely refuse to recognize it, he accepts ten as certain and leaves the eleventh problematical Jacobi it seems clear that it was Bhāmaha, who, being deeply interested in matters logical, invented the eleventh Dosa The priority of Bhāmaha would thus be secure, but there seems no reason to accept the assertion which is not supported by any evidence What is clear is that some authority proposed this new Dosa, and that it was the subject, as every innovation is, of considerable discussion. Dandin thought the matter not worth pursuing, while Bhāmaha was interested in it, priority on either side seems excluded as a legitimate deduction from the evidence Indeed, if we imitate Jacobi's own procedure 3 in the case of the lists of Alamkaras, we would ascribe to Medhāvin or some other predecessor of Bhāmaha this innovation, to which Dandin and Bhāmaha should be deemed to have reacted in different ways, as in the case of the Alamkara lists In that instance Jacobi holds that Bhāmaha followed generally his source, making chiefly an effort to simplify, while Dandin developed new sub-divisions in order to display his critical power

The second argument adduced by Jacobi for Bhāmaha's priority rests on the remark made by Dandin (ii, 220) at the close of his illustrations of the figure Atiçayokti, hyperbole.

¹ Bhandarkar Commemoration Volume, p 393

² Ibid, p 411 ³ SBA, 1922, p 218.

alamkārāntarānām apy ekam āhuḥ parāyaṇam vāgīçamahitām uktim imām atiçayāhvayām.

This he holds to be a sarcastic reference to the doctrine of Bhāmaha (ii, 85) which seems 1 to make out that hyperbole lies at the basis of every figure of speech (vakrokti).

sarṣā sarvaiva vakroktīr anayārtho vibhāvyate. yatno 'syām kavīnā kāryah ko 'lamkāro 'nayā vinā⁹

Daṇḍin, in Jacobi's opinion, rejected this doctrine of Bhāmaha on the score that he himself held the view that the quality, metaphorical expression, lay at the root of poetry (ii, 100).

tad etat kāryasarvasvam samādhir nāma yo guṇah kavīsārthah samagro 'pi tam enam anugacchati

This doctrine of Daṇḍin's, in his view, marks an advance from the point of view of supporters of the Dhvani theory of poetry from that of Bhāmaha, in so far as metaphor has for poetry the function of conveying to us what is not and what cannot be expressed in words

The argument is ingenious, but scarcely capable of standing close examination. The suggestion that Dandin is attacking the doctrine that hyperbole plays a part in all figures by substituting for it the doctrine that metaphor lies at the root of poetry, has no foundation in Dandin's own words There is no trace of any connection between the two ideas in his mind, still less of his feeling them to be repugnant. He merely mentions that some hold that hyperbole is involved in figures without either endorsing or denying the doctrine, and in a totally different context he exalts the importance of metaphor Of the Dhvani doctrine he shows no knowledge. Jacobi 2 claims that he is referring to the Dhvanikāra in the first verse of his treatise where he alludes to earlier views in the words bhāktam āhus tam anye. But Trivedī 3 is equally convinced that it is to Bhāmaha that the reference is made, relying on Anandavardhana's observation 4 regarding Bhamaha's doctrine of hyperbole in its relation to figures generally The only safe conclusion is that the passages in either author have no definite relation to the other; we must free ourselves from the delusion that what is preserved is all that existed, and remember that Dandin and Bhāmaha had before them a wide literature which for us is lost probably forever.

¹ See Ānandavardhana, *Dhvanyāloka*, p. 208

² SBA., 1922, p 225
³ Bhandarkar Commemoration Volume, p 419.

⁴ Dhvanyāloka, pp 207, 208, 211

The danger of seeking to read Dandin in the light of Bhāmaha is strikingly illustrated by Dr. De's interpretation of Kāvyādarça, ii, 220, which he interprets as an effort to reconcile his views with those of Bhāmaha, a view disproved sufficiently by the fact that Dandin merely gives the view as one expressed by some, and thus does not make it his own.

A third argument at one time adduced ² — perhaps now abandoned — by Jacobi rests on the remark of Dandin (ii, 363):

bhinnam dvidhā svabhāvoktir vakroktiç ceti vānmayam.

which is, he holds, based on the dictum of Bhāmaha (i, 30):

yuktam vakrasvabhāvoktyā sarvam evaitad isyate

But there seems no ground for this claim. The term Svabhāvokti in Daṇḍin applies to a figure, indicating minute description by characteristics, as his definition (11, 8).

nānāvastham padārthānām rūpam sāksād vivṛnvatī svabhāvoktīç ca jātīç cety ādyā sālamkṛtīr yathā

and still more his illustrations show To suppose that he uses the term in ii, 363 in a different sense of ordinary speech generally is clearly illegitimate. In Bhāmaha, on the other hand, the usage is clearly other. We are definitely told (1, 36).

vakrābhidheyaçabdoktir istā $v\bar{a}c\bar{a}m$ alamkṛ t_lh

and in ii, 93 the recognition of Svabhāvokti as a figure is given as by other writers.

svabhāvoktır alamkāra ıtı kecit pracaksate arthasya tad avasthānam svabhāvo 'bhihito yathā.

The two positions differ essentially, and Dandin's appears to be the older. Bhāmaha goes beyond the standpoint of Dandin, he insists that mere description, however truly it expresses the essentials, is not enough to make an Alamkāra. There is requisite an element of Vakratā, or from another point of view of Atiçayokti, thus Bhāmaha preludes the position later laid down more completely, and now consciously, by the Vakroktijīvitakāra, which finds in Vakrokti the essence of poetry. From his standpoint Bhāmaha is quite in order in denying to Dandin's figure Svabhāvokti, the name of a figure.

¹ Sanskrit Poetics, 11, 62, n. 21

² ZDMG., lxiv, 755.

But Dandin represents a much more natural view, and one which may with practical certainty be regarded as earlier than that of Bhāmaha The point is worth closer consideration because it has been obscured by Jacobi's treatment, and misapprehension of it has rendered less effective his discussion of Vakroktv. He holds still 2 that Dandın and Bhāmaha use Svabhāvoktı in two quite different senses. In the one sense it is merely ordinary description, in the other it is a form of Alamkāra The nature of this form of Alamkāra Jacobi asserts to be die Darstellung einer platonischen Idee, supporting this view by the term $J\bar{a}ti$ which is also applied to it. But this really is not in accord with the much simpler view of Dandin, which fortunately is made clear by his examples as well as by his definition He illustrates in sequence instances of Jāti, Kriyā, Guna, and Dravya, the first by a description of the characteristic features of parrots, the second by the movements of an enamoured dove, the third by the qualities of the contact with the beloved, and the fourth by a description of Civa with his characteristic marks, and he remarks that this sort of description prevails in Castras. What is meant, therefore, is nothing philosophical, but an exact description of essential characteristics. Why is this called an Alamkāra by Dandin? Because he has (11, 1) a wide definition of Alamkāra which makes all things which lend beauty to a poem Alam $k\bar{a}ras$

 $k\bar{a}vya\varsigma obh\bar{a}kar\bar{a}n\ dharm\bar{a}n\ alamk\bar{a}r\bar{a}n\ pracaksate.$

Dandin in fact is taking the natural view which suggests itself on analysis of any $K\bar{a}vya$ It must contain descriptions which do not substantially deviate from those in Çāstras, as well as what may be termed generically Vakrokti. Dandin, therefore, solves the problem of poetry for himself by acknowledging the plain fact, the stock in trade $(v\bar{a}nmayam)$ of the Kavi consists of $Svabh\bar{a}vokti$ and Vakrokti, and the two fall under the generic head of $Alamk\bar{a}ra$ In the former of the two divisions there is clearly no place for the use of $double\ entendre$, Clesa; in the latter it is specially appropriate as the first half of $K\bar{a}vy\bar{a}darca$, ii, 363 tells us

çleşah sarvāsu pusnātı prāyo vakroktısu çrıyam.

Bhāmaha refines on this, and in him we find Svabhāvokti in a new light; he does not deny that Kāvyas must contain Svabhāvokti, but he has adopted a theory of Alamkāra based on Vakratā or Aticayokti, which.

¹ Cf ZDMG, lxiv, 751, 754, 758, Bernheimer, 588, n. 1

² SAA, 1922, p 225.

as we have seen, Daṇḍin merely records as held by some, and, accepting this theory, he cannot adopt Svabhāvokti as an Alamkāra. This is an obvious and simple explanation of the facts and one which prevents us from holding that Daṇḍin in the same book of his work, and writing on the same topic, uses Svabhāvokti in two perfectly different senses without warning to the reader. Moreover we escape the necessity of reading into Danḍin's Svabhāvokti, as Dr De 1 must do, a refined interpretation which is not suggested by Daṇḍin, and which is plainly quite incompatible with his examples.

It is due to this misunderstanding that Jacobi ² claims, as a fourth clear case of borrowing by Dandin, Kāvyādarça, ii, 235

hetuç ca süksmaleçau ca vācām uttamabhūsanam

as compared with Bhāmaha, 11, 86.

hetuç ca süksmo leço'tha nālamkāratayā matah.

Here, however, there is obviously no evidence of borrowing by Daṇdin, and Jacobi later seems to regard the treatment of these figures by the two authors rather as instances of different reactions to an older list with which both dealt in their special ways. As a matter of fact, however, great importance attaches to the words which follow in Bhāmaha and give his reason for rejecting the figures in question

 $samud\bar{a}y\bar{a}bhidh\bar{a}nasya\ vakroktyanabhidh\bar{a}natah$

It is clear that Bhāmaha rejects the figures as instances of Alamkāra on the same ground that he rejects Svabhāvokti, it is that they all lack the element of Vakrokti Svabhāvokti expresses Jāti and so forth, these Samudāya, without an element of Vakrokti This deliberate use of Vakrokti is the determining point of a more mature and elaborate view than the simpler attitude of Daṇdin The process of development is clear some authority developed the theory that Atiçayokti was involved in Alamkāras, this was merely current, not generally accepted, in Danḍin's day, by Bhāmaha's time or by Bhāmaha himself the doctrine was carried to the point of insisting that Atiçayokti was essentially involved in the conception of Alamkāra, and those forms of expression which did not contain this feature were refused rank as Alamkāras

Jacobi, it may safely be assumed, would no longer lay stress on similarity of the definitions of Bhāvikatva which in Daṇḍin (ii, 364) runs.

¹ Vakroktijīvita, p xiv, n 17

² ZDMG., lxiv, 754, n 1, but see SBA., 1922, p 218

tad bhāvikam iti prāhuḥ prabandhaviṣayam guṇam bhāvah kaver abhiprāyah kāvyesv asya vyavasthttiḥ.

and in Bhāmaha, iii, 52, presents almost the same first line followed by

pratyaksā iva drzyante yatrārthā bhūtabhāvinaķ.

To this there are many other parallels 1 which could be added, but it is obvious that nothing can be made out of such similarities, which may merely be due to common derivation from current theories and contain no conclusive sign of relative priority.

Jacobi, however, still holds,2 though with less confidence than formerly, to the belief that the discussion of the relations of Kathā and Ākhyāvikā in Kāvyādarca, i, 23-30 is aimed at that in Bhāmaha, i, 25-9. Dandin, with much good sense, dismisses the attempt to discriminate in essence the two forms of literature, while Bhāmaha accepts as valid criteria formal distinctions of no aesthetic value. Jacobi holds that Bhāmaha cannot have known Dandin's work, since otherwise he must have taken note of his destructive criticism, and that Dandin is, therefore, the later, unless indeed some predecessor of Bhāmaha had similarly treated the subject This he deems unlikely, especially as Amara has quite a different distinction of the two classes of literature This is clearly unconvincing. As Jacobi himself admits, Dandin's criticism was not sufficient to keep Anandavardhana, Abhinavagupta, Rudrata, Hemacandra, and others from upholding the distinction of the two classes, and there is not the slightest ground for supposing that Dandin knew Bhāmaha's text. The latter lays down for the Kathā.

anyaih svacaritam tasyām nāyakena tu nocyate svagunāviskṛtim kuryād abhijātah katham janah?

Daṇḍin has

nāyakenawa vācyānyā nāyakenetarena vā svaguņāviskrīyā doso nātra bhūtārthaçansinah.

It is impossible from these passages to assert that Dandin, not Bhāmaha, is the borrower, taken by themselves the statements may each be the source of the other by way of opposition, or they may be based on current controversy without definite relation. A decision on the point really depends, apart from other considerations bearing on the relative priority of the authors, on the question whether in the im-

¹ Cf Hari Chand, op. cut., p 72.

mediately preceding passage we have a critique by Daṇḍin of Bhāmaha or by Bhāmaha of Daṇḍin, and reasons will be adduced below to show that the latter is the true explanation of the relation of these passages.

Jacobi does not adduce, and probably would not accept, certain of the arguments adduced by other scholars to establish the priority of Bhāmaha. Thus Dr. De 1 holds that when Daṇdin (ii, 244) cites as a valid illustration of the figure *Hetu*

gato 'stam arko bhātīndur yāntı vāsāya paksınah.

he is attacking Bhāmaha (ii, 87) who rejects the figure and describes the verse as bad poetry, to which some give the name $V\bar{a}rtt\bar{a}$. The conclusion, however, is wholly illegitimate. Bhāmaha's mention of $V\bar{a}rtt\bar{a}$ shows that he is not attacking Dandin or at least has others in mind, nor is there any reason to show that Dandin is dealing with Bhāmaha A common use of older material is here strongly suggested. It would indeed be different if we believed that Dandin's examples were necessarily or even normally his own composition, but in the absence of any evidence on this head no reliance can be placed in the conjecture

Nothing again can be established from the fact that Bhāmaha (i, 41) gives as an instance of the fault known as Avācaka the words himāpahāmitradharair vyāptam vyoma, while Dandin (iii, 120) cites the whole verse as an example of the form of riddle called Parihārikā. To see in this, with Dr De,² evidence of criticism of Bhāmaha by Daṇḍin, is clearly impossible; the curtailed citation might be taken as proof of the contrary relation, but independent treatment of common sources is again a legitimate hypothesis

No other passage seems to have been adduced of any value for proof, and there seems no possibility of resisting the conclusion that we have not a single passage in which we can say with any validity that Bhāmaha is probably criticised by Daṇḍin. The question then arises whether any passage may be taken as proving that the work of Daṇḍin was used by Bhāmaha. As we have seen, those passages adduced to prove Bhāmaha's priority have also been used for the purpose of establishing exactly the opposite conclusion, and probably with about equal or even superior justification. Of other passages many have no probative value, and need not be considered, but there remain points which must be assigned some value.

¹ Sanskrit Poetics, 1, 65.

² Sanskrit Poetics, 1, 65

Firstly, it must be observed that, while Bhāmaha expressly tells us that he has composed many of the illustrations of the rules laid down in his Kāvyālamkāra, Daṇḍin in no case refers to or criticises one of these illustrations. The importance of the point is best realized by reflecting that both authors attach importance to their examples, and that, as we have seen, two of these examples are the object of divergent views Like all arguments ex silentio this consideration has no conclusive weight, but it may be set against the probability of use of Bhāmaha by Daṇḍin, and it suggests, having regard to the importance of Bhāmaha's work, that Dandin wrote either before it was written or before it became well known

Secondly, stress has always been laid by supporters of Dandin's priority on the fact that, while he adopts as vital the distinction of the *Vaidarbha* and *Gauda* styles, the attitude of Bhāmaha is severely critical (1, 31, 32).

Vaidarbham anyad astīti manyante sudhiyo 'pare tad eva ca kila jyāyas sadartham api nāpare Gaudīyam idam etat tu Vaidarbham iti kim prthak gatānugatikanyāyān nānākhyeyam amedhasām.

It is idle to deny the a priori probability that this is a criticism of Dandin in the usual insulting manner of Bhamaha Jacobi seeks to remove this impression by pointing out that long before Dandin the poetry of the Gaudas enjoyed no high repute, seeing that Bana characterises it as aksaradambara (Harsacarıta, ver 7). This argument is only technically valid if one believes that Dandin has been proved later than Bana, and as we have seen, there is no real evidence or probability of this. Nor is there any value in Jacobi's further observation that Dandin, though setting out the two main styles, recognizes that there are intermediate shades and types, for even so Bhāmaha's criticism would be justified, apart from the fact that Indian critics, like those of other lands, naturally feel themselves entitled to seize upon the salient characteristics of any doctrine which they condemn, ignoring saving causes which might modify their censure. Nor again is it any argument to say that Bhāmaha recognizes the division as traditional, for the point of the term gatanugatikanyāyāt may well be that he is reproaching Dandin with following blindly a wrong tradition It must in fact be admitted that the view which sees in Bhamaha's verses a deliberate attack on Dandin remains by far the more plausible. It does not attain certainty, but it is a much stronger argument than any adduced on the opposite side.

Thirdly, it is argued that Bhāmaha's verses (ii, 37, 38):

yad uktam triprakāratvam tasyāh karçcin mahātmabhiḥ nindāpraçansācīkhyāsābhedād atrābhīdhīyate sāmānyagunanīrdeçāt trayam apy udītam nanu.

are directed against the $K\bar{a}vy\bar{a}darça$, 11, 30–32 where the three forms of $Upam\bar{a}$ are one after the other defined. Dr. De ¹ contends that the attack cannot be addressed against Daṇḍin, because he does not set up only three kinds of $Upam\bar{a}$. This, however, is clearly an untenable view, resting on a misapprehension of the term $triprak\bar{a}ratvam$ which has a simple sense as directed to a connected group of three, and has nothing to do with the total number of divisions of the $Upam\bar{a}$ in Danḍin. It is also to be noted that Bhāmaha (11, 32) rejects $m\bar{a}lopam\bar{a}dih$ while Danḍin (11, 42) accepts the $M\bar{a}l\bar{a}$ and other forms.

Fourthly, it is pointed out that the view of Gunas adopted by Bhamaha is a far more advanced one than that of Dandin, and is easily explained as due to the obvious defects of the system of that author The historical process, as traced by Jacobi 2 himself, without apparent recognition of its opposition to his own view, is that Bharata gives the Dosas of poetic composition, and then treats the Gunas as their opposites. Dandin felt this to be inadequate, as making the essential qualities of poetry mere negations of defects, although historically it was natural to begin with defects and then advance to the discovery of qualities He, therefore, bases his discrimination of the two Mārgas, Vaidarbha and Gauda, on the possession by the former of those characteristics which make good poetry and which are lacking in the latter. But the difference of the definition of the several Gunas in Bharata and Dandin sufficiently showed how difficult it was to arrive at clear results, and Bhāmaha found a solution by reducing the number of Gunas to three, which, though this is not stated in Bhāmaha, rest on fundamental distinctions of the manner in which the mind of the reader was affected. The three Gunas are Mādhurya, beauty, Ojas, force, and Prasāda, clearness, and Bhatta Nāyaka 3 bases the distinction on the melting, the uplifting, and the expansion of the Citta. We need not claim for Bhāmaha a precise appreciation of the emotional states to which his Gunas were to correspond, but the reduction to three must clearly have been based on some principle of this kind, and in any event the advance on Dandin is enormous. It is significant that the Dhvanikāra and the majority of authorities from Mammata to

¹ Sanskrit Poetics, 1, 68, n 2

³ Cf Dhvanyāloka, pp. 68, 70

² SBA, 1922, pp 223 f

Viçvanātha accepted the new division, and it is a strong argument against Bhāmaha's priority that Daṇḍin evidently ignores it entirely.

Fifthly, it is noteworthy that Bhāmaha recognizes besides the ordinary three topics of the Çāstra, Guṇa, Doṣa, and Alamkāra, a fourth, that of the training of the poet. This is fully recognized and interestingly explained in later writers such as Vāmana, Rudraṭa, Rājaçekhara, and Hemacandra, but it is passed over in silence by Daṇdin. It is, of course, a very natural addition to the ordinary stock in trade of writers on poetics, but the evidence is strongly in favor of its being an innovation after Daṇdin's period. Jacobi meets this contention by the suggestion that Daṇdin handled the topic, or meant to handle it, in the Kalāpariccheda referred to in iii, 171, perhaps as a counterpart to the treatment by Bhāmaha in his fifth chapter of the doctrine of the means of knowledge. This clearly is a guess without weight, and that it should have been advanced without any authority of any kind may be regarded as satisfactory proof of the difficulty of supposing that Daṇḍin was later than Bhāmaha.

Sixthly, it is significant that Dandin (ii, 366) expressly alludes to the Lakṣanas and admits them to the rank of Alamkāras. These are, of course, the Kāvyalaksanas of Bharata which are familiar from their description by Viçvanātha, but which, save for this mention by Dandin and a belated revival by Jayadeva, disappear from textbooks of poetics. This is a clear sign of archaism, and is significant as indicating the process of emancipation of the Çāstra from connection with the drama, a process carried further by Bhāmaha than by Dandin

Seventhly, against the fact that there is the late evidence of commentators apparently in favor of Bhāmaha's priority must be set the fact that in Namisādhu's commentary on Rudraṭa's Kāvyālamkāra we find the phrase (p. 2): nanu Dandimedhāvirudrabhāmahādikṛtāni santy evālamkāraçāstrāni? The order in such a passage is naturally that of historical order, and this view is, of course, in some measure supported by the fact that we know that Medhāvirudra or Medhāvin¹ was actually a predecessor of Bhāmaha It is at any rate of greater probative value than the view of the late scholiasts. Nor is it in the slightest degree inconsistent with the not infrequent passages in which Bhāmaha appears in phrases² such as "the old writers, Bhāmaha, and so forth," for Bhāmaha was unquestionably for these later writers the head of a school, and it is significant that the phrase sometimes adds to him Udbhaṭa, his exponent and follower in the tradition.

¹ Cf P V Kane, JRAS, 1908, pp. 545 f

² Harı Chand, op cit, p 70

Eighthly, there must be noticed a passage alluded to above which presents considerable difficulty of interpretation. In the Kāryādarça (i, 21, 22) Daṇḍin has:

gunatah prāg upanyasya nāyakam tena vidviṣām nirākaranam ity esa mārgah prakṛtisundarah. vançavīryaçrutādīni varnayitvā ripor api tajjayān nāyakotkarṣavarnanam ca dhinoti nah.

Bhāmaha has (i, 22, 23):

nāyakam prāg upanyasya vançavīryaçrutādibhih na tasyaiva vadham brūyād anyotkarṣavidhitsayā yadi kāvyaçarīrasya na sa vyāpītayesyate na cābhyudayabhāk tasya mudhādau grahanam stave.

Dr. De 1 seeks to avoid any contact between these two passages by holding that the meaning of the latter is merely "disapproval of a disastrous ending, perhaps in conformity with a similar conventional prohibition in the drama." Now Bhāmaha is far from partial to dramaturgy and it is somewhat surprising if it was from this source that he derived his rule. But what makes this view impossible is the extraordinary similarity of language in the two stanzas; it cannot be an accident that Bhāmaha has nāyakam prāg upanyasya, vancavīryacrutādibhih, and anyotkarsavidhitsayā in a context where they directly recall Dandin's prāg upanyasya nāyakam, vançavīryançrutādīni, and nāyakotkarsavarnanam. The possibilities of accidental likeness are far exceeded here The argument of Bhāmaha is quite simple, you must not make a hero of a man by extolling his race, heroism, and learning, and then destroy him to exalt another person as hero, the person who is to come out victorious at the end should be extolled also in the beginning. We have a direct attack on Dandin's doctrine and it becomes much more probable that the following passage in Bhāmaha, which in itself is not conclusive, may be really directed against Dandin.

The conclusion, therefore, seems to be that there is sufficient evidence to turn the scales strongly in favor of the view that Bhāmaha actually knew and attacked Daṇḍin. The arguments in favor of this view are much stronger than those adduced against it and at the least render the assumption of the priority of Bhāmaha extremely hazardous. Possibly the mistaken idea that Bhāmaha belonged to c. 600 A.D., which was once suggested by Jacobi, may have encouraged the view that he was anterior to Daṇḍin, and this has been adhered to even when that inaccurate opinion was corrected by its author.

¹ Sanskrit Poetics, 1, 68, n 2

² Bhamsattakaha, p 54*, n 1.

It remains to consider, disregarding the date of Bhāmaha, the upper limit to be assigned to Dandin. We may assume that the Kāvyādarça and the Dacakumāracarīta are by the same hand; the evidence 1 adduced against this theory is clearly of no substantial value. We are assured by Rajacekhara 2 that Dandin wrote three works. The guesses at the third are not happy. Pischel's Mrcchakatikā, Jacobi's Chandoviciti, may be dismissed, nor is Hari Chand's Anāmayastotra worthy of serious consideration. The Kalāpariccheda is prima facie more plausible, since the form in which it is referred to by Dandin (iii, 171) is rather suggestive of a treatise of his own But the very form of the title seems to indicate merely a chapter additional to the three which make up the Kāvyādarça as we have it. If ever written, it may have served as the model of Bhāmaha's work on this topic, which is alluded to in the Kāmadhenu commentary on Vāmana (p 29) The riddle of the third work remains, accordingly, still unsolved The Dacakumāracarita necessarily offers us little material for dating its author, yet something may be deduced from its contents. Its picture of India suggests that it was not composed under the Gupta empire or that of Harsavardhana, and that it may, therefore, fall in the period between these two events 3 The style is certainly not inconsistent with the view that Dandin was a predecessor both of Subandhu and of Bana It may be granted that, as the Kāvyādarça is sufficient to show, Dandin was well able to display skill in the Kāvya manner, and that Ucchvāsa VII with its avoidance of any labial letters is a distinct tour de force. But that does not in the least alter the fact that Dandin writes a far more natural style than either of the writers named, and that it is much more probable that he preceded than that he followed Bana.

Efforts, as we have seen, have been made to prove use of Bāṇa, but obviously without any cogency. To these may be added the suggestion of Hari Chand that Tarunavācaspati is right when he holds that Daṇdin's statement (i, 25), that there are exceptions to the rule that the $\bar{A}khy\bar{a}yik\bar{a}$ should be narrated by the hero, is an allusion to the Harsacarita of Bāṇa in which the story of Harṣa is recounted by Bāṇa himself. As a matter of fact we have not the slightest reason to adopt this suggestion, which naturally occurred to Tarunavācaspati, because he, like ourselves, had not before him the older $\bar{A}khy\bar{a}yik\bar{a}s$ and $Kath\bar{a}s$ on which the rules of Daṇḍin's predecessors were based. Whether we

¹ G J Agashe, IA, xlıv, 67 f

³ Collins, The Geographical Data of the Raghuvamśa and Daśakumāracarita, p. 46.

⁴ Op cut, p 81

take Bhāmaha's account or that criticized by Daṇḍin, we have every assurance that they were framed before Bāṇa wrote or at any rate before his works became of importance as models. In Rudraṭa we find that the Harsacarita and the Kādambarī have succeeded in winning their way into recognition so that the descriptions of the two types conform generally to their nature.¹ Daṇdin and Bhāmaha on the contrary preceded this result, were it otherwise, we must have found a very different presentation of the case. We can easily understand by observation of the accounts in the authors of treatises on the drama how definitions of species of literature were drawn up; they rested on imperfect inductions in which minor points were treated as fundamental; Daṇḍin reacted against this, while Bhāmaha, who is often more wedded to tradition, was content to accept the tradition as handed down.

We may, therefore, place Daṇḍin with some confidence before Bāṇa and Subandhu That he was later than Kālıdāsa is indicated by certain hints Thus in Kāvyādarça, i, 45:

prasādavat prasīddhārtham indor indīvaradyuti laksma laksmīm tanotīti pratītīsubhagam vacah

there has been seen a reference to the Cakuntalā, i, 20.

malınam api hımānçor laksma laksmīm tanotı.

Again in Kāryādarça, 11, 129:

sundarī sā bhavaty evam vivekah kena jāyate? prabhāmātram hi taralam drçyate na tadāçrayah.

there is a hint of Çakuntalā, 1, 25

mānusīsu katham vā syād asya rūpasya sambhavah? na prabhātaralam jyotir udeti vasudhātalāt.

Or again for Kāvyādarça, 11, 286.

yasyāh kusumaçayyāpı komalāngyā rujākarī sādhıçete katham tanvī hutāçanavatīm cıtām⁹

a model may be found in the pathetic address in the Raghuvança, viii, 56.

navapallavasamstare'pı te mṛdu dūyeta yad añgam arpıtam tad idam visahısyate katham vada vāmoru citādhırohanam?

¹ De, BSOS, m, 515.

These instances might be increased, but, without strictly proving dependence, they do give substance to the belief that Daṇḍin either himself used, or cited poets who used, Kālidāsa as a model. If Daṇḍin chose, he could doubtless easily have written these verses, and it may well be, though we cannot prove it, that a considerable proportion of his illustrations is of his own composition.

If Daṇḍin is later than Kālidāsa, it is only natural that he should know Bhāsa, and there is no real doubt that it is from him, and not from the $M_{rechakatik\bar{a}}$, that he takes the famous verse

limpatīva tamo 'ngāni varsatīvānjanam nabhah

The conclusion thus suggested, which places Dandin some time before 600 A D., would, of course, be entirely overthrown, were we to accept the ingenious theory of Rāmakrsna Kavi² which finds a third work for Dandin in the Avantısundari, a Kathā, and from that fragmentary text, supplemented by the metrical Avantisundarīkathāsāra, deduces that Dandin was the great-grandson of a certain Damodara, who was the protégé of a Pallava king Sınhavısnu, and who was identical with the famous poet Bhāravi It must be remembered that the date of Bhāravi is not definitely ascertained, and it is suggested that Sinhavisnu reigned about 500 A.D., so that it may be held that the date which would thus be attained for Dandin as his great-grandson would be plausible enough But it is clearly impossible to accept this evidence seriously, for two reasons, either of which must be conclusive. Firstly, there is the fact that the fragments of the Avantisundari do not in any way identify Dāmodara with Bhāravi, and, secondly, it is not in the least clear that even the Kathāsāra, which has no independent authority, does anything of the sort It merely says (i, 22) of Dāmodara:

sa medhāvī kavır vidvān bhāravih prabhavo girām anurudhyākaron maitrīm narendre V isnuvardhane.

Nothing but ingenuity will enable us to see in bhāravīh in this stanza a proper name or Biruda, and, even if it were so to be taken, there is nothing whatever to indicate that the author of the Kirātārjunīya is meant. It may be added that, so far as one can judge from the deplorably mutilated Avantīsundarī, there is no reason whatever to accept identification of the author Daṇdin, son of Vīradatta and Gaurī, grandson of Manoratha, with the author of the Kāvyādarça and Daçakumāracarita.³

² Ed of Avantisundari (Daksinabhāratī Series, no 3, 1924).

³ See S K De, Ind Hist Quarterly, 1, 30 ff

The relation of the Bhatti-Kāvya to Daṇḍin unfortunately remains dubious, as does the actual date of Bhaṭṭi's work, though the mention of King Grīdharasena of Valabhī assigns it roughly to a period between 550 and 650 and Moreover, it must be remembered that we have not Bhaṭṭi's authority for the names of the figures which he illustrates; these rest on MS. tradition or the commentary Jayamangalā. The result of Jacobi's own researches is to show that Bhaṭṭi used a different source, or rather sources, from Bhāmaha and Daṇḍin, whose versions may conceivably go back to a common origin. Nothing is adduced by Jacobi to establish the priority of Bhaṭṭi to Daṇḍin, and there appears in fact no reason to assume any relation of dependence on either side. In the case of Bhāmaha, as we have seen, there is no real doubt as to Bhaṭṭi's priority, but it is not suggested by Jacobi that in his treatment of Alamkāras he served as the model for that writer

ŚRNGĀRIC ELABORATION IN ŚĀKUNTALA ACT III

By SHRIPAD KRISHNA BELVALKAR

IN an attempt to rise above the recensions of the Sākuntala and to formulate something like an approximation to its Ur-text 1 the crux of the critique, no doubt, is the problem of the Srigaric elaboration that we find in the Kāshmīr-Bengāli families of MSS as compared with the Deccan and South-Indian families of MSS In its shortest form, as given by Cappeller, the scene occupies 3 stanzas and 23 lines of prose, from the exit of the two friends at page 34, line 14, to their reentrance with Gautami at page 35, line 24. Patankar's so-called "purer" Devanagari text differs from Cappeller's only by the retention of the stanza "Gāndharvena vıvāhena," etc., which Cappeller finds "uberflussig," (Einleitung, x11) On the other hand, Pischel's edition of 1877 emarges the scene to about 13 stanzas and 78 prose lines, while the text of the Kashmir MS, apart from slight variations in readings, differs from Pischel's edition only by the addition of five prose lines after Pischel's stanza 79, while it omits Pischel's stanza 80 and the two prose lines before it, as also the one-line address behind the curtain to the Cakravaka-female after stanza 89 The longer text is accordingly about four times as large as the shorter, and there is so much scope, and even prima facte justification, therein for forming a subjective evaluation that I had long despaired of ever being able to reach a satisfactory solution of the problem. A chance remark made by that acute French scholar, Professor Sylvain Lévi, in his epoch-making work, Le Théâtre Indien, note 1 to page 182 (Appendice, page 37), set me, however, on the track, and I believe that it is now possible to arrive at a text of the scene neither too short nor too long, a text which retains only the dramatically essential elements, and at which no "Puritan of the type of Monier Williams" needs any longer cavil. I do not propose, for obvious reasons, to give here the actual tentatively constituted text, but only discuss the broad lines along which it can be formulated

The strongest argument of the champions of the Kāshmīr-Bengāli text has been of course the fact that the stanza "Caruṇā sphuritena,"

¹ The principles underlying such an attempt, and certain results to be obtained by their application, I have discussed in a paper recently contributed to Asia Major, vol. 11, fasc 1, pp 79-104

etc. (Pischel, 88), which occurs only in the longer version, has been quoted by Viśvanātha, the author of the Sāhityadarpana, who belongs to the first half of the fourteenth century. Saradaranjan Ray 2 also points out that in the twelfth century Vardhamana quotes the latter half of stanza 83 of the elaborated version as of Kālidāsa. The rejoinder on the other side is that this simply proves that the "tampering" with the text was already in Bengal an accomplished fact by the twelfth or thirteenth century, and that it is, therefore, no wonder that Bengal writers like Viśvanātha show their acquaintance with it. But if now it can be shown that even so early a writer as Srīharsa in the Ratnāvalī (first half of the seventh century) has imitated the longer Srigāric version, it will have to be in that case concluded that some part of the "elaboration" probably comes from Kālidāsa himself. Now, Sāgarīkā in the plantain-bower, in the second act of the Ratnāvalī, is a close enough parallel to Sakuntala in the cane-bower in the third act of the Sākuntala. Both are the suffering victims of the God of Love, and are introduced in the scene with the standard paraphernalia of a bed of lotus-leaves together with a wreath and wristlets of lotusstalks, and so forth The hero in both the plays describes the bed and the other objects in the bower from which the heroine has just departed The herome in Srīharsa's play returns to the bower and overhears the words of the hero as he places upon his bosom a lotus-stalk trinket, which she had unwittingly dropped down In Kālidāsa's play this happens only in the longer version of the scene This should establish a prima facie presumption in favor of the longer version, provided, of course, that it can be proved that Sriharsa was a close student and an imitator of Kālidāsa Now, that Kālidāsa's works were diligently and appreciatively studied at the court of Srīharsa can be safely concluded from the encomium which his court-poet Bana bestows upon Kālidāsa (Harsacarita, Introduction, stanza 17)

> Nırgatāsu na vā kasya Kālıdāsasya sūktısu | Prītır madhurasāndrāsu mañjarīsvīva jāyate ||

And as to Śriharsa's imitating Kālıdāsa, we have been able to gather, even in a hurried reading of Śriharsa's *Priyadarśikā*³ for the purpose, the following clear-enough instances, besides the imitation of the "Bee episode" pointed out by Sylvain Lévi

- ¹ Nir Sag, ed of 1922, p 346
- ² Sākuntala, 6th edition, Calcutta 1922, p 284
- ³ Parallels are also to be found in the Nagananda, but it is not intended to be exhaustive on the point

Priyadarênka, i, 8. Priyadarênka, 11, 3

- "Sarisā sarise rajjanti, duve ettha ummattā" (*Priyad.*, iii, 4, 16).
- "Diaham rattim vi tujjha anurāo" (*Priyad.*, p. 39, end, Vani Vilas ed, 1906).

- "Tumam dāva asahāmī jāe pudhavīnātho samīve vattadı" Šāk, (Pıschel ed, p. 59, end)

But why multiply instances? Nothing can carry conviction if the cases already cited have failed to evoke it

A careful study of the contexts in which the above parallels occur should indicate to us the way in which Sriharsa modifies the ideas and images of Kalidasa to suit his own purpose I choose just one case by way of illustration Sanskrit poets are in the habit of mentioning a number of creepers that blossom in the spring, among others the Mādhavī, which puts forth flowers in the month of Mādhava, — Vaiśākha, or April-May, and the Navamālikā, whose flowering season comes about a month later, in what is known as the Grisma-rtu Now, it will be remembered that the Sākuntala opens at the very beginning of the Grīsma, and hence the creeper Navamālikā is described in the opening act as navakusuma jovvanā, or "showing forth her youth in the form of new blossom. The other creeper, Madhavi, is not at all mentioned in the Devanagari recension of the play In the Kashmir recension (which in my opinion preserves the most genuine version of the gardenscene) the creeper is mentioned, but only to motivate the heroine's movement away from the tree behind which the hero was standing concealed, a movement which Priyamvadā stops with the words, Cittha ıdhayyeva dāva baularukkhasamīve Tae samīvatthidāe ladāsanādho via baularukkhao padibhādi The Bengāli version of the scene, as I have elsewhere 1 shown, considerably disturbs the sequence

¹ Asia Major, vol 11, fasc 1, p. 101, also Sir Asutosh Mookern Silver Jubilee, vol. iii, pt. 2, p 356.

of the speeches and is responsible for large interpolations, amongst others the reference to the Mādhavīlatā and its blossoming out of season (Asamae kkhu esä ämülädo maulida mähavilada). In the Grismartu the Mādhavī can be properly described only as past its flowering season (adikkantakusumasamaā), — as the Kāshmīr MS. in fact describes it, - although the creeper may still put forth a few late buds now and then. If now we turn to Srīharsa's Ratnāvalī, we see the way in which the two-creeper motif has been adopted by that poet and turned to a slightly varying use The second act of the Ratnāvalī opens in the vernal season with the Mādhavī (for which the Queen in the play affects a partiality) in full blossom A Navamālikā creeper in the same garden is the favorite of the King and it has not yet commenced its normal flowering season The King, however, secures an akālakusumasamjananadohala, or a prescription for inducing the creeper to yield flowers earlier than its normal period, so as to prevent the Queen from securing an easy victory over him in that respect. Here the trend of events follows the regular botanical sequence, which the extra passage in the Bengāli recension altogether subverts, thereby betraying the hand of the unskilful interpolator, who may, possibly, have taken his cue from Śrīharsa's Ratnāvalī itself.

Reverting now to the Śringaric passage in the third act of the Śākuntala, the most cogent objection against its shorter version is the fact that it plays fast and loose with the time-indications of the scene The act opens a little before 2 PM, after the conclusion of the midday libation, and the heat of the day is still unabated when the King objects to Sakuntala's going out of the bower. If this indicates, let us say, about 4 P.M, Kālidāsa here seems to take nearly seven pages of Cappeller's edition to cover this period of two hours When Gautamī later enters at the conclusion of the Sringaric scene, it is already evening, and the poet, following the shorter version, requires scarcely half a page of the same edition to cover this subsequent period from 4 P.M. to sunset//It is not, of course, meant that a scene should take as much time in the acting of it as would be required in actual life for the happening of the action represented in the scene. This would be absurd. But within the same scene a careful poet is expected to observe the same time-ratio. The shorter version of the present scene fails to do so. The longer version, on the other hand, does observe the proportion and, what is more, interposes in the latter part of the scene a sentence indicative of the flight of time: Dināvasānacchāyeva puromulam vanaspateh (Pischel, 81). Continuing the scene from this point,

¹ Cappeller, p 28, l. 11.

² Aparınırvāno dwasah, ıbıd , p. 34, l. 24.

it will be noted that Pischel's stanza 83 has to be retained on the authority of Vardhamana, as also stanza 84, which is adopted in the Ratnāvaiī. If, farther on, we have to retain stanza 88, which is quoted by Viśvanātha, that necessarily involves the retention of the majority of at least the prose speeches leading up to it, including the episode of the rety ng of the lotus wristlet The essential features of the Srigāric scene have accordingly some kind of a warrant for their existence. On critical grounds I believe it possible to reduce the version of the scene as given by Pischel by the dropping of some five or six stanzas and twice as man he nes or prose; but against the genuineness of the scene when thus shore ned I know of no valid arguments that can be urged except the put Is ubjective ones. I am not here ignoring the cogent remarks of Prinelie S Ray, which would prove fatal to the longer version if it were concossible to meet them. He says "The passage describes at great length how the mrnālavalaya was picked up by Dusyanta and put back on the wrist of Sakuntala. This, however, contradicts the poet; for later on we find the mṛnālavalaya still lying in the grove. Compare Hastad bhrastam idam bisabharanam ity asajjamaneksano Nirgantum sahasā na vetasagrhād īśo 'smi śūnyād apı (infra), which is undoub'edly authentic, being common to all the recensions"

Now, as agains this argument it can be urged in the firstplace that, in spite of the remarks of the commentator Raghavabhatta anent the line, Stananyastośīram praśithilamrnālaikavalayam, namely, Mrnālasya ekam mukhyam valayam yatra . ekam ity anena valayāntarāsahatvam dhvanyate, we have really no right to conclude that Sakuntalā wore only one wristlet on each hand there must have been more than one so worn; only, as the word mrnālaika points out, they were all made of lotus-stalks alone. But even supposing that we agree to concede his point to Raghavabhatu, there was, one may urge, the other hand in any case, from which the equally loose wristlet could drop away any time — even subsequent to the retying of the wristlet by Dusvanta on one of the hands Finally, — and this is the most probable hypothesis, — just as the lotus-leaves placed on the bosom of the heroine to allay the heat had to be frequently replaced by fresher ones, so must it have been even with the wristlets Pischel's stanza 73 (āśuvimardita — v. 1, vwarnita — mrņālavalayāni), and particularly the stage-direction in the Ratnavali at the beginning of the bower-scene — Nalinipatraih śayaniyam mrnālair valayāni (note the plural) ca racayıtva parisistanı nalınıpatranı Sagarikaya hrdaye niksipati, as also the stanza, Sthitam urasi viśālam padminī-

¹ Op cit, p 284

patram etat, and so forth, in which the king describes the condition of one of the cast-off lotus-leaves. There was surely no dearth of lotus-stalks, so that the friends could prepare only two wristlets and no more. Ray's objection need not be held, therefore, to outbalance the weight of the other internal and external evidence thus far considered.

Finally, a word as to the way in which deliberate interpolations which are of the nature of weak paraphrases of the words of the original, or minor variations of a poetic theme successfully introduced by the author of the original, come to be made and adopted as genuine parts of the text. That this is mostly the work of the cleverar set of students and of self-opinionated pandits who combine in threaselves the functions of a second-rate critic and a third-rate poet, ymay be almost taken for granted; and in connection with this I recember how, in the upper clases of the high schools, we were often recuired by our Sanskrit teacher to versify simpler passages from the Kādambarī or the Daśakumāracarita, or put some well-known stanzas from Kālidasā or other classical writers into metres different from the original, while retaining intact (and even occasionally improving) the central idea of the verse and as many as possible of its words With some effort, I believe I can still reproduce some of my juvenile efforts, of which I thought very highly at the time and which I often wrote down in my own copy of the original Such exercises in composition have been all along current in India, and it is conceivable that from the margins of some of the MSS these jejune productions got ador-ted into the text of the original in the course of successive transcriptions from MSS, with perhaps the addition of the prefatory apr ca, or inhā hi, to mark their adventitious character, although it would 1 e too rigorous an application of the principle underlying this fact to reject as nongenuine every single stanza of a text that has these prefatory particles, as Cappeller seems to have done in his "kurzere Textform" of the play In dealing with all such interpolations, especially when they are of a respectable age as being vouchsafed for by more than one MS., the conscientious editor has often to fall back upon "higher criticism," which is often subjective in its nature, and the editor can inspire confidence in the conclusions that he may thereby reach only in proportion to the success that he may have already attained in applying to the same text the more objective canons of textual criticism.

¹ Ratnāvalī, 11, 12

A RĀMAYAŅA STORY IN TIBETAN FROM CHINESE TURKESTAN

By FREDERICK WILLIAM THOMAS

THE text which forms the subject of this modest study is by no means one that would have been expected to emerge from the now famous hidden library of Tun-huang (Chien-to-fung). The Indian literary works hitherto recovered from Chinese Turkestan, whether Sanskrit or Prākrit originals or versions in other languages, are almost exclusively of a Buddhist character. But here we have manuscripts exhibiting the story of the chief Brahmanical epic, the ādi-kāvya, with no infusion of Buddhism. From the extreme east of the region, the very border of China proper, comes a Tibetan version of the story of Rāma.

The first document (A) is one of the numerous rolls of thin yellow-colored paper which were inscribed with Chinese translations of Buddhist sūtras It is quite similar to those illustrated in Sir Aurel Stein's Serindia, plates CLXVI-CLXVIII, and along with them is deposited in the India Office Library It is of considerable extent, measuring 15 feet 1 inch by $10\frac{1}{2}$ inches (26 cm), and the Chinese sūtra for which it was originally pieced together fills with its regular columns (c. 18 5 cm) of finely written characters the whole of one side The Tibetan writing, 439 lines (25 cm in width), in a rather cursive, but for the most part elegant, hand, occupies the greater part of the reverse

This arrangement of the two languages, which is abundantly exemplified in other cases, affords ground for chronological deductions. We have many Tibetan documents, letters, memoranda, short treatises, and the like, similarly associated with Chinese texts. In all cases the Chinese was the prius. It is clear that during one period disused or appropriated MSS of Chinese sūtras were freely used by the Tibetans as stationery. The period of Tibetan domination in the eastern part of Chinese Turkestan extends from about 700 to about 850 a d , when the region passed under the control of the Turki-speaking Uigurs. We may safely conclude that most of the Tibetan writings from those territories belong to period 700–900 a d , and that the Chinese books which were turned to such use were of a somewhat earlier date.

The second document (B = Ch 80 IX 3), likewise fragmentary at the beginning, is of rough, yellowish paper, measuring 5 feet $1\frac{1}{2}$ inches in length by $11\frac{4}{5}$ inches (c. 29 cm.) in width. The one side is inscribed

with 99 lines, of the full width, in a large hand, which varies between a square formal type of characters and a more cursive style: it contains not a few additions and corrections in a smaller, cursive writing, which also appears on the back of the document. There we find in that hand, but, as regards the latter half, with larger and more formal characters, which may be due to the scribe of the obverse, 39 lines widthwise (c. 25 5 cm), plus one lengthwise line presenting another part (C) of the story and here also we find one correction similar to those on the obverse. Upon the evidence which we have of the variation of style there is nothing to show that a single scribe is not responsible for the whole.

The corrections on the obverse side correspond, so far as the common ground is concerned, with the readings on the reverse. Elsewhere they to a certain extent correspond with those in document A.

The reverse contains also, in a much blacker ink and partly in a different hand, some notes, drafts of letters and the like

The three 1 documents are mutually independent. C corresponds rather closely with A, but in such a manner that the two must be different translations of one original. B covers for the most part different ground from A, a preceding part of the story But in the common part it clearly goes back to the same original What was this original?

The story, as told, is in form and substance wholly Indian, and the interspersed verses are unmistakably Indian in style and sentiment. But we should seek in vain for an Indian version of the Rāmāyaṇa to which the text closely corresponds. It follows the general lines of the narrative in the Mahā-Bhārata (Vana-Parvan, chapters 274-290); but the incidents and the nomenclature differ widely, and indeed surprisingly. A few examples may be given

The demon Mālyavant is the son, not of Sukeśa, but of the "Yakśa" Kore (Kuvera), who is distinguished from Vaiśravana Daśaratha has only two wives (not named), and only two sons, whose names appear as Ramana and Lakśana (the latter always so spelled, the MSS showing no cerebrals). Sītā is a daughter of Rāvana (always named Daśagrǐva); and, when cast away and found by Indian husbandmen, she is in no way connected with king Janaka of Videha, who, in fact, is not mentioned The account of the search for Sītā differs in many details from what we find in the Mahā-Bhārata and the Rāmāyana. The birth of Lava and Kuśa is prior to Sītā's banishment and is quite differently narrated. The scandal which causes the banishment is reduced to a single saying overheard by Ramana, who has an interview in quite popular style with a washerman's wife, and receives instruction con-

¹ Concerning a fourth document see the addendum (p 212)

cerning the nature of women. The recovery of Sītā and her children takes place upon the earnest representations of Hanumant.

Among the variations of nomenclature, we may mention that Kumbhakarṇa is replaced, in his first occurrence, by Amalakarṇa, or Utpalakarṇa(?), Kaikaśī by Mekesina or Megasina or Mesina, Vibhīṣaṇa by Biriśana or Birinaśa. Umā is Umade or Upade, Hanumant's companions are Pagśu and Śintu (not Aṅgada and Tāra, as in the Rāmāyaṇa), the two eagles are Padā and Sampadā (not Jaṭāyu and Sampāti, as in the Mahā-Bhārata and Rāmāyana); Mārīca becomes Maruce; the monkeys who make the bridge are Maku and Damsi; and so forth.

Certain incidents have a distinctly popular tone. Besides that already mentioned, we have Rāvaṇa carrying off Sītā along with the plot of ground or estate (sa gži); the monkeys enter the cave holding by each other's tails, Sugrīva in his fight with Bālin has a mirror tied to his tail; Hanumant, when captured by Rāvana's forces, begs to be killed as his father was killed.

We have therefore a highly peculiar $R\bar{a}m\bar{a}yana$ story. Whence and how did it come to the Chinese frontier of Turkestan? No Rāma story known from India exhibits a majority of the above features, but there are certainly some attachments The name of Rāvana's father is given (B) as Ratana, which reminds us of the Ratnaśravas (for Viśravas) of the Jaina $R\bar{a}m\bar{a}yana$ (sarga I, ll. 132 sqq). Rāvana's interview with Viṣṇu has some resemblance to that narrated in the *Uttara-kānḍa* of Vālmīki's poem (c. 24) The story of the washerinan's wife recurs in Tulasidāsa's $R\bar{a}m\bar{a}yana$ (Lava-Kuśa $k\bar{a}nda$ cf. $Bh\bar{a}gavata-Pur\bar{a}na$, ix. 11. 8 sqq) But the largest amount of similarity is found in the first of the two Rāma narratives (IX c 51 and XIII c. 107) contained in the $Kath\bar{a}$ -sarit-sāqara

There are two indications which perhaps point in different directions. The first is the form of the names of Daśarite (Daśaratha), Prahaste, the Yakśa Kore (Kuvera), the nominative in e may be due to the language of Khotan There is also another name which has a rather Central Asian appearance This is Manlyapanta, or Malhyampata, or Malyapada, for Mālyavant It is impossible to suppose that the Tibetan concocted these forms or derived them direct from a Sanskrit original. A Chinese source being excluded on the ground of the general correctness of the other names, and the 'Khotanī' and 'Tokhārī' for similar reasons, an original in one of the indigenous monosyllabic languages of Chinese Turkestan is not out of the question.

¹ This is, perhaps, due to the representations showing her on a sort of platform.

A second possibility is perhaps indicated by the reference to the man Litsabyid Dri-ma-dag-pa, whose wife's utterance led to Sītā's banishment It looks as if we here were dealing with a Licchavi rajaka (washerman). In that case a Nepalese source is suggested The suggestion has no antecedent improbability During the seventh and eighth centuries Tibet was in close relations with Nepal, and the soldiers or Nepalese auxiliaries may easily have carried the story with the armies which overran the eastern part of Chinese Turkestan. In that case we are dealing with a popular form of the Rāma story having a currency in Nepal. This would furnish the direct connection with India that is demanded by the undiluted Indian character of the narrative.

In any case we have in these documents testimony to the early currency of popular Rāma narratives following the general lines and scale of the *Mahā-Bhārata* and departing freely from the classical version of Vālmīki Some such narrative may have found a place in Guṇādhya's *Brhat-kathā*, which in this point may be reflected by the *Kathā-sarit-sāgara*; the extant portion of Budhasvāmin's *Śloka-samgraha* does not seem to give it.

The Tibetan writing in the documents, though it presents some peculiarities, found also in other specimens from Turkestan, is in all essentials identical with that still in use. The language also is what we are accustomed to in inscriptions, edicts, letters, the writings of Mi-laras-pa, and so forth. There are words and phrases not to be traced in dictionaries, and the irregularities in the initial consonants, the abundance of homonyms, and the insufficiency of syntax, which obscure the meaning in all Tibetan writings not guaranteed by versions in other languages, are here also in full operation. But the story is simply told, and the whole might, if it were worth while, be edited and translated, except that the verses would create a difficulty. In the two abstracts given below, the third document C being useful only as supplying a fragmentary part of A, I have inserted most of the verses (literatim as regards all peculiarities of spelling, metre and so forth) with renderings of a quite tentative, and in places even conjectural, character

DOCUMENTS A AND C

1-3 The Yaksiṇī Megasina [Kaikaśī] finds favour with the Muni [Ratnaśravas or Viśravas], who with her begets three sons, Daśagriva, Amalakarna (distinguished infra from Kumbhakarna), and Birinaśa [Vibhīsaṇa] Upon Daśagriva, the eldest, Brahmā confers ten heads, and his strength is in proportion.

- 4-22. (fragmentary). Man-lya-pan-ta (Mālyavant) proposes to (C 1-9) the "sons of gods" [Devaputras] that they should combine and go to Lankā-pura, the realm of their uncle [Vaiśravana]. Seeing the prosperity of Vaiśravana, he weeps. Being asked the cause of his tears, he explains that he remembers his father, the Yakśa Kore [Kuvera], who had been expelled by Vaiśravana and sent down to hell. He implores the assistance of the 'sons of the gods,' who are willing to help, but profess their inability
- 22-30. At the suggestion of Mālyavant the "sons of gods," desiring (C 9-15) to conquer the gods, worship Brahmā with asceticism and so forth during one hundred thousand years. Brahmā, however, knowing their evil object, accords nothing They continue their efforts, and then beg of Brahmā boons, namely:

 (1) that everyone at whom they shoot an arrow shall die;

 (2) a life-charm (g-yun-drun = svastika) to prevent their being killed by others, and (3) sovereignty of the three worlds. Brahmā replies that he is himself the only sovereign of the three worlds and he cannot be reached by an arrow
- 30-33. The sons of the gods try to propitate Mahādeva But he (C 15-19) also, knowing their evil purpose, will not appear, even when Daśagriva cuts off one of his own heads and makes it into a burnt offering
- 33-41 Mahādeva's wife Upade [C Umade = Umā], being very (C 19-23) compassionate, appeals to her lord; and upon his continuing obdurate she herself comes before the 'sons of the gods,' and advises them to give up Mahādeva and propitiate her They declining upon the ground that she is a woman, she grows angry and prophesies their overthrow by a woman
- 41-47 Similarly Mahādeva's minister Prahasta is rebuffed, as being (C23-30) a monkey, and prophesies overthrow by a monkey
- 47-54 After a long time, as Mahādeva still disdains to appear, the (C 30-36) goddess of speech [Sarasvatī] takes the form of a lump on the tip of the tongues of the sons of the gods and so modifies their requests, making them demand (1) sovereignty over the gods, (2) a life-amulet preventing death at the hands of any being who does not first cut off Daśagriva's horse-head, (3) death of any being against whom they hurl the first
 - 54-56. Thus the gods are defeated by the sons of the gods, and in

- (C 36-39) Lankā-pura gods and men are destroyed, and the demons who fill the island make Dasagriva their king.
 - 56-60. The gods who rule the three worlds take council together and arrange that a human being capable of destroying the demons must be born as a daughter of Daśagriva.
 - 60-65. A wife of Daśagriva gives birth to a daughter, who, as the sign-readers declare, will ruin her father and all the demons. So the child is enclosed in a copper vessel and committed to the waters She is found and adopted by Indian peasants, who name her Rol-rāed-ma [Līlāvatī].
 - 65-72 The king of Jambū-dvīpa, by name Daśaratha, being without a son, prays to 500 Rśis dwelling on Gańs-di-se (Kailāśa). They send him a flower, stating that he should give it to his chief queen. he should then have a son Out of compassion the chief queen causes half of the flower to be given to the junior queen. Two sons are born The son of the junior queen, three nights the senior, is named Ramana The chief queen's son is named Lakśana
 - 72-82. Daśaratha, returning wounded from battle on the side of the gods, decides to abdicate and discusses with the chief queen the enthronement of Ramana or Lakśana He is in perplexity through consideration for the chief queen, and is seriously ill; which Ramana perceiving prays that his father may live on condition of his own retirement to a hermitage He departs, and Lakśana is crowned, after which Daśaratha dies
 - 82-89. Lakśana visits Ramana and offers to resign the overlordship [cakravartitva] of the four Dvīpas, to which he is unequal. Ramana declines, whereupon Lakśana takes a pair of Ramana's shoes [chags] and instals them, himself playing the part of minister.
- 89-108. The girl Rol-rñed-ma having grown up and being very beautiful, the peasants send everywhere to seek for her a suitable mate. They find Ramana, whose appearance greatly impresses them, they offer him the girl (ll. 95-105)—

Hair dark and curling to the right; eyes like blue lotuses,
Like the sound of the Veda (brahma-ghosa), of colour (articulation)
   varna) utterly pure,
In herself, beautified by excellent ornaments, auspicious of form;
Brilliant, born of the best of soilless lotuses;
Body in all its members complete;
Like a gem set in a shape of gold,
She brightens with radiance all the regions;
In her body, O king, the fragrance of burning sandal,
In speaking, O lord of the world, while she speaks what is accept-
```

At her mouth the aroma of lotuses falls continually;

Whenever in jesting she smiles, at that time

Her voice is music agreeable to hear,

This jewel of a woman born in the world

Should not be at the disposal of any ordinary person.

Except yourself there is in the world of men

No other lord for her.

able.

To you, whose gracious form has a hundred good points,

Whose body possesses all merits,

We offer at your feet this girl.

All her limb-tendrils fully developed,

Leaves and flowers of fair hues fully expanded,

Made more acceptable as equipped with ornaments, -

This girl made of jewels in quantity be pleased to take.

— and he, giving up his asceticism, marries her under the name Sītā, and becomes king.

108-118. The five hundred ascetics being near the realization of their aims, a minister of the Yakśa Kore, by name Maruce [Mārīca], red-haired, tall, large-eyed, with inverted toes (?), his head adorned with human skulls, all his limbs smeared with blood, creates hindrances. The defeated ascetics write and circulate a statement that whoever shall dispel the obstacle shall have a boon. Ramana accomplishes this. Maruce reappearing, Ramana throws a ring at him and deprives him of his eyes, whereupon he flees The ascetics give Ramana a blessing anyone at whom he aims a shaft shall perish and be reborn as a god.

118-133. Daśagriva's sister Phurpala [Śūrpanakhā — description] appears before Ramana (ll. 123-125).

When joyously on the mountain with its firm, towering frame The light of the warm sun is reflected in Mānasa, full of water, For the cloud-troops gathered away in the sky,

Though they shine with the warm sun, it is no time to appear [rain?].

She returns to her brother in Lankā and suggests the abduction of Sītā.

- 133-163. Daśagriva consults Maruce, who dissuades him from the attempt; when Daśagriva persists, he suggests the ruse of the deer. Ramana being persuaded by Sītā to go after the deer, Maruce interposes a storm between him and his wife and brother. Hearing a call for help, Lakśana at last, after reproaches and insinuations from Sītā on account of his reluctance to leave her, goes after Ramana; and Sītā is left weeping. Daśagriva appears first in the guise of an elephant and then in that of a horse; finally, when Ramana and Lakśana are on the point of arriving, he carries off Sītā along with the plot of ground (sa gži); he fears to lay hands on her person.
- Ramana and Lakśana, returning, are dismayed to find Sītā 163-188 and the plot of ground vanished Worn out by a long search, they fall asleep on the spot Next day they depart in grief, and come to a black stream in a valley. Laksana is about to drink, when Ramana warns him that it is outflow from some stricken creature Advancing into the valley, they find that it flows from the eyes, mouth and nostrils of a huge sleeping ape, who, being questioned, explains that he is Sugriva, younger son of the king of apes His brother Balin is king, and, being the stronger, has maltreated him Questioned as to Sītā, he explains that he himself, being ill, has not seen her In his service are three apes, who have fled at the coming of Ramana and Laksana They are up on the mountain and may be questioned Being reassured, the three huge monkeys descend and relate that early on the previous morning they have seen a ten-headed man, on whose front head, a horse's head, was a woman placed upon a plot of ground, who, crying out that she is Sītā, wife of king Ramana, and imploring any merciful person to rescue her, was carried off. Ramana proposes alliance with Sugriva, offering to make him king, if he will arrange to find Sītā
- On the morrow the two monkeys fight in Ramana's presence without result Ramana says that next day he will be a participant and not merely a spectator. Bālin's wife gives her husband good advice Further fighting, in which a mirror tied to Sugrīva's tail plays a part. Bālin is slain by Ramana's arrow and becomes a god.
- 208-211. Ramana arranges a meeting with Sugrīva, and, when Sugrīva's army fails to appear at the appointed spot, after three years

he sends him a verse message inscribed on an arrow, warning him of Bālın's fate (ll. 209-210) —

dam la gnas byas mgrin bzans po/ <u>H</u>bah li lam du ma hgro śig// gan du <u>H</u>bah li bsad pa hi lam// de ni legs pa ma yin no/

Abiding by his compact, let Sugrīva Go not upon Bālin's path.
Where Bālin met his death,
That path is not a good one;

whereupon Sugrīva, alarmed, comes with his army.

211-236. Sugrīva nominates three powerful monkeys, Pagśu, Śintu and Hanumanta, to go in search of Sītā, and Ramana furnishes them with a message and his signet-ring. After a long and vain search, they are thirsty They happen to see two ducks alighting in a hole in a rock, which they regard as a sign of water Following the ducks and one holding the other's tail, they enter the hole, where they discover a fine apartment Asking whose it is, they are told that it belongs to a daughter of Srī Devī, by name Gtsug-rgyal-sgeg-mo [Māyā, daughter of Meru?] They show respect to her and tell her where they are going. She bids them wink their Taken in an unknown direction, they find themselves on the shore; and, as they gaze at one another, a great black mountain appears. They notice that it is shaking; and, coming near, they see a black bird with its feathers injured. Upon their enquiring the bird explains that his father was Agajaya, king of eagles his own name is Pada, that of his younger brother being Sampada disputing about the sovereignty, they made a compact that whichever should fly away quickest from the summit of Mount Meru should have the sovereignty Being the more speedy, he looked behind, and he saw his brother's feathers burned by the sun. Turning back, he went to the assistance of his brother and had his own feathers singed. Thus maimed he could not obtain the sovereignty, and so remains on that spot. To the monkey's inquiry concerning Sītā, he replies that at the time when she was carried off, his father, being a relative of Ramana, shot into the sky two of his feathers, which fell to earth. Being struck by the feathers, the demon was tired and set down

Sītā. He then threw a red iron ball, which Padā's father took for food; having eaten it, his heart was burnt and he died. The demon then made off with Sītā.

236-254. The monkeys take counsel as to proceeding to Lanka, which is in the middle of the sea. Sintu avers his own inability to make the passage, while Paśu (sic) thinks that he can go, but being ill, could not return Hanumanta, having waited to be asked, professes readiness and leaps to Lanka. He finds Sītā guarded by an army in a doorless fort with nine circular walls He approaches very quietly and presents the latter and the signet-ring Sītā is overjoyed and reads the letter (ll. 245-254)—

Men tog hdab rgyas lte bu hi sku mdog la/ sñun kyi than bas gduns par ma gyur tam/ stag ris bun ba lte bu hi hkhro ldin la// thugs kyi grwa nas/bren bren myi brtse ham/ bdag ni bslu ba hi ri dags de bkum slar mchisna// sa gži behasu bzan mo myi bžugs, nas// mye nan yıd la gduns pa hi lus mdog nı/ lo hdab lhags pas gduns pa hi hjon śin bzin// mdzes sdug sel mdog hdra ba hi than grogs de myed nas// nur pa bzin du phyogs htshams kun du mol// chab gan g-yun drun sems kyi thag berins pas/ lo zla man po hi dus kyan yens la hdahs/ da ni gans kyi sen ge rtsal phyun mthus gthugs pas// sdo ba hi dara gžan ran ñid hkham ste hchi/ lhun po ri rtser rin chen byin sar na/ skar tshogs mkhah la rgyu ba hi hod dan bral// de bas bdag la dgons tdan brtse ba hi nan ñid kyi/ dkyıl yans raya mtsho hi dkyıl du gyur ltar yan// phu chab lte bu hi yid kyi dbah rgal dag// raya bskyed daons pa hi lhun ni tshim par mdzod//

Upon that body like a flower with expanded petals
Has there been no blighting by the drought of sickness?
Has anger, alighting like a bee, with its axe (?)
Not cut away little by little from the angle of your mind?
When I came back from slaying the illusory deer,
And the fair one along with the plot of land was not there,
My body's hue was blighted by grief at heart,
Like a tree with its leaf-petals blighted by frost

As in the absence of its loved, crystal-hued mate
A duck wanders about in all directions,
Postponing the thought of Mānasa full of water,
Many years and months have passed in restlessness.
Now that I am equipped with strength beyond the might of an ice-lion

Other venturesome enemies, failing of themselves, perish.

When the splendid jewel rises on the peak of Meru,
The stars moving in the heavens lose their light.

Therefore your affectionate nature in thought of me
May expand widely its horizon, as though it were the horizon of the
sea.

Crossing the waves (agitation) of mind, as of a mountain stream, Let the mass of your expanding thoughts be satisfied,

stating Ramana's grief and his intentions.

254-284. Sītā impresses upon Hanumanta the necessity of prudence; but he does not listen He goes into Rāvaņa's park and inverts all the trees and so forth This is reported to Ravana, who commands many of his servants to capture Hanumanta. who however kills them all Daśagriva then sends his eldest son with a net made of sunlight Hanumanta will not approach the net, but, when the demon prays to the Siddha gods, these order Hanumanta to enter the net When the demons propose to kill him, Hanumanta prays them to kill him as his father was killed, namely by tying to his tail cloths dipped in oil, and setting them on fire. Hanumanta leaps on the forts and houses of the demons, sets them on fire, kills many of the demons themselves, and then, removing the cloths from his tail, makes off and seeks Sītā. He says he is departing and begs for a message She eventually complies, giving him a jewel to convey and Hanumanta brings the letter to Ramana, who is overloved and reads it (ll. 276–284)

"In that frame, like a lamp finely adorned
With ornaments of many attractive virtues,
The chill of illness does not range, I trust" this
Respectfully spoken, agreeable answer
And affectionately meditated letter know to be my heart's meaning

Recognizing the supple, finely-turned (?) seal,

In the presence of the dear . . . writing (?),

It was as if I dreamed of meeting my old parents long passed away.

My memory's strength, uncontrollably,

As if shot forth from my mind, is with my lord alone,

And I have no strength to remember anything more

For that with compassionate heart you have not in this long time given me up,

When there is a numerous court subject to your authority, But upon one like me, lord of men, who, although not lowly, Am of the middle rank of the retinue dependent upon you, You deign to bestow thought accept my thanks.

- The army of monkeys and men having rejoined, all start for Lankā, but a great ocean bars the way. Ramana commands the monkeys Maku and Damsi [Nala] to make a bridge. They set to work, tearing up mountains and trees As Damsi takes the mountains on his knees and builds the bridge, while Maku stands, they quarrel about their respective strength, whereupon Ramana reproves them (a verse, ll. 291-293). The bridge being finished, the army crosses.
- 293-299. They having arrived at Lankā-pura, the time for giving battle having been fixed, Amalakarna, who is wise, gives good advice to his brother Daśagriva not heeding, Amalakarna goes to join Ramana, whose suspicions he dispels by quoting a verse (ll. 291-293). Ramana being placated, Amalakarna becomes his adviser.

- 299-303. A demon named Rum-rna (Kumbhakarṇa) had by austerities and through the intervention of Sarasvatī in the manner stated above obtained the boon of perpetual sleep. Daśagriva and the others succeed by pouring molten metal [?] into his ears, making thousands of elephants smite his body, beating great drums near him, in awakening him. In response to Daśagriva's appeals he devours the army of men and monkeys. but Ramana he is not able to devour. Hanumanta, whom he seeks to devour, is sometimes at his ear, sometimes in front of him, sometimes in his eye so he gives up, and the two separate. At last Kumbhakarṇa is exhausted and falls asleep again.
- 303-309. Amalakarna states that on mount Kailāśa there grows a herb *Hbri-ta* (*Amrta*), which could heal the whole army: Hanumanta is sent to fetch it. Not being able to find it, he pulls up Kailāśa, gathers the *Hbri-ta*, and replaces the mountain. With the *Hbri-ta* the whole army of men and monkeys is healed.
- 309-320. A time for battle is again fixed. Daśagriva with his first arrow kills his younger brother Birinaśa, who is flying Ramana reflecting that, if he himself went forward and died, Sītā, even if saved, would have no companion, Lakśana is placed in the van. He being struck by many arrows, Ramana goes forward himself. Daśagriva, concealing himself by magic, kills with his arrows many men and monkeys. Ramana challenges him to show as much as a toe; and, when he does so, aims an arrow at where his horse's head should be and cuts it clean away it then floats about above the army of men and monkeys Ramana says 'do you not know how to die: must you go on fighting?'; and, rising above his own army, kills most of the demons over the great body.
- 320-323. The demon army having been totally destroyed, Ramana breaks with his arrows the nine walls of the fort in which Sītā is imprisoned and liberates her He then with medicine restores Lakśana to consciousness
- 323-326. Sugrīva with his army of monkeys departs to his own kingdom. Ramana goes to Jambū-dvīpa, where a great feast is held. Sītā bears a son, to whom is given the name Lava
- 326-338. Hanumanta is appointed Minister to Sugrīva. The two invite Ramana with his brother and Sītā, and make a great feast. Hanumanta and Ramana are special friends, and keep

up a correspondence. Sugrīva having died, the monkeys offer the sovereignty to Hanumanta, who refuses (in verse, ll. 331-333), but upon earnest supplication (in verse, ll. 334-337) consents

338-350. A tiff between Ramana and Hanumanta. The latter apologizes (ll. 343-348) —

khri lan nons ses gnon zin hgyod //

"A myriad times I am known to have offended," that I regret with shame.

To elevate an offending person is waste of labour

Forgetful of kindness, he is like tree on a mountain.

In elevating the low there is no profit

Though by you, great lord, I am not regarded as offender

Nor despised as puffed up,

A fish flooded with water in the spring time,

Forgetting . . ., becomes agitated,

Goose and duck, which have their home in the lake,

If they leap out on to the bank, are not in place.

To one like me, a monkey of low race,

Kindness from the high is, except from you, rare,

and they become friends as before

350-365. A vassal of Ramana, by name Benbala, revolts, and Ramana leads an army against him, depositing the queen mother and her son meanwhile with 500 ascetics on Mount Malaya [ri ma la ya error for Himālaya?]. He fails to return in time, and the queen, becoming anxious, wanders in search of him, depositing the child with the hermits. The child, however, goes after his mother, and the hermits do not know what has become of him. Has Lava fallen into the water or

been carried by friends? Considering Ramana's love for Lava and his consequent grief, they decide to create a substitute in the Kuśa grass. this they do, and by their power the created child receives consciousness and is in form indistinguishable from the real son. Sītā upon her return finds with the hermits a boy like Lava and asks his name. They reply 'it is Kuśa,' and Kuśa becomes his name. Sītā is content to have the two similar sons.

365-410. Ramana returns, after reducing Benbala to subjection. On one occasion, while wandering about, he sees a Litsa-byed, Drima-dag-pa (Licchavi Malapūta? Rajaka?), and his wife quarrelling. The former says 'This harlot is unlike other women. Where is a moon-image like you, who, not content with her husband, sleeps with other men?' She replies, 'what do you know of other women? For instance, Sītā devī, the excellent wife of king Ramana For 100,000 years she was with Daśagriva, king of the demons But see, she was rescued all the same and is a dear wife. Do you know the nature of all women?' Ramana is troubled and determines to find out from the woman how the nature of woman differs from that of men He arranges a secret meeting with the woman, and asks her the question. She explains (ll 384-389)—

rıms nad tsha bas hdugs pahı myı//
rgyun du gans chab dran ba bɔn//

As one tortured by fever's heat Constantly remembers icy streams, A woman, ever agitated with desire, Constantly remembers a handsome man. So long as she is seen by others and heard, No blame attaches to her:

When she has come to a lonely place,

Unrestrained by anything,

She effects even with outsiders the object of her desire.

Persons again, being unabashed,

Though the people speak unfavourably of them,

When blamed are not shame-faced,

But are all the more proud — see you not?

The king believes her, and tells Sītā that she may go where she pleases (ll. 393-396). She departs with her sons to a hermitage. Ramana remains in his palace.

410-439. Ramana invites the monkeys Hanumanta is surprized to have no evidence of the Queen, and Ramana tells him the story. Hanumanta by showing in what circumstances he found Sītā demonstrates the absurdity of the suspicions Ramana is convinced and sends for Sītā and her children They give a great feast in honour of Hanumanta, who returns to his own realm Ramana and Sītā and the children live happily in their palace

DOCUMENT B

- Ll. 1-20 Vaiśravana, expelling the Yakśa Kore (Kuvera), is made by Brahmā king of the Three Worlds and the Four *Dvīpas*. [The gods] pray to the Devarṣi and Śrī Devī, who agree to beget a son without bodily contact and each gazing steadily in a mirror ultimately they have a son, who is called Vaiśravana He expells the demons from Laṅkā-pura, sending them down to hell, and fills the land with men and gods
- 20-52. After many generations of the demons the Yakśa Kore has a son Mal-hya-pa-ta (Mālyavant), who is found in a quilt. The people of the country ask who are his father, mother and relatives, and he inquires of a Brahman Ratana, who informs him that his father is the great and powerful Yakśa Kore, who has been deposed by Vaiśravaṇa Desirous of retribution, but powerless, he decides to practice austerities in the garden (Śin-rtaḥi-tshal) of the Vaijayantī palace of Brahmā's son Śvapasina [sic, for Vaiśravaṇa?] He lauds the Devarṣi, as ruler of the Worlds, son of Brahmā and so forth (verse, ll. 31-33), and the Devarṣi inquires the object of his austerities. After three days he replies that to the kind Rṣi,

who warms the world like a sun, he wishes to give his daugh ter Mekesina (ll. 37-38) —

```
hjig rten dag la gñi ltar dro ba dkon//
bdag la byams par khyod las gżan myi bżugs//
drin bzo lan du bdag gyi bu mo hdi//
Me ke si na hbul na bżes su gsol//
```

In the worlds a warmth like the sun is rare. For affection to me there is none other than you. In return for kindness this daughter of mine, Mekesina, I offer take her, I pray.

The Rsi is displeased at an idea so inconsistent with his vows, but at the same time loth to violate the maxim of accepting what is offered in kindness: so he says nothing. Mālyavant presses him (ll. 42-44) —

```
kun la bde mchog lon spyod ni//

```

Everywhere the enjoyment of happiness (?)

Depends upon a loved companion as lady of the house (?),

As companion to support your wonderful, brilliant greatness, this lady

Is a match for you — further praise is unnecessary (?). In rank inferior, quick to see what is opportune; With a smiling mind, wise in the ways of playfulness; Of great fascination, earnest in doing what is to be done; — In this lady are these rarities take her I pray;

and the Rsi at last consents. To him and Mekesina are born three sons, Dasagriva, Utpa[la]karna (?) and Birisana. To the eldest the grandfather Brahmā gives ten heads and corresponding strength and so forth.

52-63. Mal-hyan-pan-ta proposes to the 'sons of the gods' to go to Lankā, the country of their uncle, and they consent. Mal-hyan-pan-ta advises them to obtain a boon from the gods;

but the gods, discerning their evil purpose, do not grant it. However, a teacher whom they had first worshipped and who had been made by Mahādeva goddess of speech asks for their success; and under her influence the lord of the gods gives them the rule over the gods. From that time they quell the gods, and, defeating the gods and men of Lankā-pura, fill the place with demons. They make Daśagriva king with a court of gods and Nāgas he enjoys himself, and the king [Daśagriva? Vaiśravana?] goes where he pleases.

- 63-77. Daśagriva's Ministers suggest to him that to dominate others is nothing there is the great Viṣnu, lord of the world. To Daśagriva's inquiry as to where Viṣnu is they reply that he is in the Ocean of Milk in the north Daśagriva goes in his chariot, and his coming is reported to Viṣnu, who says "Let him come in." Daśagriva says he has come to fight and why then should he come in? Viṣnu says 'We two, being superior to others, ought not to fight at once like dogs Today come in and sleep tomorrow we will fight' Daśagriva enters; but as Viṣnu does not rise to greet him, he becomes enraged and demands to fight. Viṣnu says 'Nothing else is necessary; take one of my earrings' Failing to effect this, Daśagriva is dejected, and, having bowed before Viṣṇu's feet, goes back to Lankā-pura.
- The gods, assembled in heaven, take counsel Indra inquires 77-89 of H₁1g-rten-gy₁-phyva (the fortune[-teller] of the world), who states that Daśagriva, king of Lanka, has enslaved the gods and is doing mischief He asks who first empowered him and is told that it was Mahādeva The gods go to Mahadeva, who upon inquiry by Brhaspati says, 'I did not empower him I do not know that Dasagriva is so. If he is harming the world, well, I am occupied with a vow appeal to Visnu' They go to Visnu, who says, 'At present there is a king of Jambū-dvīpa, by name Daśarite [Daśaratha] He having no son, I will appear as his son and quell the demons.' Visnu appears as Daśaratha's son Ramana, and Visnu's son as the younger brother Laksana. The gods also are born variously A woman capable of destroying the state of the demons is conceived by a wife of Dasagriva.
- 89-92. The child of Daśagrıva's wife is born, sent away, found by husbandmen and named Līlāvatī (as in A).

93-99. Daśaratha pays respect to 500 Rṣis living on Kailāśa and begs a son. They send him a flower, bidding him give it to his queen. The chief queen gives half of it to the junior queen, and two sons are born, the son of the junior queen being the elder by three days.

ADDENDUM

A fourth document (D = Fr. 63 = Vol. 56, fol. 11) has come to light. Similarity in paper (though that of D seems thicker), script (recto ll. 51 of Tibetan, verso ll. 31 of Chinese), size (Tibetan c. 25 cm., Chinese c. 20 5 cm.) and distribution of lines, suggests that this is in reality a (prior) part of A The subject matter corresponds to ll 1-47 of B, preceded by a laudatory description of the country ruled by the Yakśa Kore, which would be Ceylon The agreement with B is not literal, and in the proper names, as rendered into Tibetan, there is some divergence thus for Sin-rtahi-tshal it gives Sgyed (skyed) motshal, for Śvapasina Biśurasena, and for mekesina megasina — F.W T.

OXFORD UNIVERSITY.

HOW TO LIVE HAPPILY ON NOTHING A YEAR

Translated from the twelfth book of the Mahābhārata

By ARTHUR WILLIAM RYDER

MAGINE that what is
Does not exist at all;
Then will you not be grieved,
However low you fall.

Your deeds of yesterday
And those that went before
Are past and gone; for them
You need not sorrow more.

What was, no longer is,
What was not, will not be.
The past need bring regret
To none from blindness free.

Where is your father now?

Where may his father be?
You do not see their life,

Your life they do not see.

And you, O King, and I.
With every foe and friend,
Will surely cease to be,
Since all things have an end.

The men of twenty years,
Or thirty years, or more,
Will all be dead when once
A hundred years are o'er.

And even should riches cling
To you, do not repine,
But seek for comfort in
The thought, "They are not mine."

If man leave not his wealth,
Then wealth the man will leave.
Since this is surely so,
Why should the prudent grieve?

And poor men live to-day
Who calm a nation's fears
By wisdom and by strength,
Your betters or your peers.

They do not grieve like you;
Then cease to grieve at length,
Surpass or equal them
In wisdom and in strength.

Consider what the past
And what the future teach,
Not grieving at events,
Indifferent to each.

Desire the things you may,
Not those you may not gain;
Enjoy the gifts of fate —
Those lost deserve no pain.

And he is surely fool
Who curses God and weeps
For what he had, and lost—
Ingrate for what he keeps.

And be not troubled if
Men show unworthiness
Of wealth they have; for thus
Your sorrows grow no less.

Endure though riches smile
On all but you alone;
For men of sense enjoy
The wealth that others own.

Yea, brave and righteous men In willing sacrifice Abandon wealth and home, Knowing salvation's price. Even kings a kingdom leave
And count their loss a gain:
In pain's extremity
They seek the end of pain.

From such men learn to find In penury, relief: Grief often comes as joy, Joy wears the form of grief.

Nay, who would set his heart On gold that ends as dross, On life that ends as death, On love that ends as loss?

The pole-tusked elephant
Is like the sage, for he
Lives lonely in the woods,
Gladly, and frugally.

University of California.

HINDU-ARABIC NUMERALS

By WALTER EUGENE CLARK

THE numerals which we call Arabic are so called, not because they were invented by the Arabs, but because the Arabs transmitted them to Europe So much is certain Arabic literary tradition, as generally interpreted, declares that the nine numerals with zero and place value were invented by the Indians, and that they were adopted by the Arabs during the last quarter of the eighth century A.D. In conformity with this Arabic tradition these numerals were generally called Hindu all through the mediaeval and Renaissance periods in Europe They were commonly called Arabic only from the sixteenth century. The general opinion of mathematicians, Sanskritists, and Arabic scholars, based on this Arabic tradition and on the Indian evidence itself, has been that these numerals with zero and place value are to be traced ultimately to India

During the past few years Kaye has written a series of articles 1 in which he disputes this general opinion with greater and greater vehemence and certainty He claims that he is the first one to apply a strictly scientific method to this particular problem. His method consists in denying all validity to Indian literary tradition and to Indian manuscripts previous to the date at which the manuscripts themselves were written The only admissible evidence is that of inscrip-On this basis he tries to prove that the numerical tions and coins symbols with zero and place value were unknown in India until the end of the ninth century AD, and that Indians and Arabs alike must have taken them from some third source Having reached this fundamental position he makes use of Indian literary tradition only in so far as it does not contradict his scientific conclusion. All passages which are definitely in contradiction with this conclusion are later interpolations. The Arabic literary evidence is handled in the same way All passages which suggest an Indian origin or praise Indian accomplishment in any branch of knowledge are legendary Such passages as criticize the Indians and belittle their knowledge or methods

¹ Journal of the Asiatic Society of Bengal (hereafter cited as JASB), 1907, p. 474, 1908, p. 111, 1908, p. 293, 1911, p. 801, 1912, p. 349, Bibliotheca Mathematica, x, 289, Journal of the Royal Asiatic Society (hereafter cited as JRAS), 1910, p. 749, Indian Mathematics, Calcutta, 1915, Scientia, xxiv (1918), 53, and xxv (1919), 1; Isis, 1919, p. 326.

are accepted as just and reasonable. On the other hand, it is very noteworthy that Kaye fails entirely to apply this same hypercritical method to Greek, Latin, and Chinese literary evidence. This is accepted as valid without criticism and without the support of inscriptions.

The whole problem of the Hindu-Arabic numerals was admirably summed up in 1911 in the little book of Smith and Karpinski, *The Hindu-Arabic Numerals* An article by Ruska has shown pretty conclusively the superficial nature of Kaye's treatment of the Arabic evidence, and his conclusion (JASB, 1907, p. 498) that there is absolutely nothing Indian in al-Hwarazini

After his elimination of the Indians as inventors of the numerical symbols with zero and place value. Kave suggests a Greek origin for these and for most or all of Indian mathematics, but his reasons for this conclusion are expressed with great vagueness The most tangible passage is the following 2 "It was during this period also that Damascius, Simplicius (mathematicians of some repute) and others of the schools of Athens, having heard that Plato's ideal form of government was actually realised under Chosroes I of Persia, emigrated thither (circa AD. 532) They were naturally disappointed, but the effect of their visit may have been far greater than historical records show." There is no citation of authority for this statement, no critical analysis of its historical value, and no reference to inscriptional evidence, as is demanded in the treatment of Indian literary evidence The only good authority seems to be Agathias (11, 30-31), a sixth-century Byzantine author, who wrote a history of his own times The passage states that these philosophers were so disgusted with the ideas and practices of the barbarians that they very soon returned to Greece. There is no mention of numerals or mathematics, no suggestion that the brief visit of these Greek philosophers had any appreciable effect on Persian mathematics or Persian thought

Carra de Vaux,³ independently of Kaye, arrived at similar conclusions, but expressed more definitely and emphatically and with additions which were welcomed with approval by Kaye in a later article.⁴ The new theory of the origin of the digits is the following:

¹ "Zur altesten arabischen Algebra und Rechenkunst," in Sitzungsberichte der Heidelberger Akademie, 1917

² Indian Mathematics, pp 15-16, 45, Scientia, xxiv, 54

³ Scientia, xxi, 273

^{&#}x27; Scientia, xxiv, 54. Kaye had anticipated the first two conclusions of Carra de Vaux and vaguely suggested the third Cf JASB, 1907, p 489, 1911, p 801

Firstly, the evidence for the Indian origin of the numerals with place value is entirely legendary and this legend is Persian. Carra de Vaux even goes so far as to say that the fables of Bidpai have nothing to do with India, but were developed in Persia by the Neo-Pythagoreans. For this amazing conclusion there is just the bare statement, without the citation of any evidence Secondly, that the word hindi or hind is a mistake for handasī, or is a parallel derivative from the same root, and means "measure, arithmetic, geometry," etc It refers, therefore, not to Indian signs but to arithmetical signs in general. (Thirdly, that the numerals with place value were invented by the Neo-Platonists or the Neo-Pythagoreans, were taken by them to Persia, revealed to the Persians, and passed on by the Persians to the Indians and Arabs, and by the Arabs to Europe.) These conclusions are based entirely on vague generalizations. No effort is made to prove that the Neo-Platonists or Neo-Pythagoreans knew numerals with place value, and not the slightest evidence is produced to show that these numerals were known in Persia before the eighth century Greek or Latin text known to me which throws any light on the activities of the Neo-Platonists in Persia is the Solutiones eorum de quibus dubitavit Chosroes Persarum Rex of Priscianus Lydus,2 one of the Neo-Platonists who went to Persia in the reign of Chosroes I This work deals at considerable length with questions of metaphysics and of natural science, chiefly on the basis of Aristotle and his school, but it does not contain the slightest suggestion of mathematics or of numerals with place value

So far as I know, the only early evidence that Neo-Platonists or Neo-Pythagoreans had any knowledge of numerals with place value

¹ Granted that the word handasī has often been mistranslated as if it were hindī, still such early mediaeval works as the fourteenth-century Ψηφοφορία κατ' Ἰνδούς of Planudes, the Liber Abaci of Leonard of Pisa (1202 A D), the Algoritmi de numero Indorum of the twelfth century (a translation of the eight-century work of al-Hwarazmi), and many of the other early European works on algorismus, seem to prove clearly that the Arabs themselves regarded India as the place of origin of the digits, and understood the word hindī to mean Indian. The attempt to explain away the word hindī seems to me to be futile. The further contention that in Europe in the mediaeval period the word India was a term of very general meaning and does not necessarily refer to India itself might be valid for independent works in Greek and Latin in Europe, but here we are dealing with works which are translations from the Arabic, or based directly on Arabic works and traditions, and Arabic hindī could not have had the same vague meaning to the Arabs that the word India had in Europe. See also Ruska, loc. ct., p. 114

² Preserved only in this Latin version, and published by Bywater in the Supplementum Aristotelicum

is contained in a passage of Boethius (about A D. 500). In the Geometry of this author are given nine numerical symbols which are called apices, and the statement is made that they were used by the Pythagoreans for calculation on the abacus, which they had invented and named mensa Pythagorea in honor of Pythagoras. A great controversy has been waged over the authenticity of this passage. It is still The description of these numerals does not occur in the Arithmetic of Boethius, where it would be in place, but in the Geometry, in the midst of a discussion of angles, the subject is changed abruptly to a discussion of different classes of numbers, and then is given an account of the abacus and a representation of the nine numerical symbols used by the Neo-Pythagoreans in connection with it None of the early successors of Boethius, who used his work and quote him, make any mention of this important passage (None of the manuscripts of the Geometry are older than the eleventh century and there is no other trace of numerals with place value in Europe in the earlier Greek and Latin literature, or in later literature until a Spanish manuscript of A.D 976, in which they are definitely called Indian 1) If the same method which is employed by Kaye when dealing with Indian literary evidence is applied to this doubtful passage of Boethius, we must admit that it cannot be used as certain evidence for numerals with place value earlier than the eleventh century, the actual date of the manuscripts themselves After the hypercritical method used in demolishing the theory of the Indian origin of the digits, the vague and slipshod method employed in building up a positive theory of Greek origin is most unfair and biassed

There is a curious passage quoted by Nau² from the well-known Syrian writer Severus Sebokt The date is A.D 662. Sebokt speaks of "the subtle discoveries of the Hindus in astronomy, discoveries which are more ingenious than those of the Babylonians, and their clever method of calculation, their computation which surpasses words, I mean that which is made with nine signs If those who think that they have reached the acme of science just because they are Greek had known these things, they would perhaps have been convinced, although late, that there are others who know something." Kaye tosses this passage aside ³ as obviously worthless, with the words,

¹ Hill, Archaeologia, lxii, 151, 170 Another Spanish manuscript of a D 992 gives the same characters

² Journal Assatique (hereafter cited as JA) (1910), 11, 225-227, Revue de l'Orient Chrétien, 1910, p 250

³ Indian Mathematics, p 31

"but his authority makes such erroneous statements about 'Indian' astronomy that we have no faith in what he says about other 'Indian' matters." He does not point out the obviously erroneous statements. Surely the oldest known mention of Indian numerals deserves a more critical treatment than this. More certain reasons than Kaye's personal prejudices and vague generalizations are necessary if the passage is to be cast aside as legendary or a later forgery. It may or may not be valid, but in the present state of our knowledge it certainly has as much value for the subject under discussion as the passages of Agathias and Boethius ¹

Not without possible value is a passage in the Chronicum Paschale: ² Έν τοις χρόνοις της πυργοποιίας ἐκ τοῦ γένους τοῦ ᾿Αρφαξὰδ ἀνήρ τις Ἰνδὸς ἀνεφάνη σοφὸς ἀστρονόμος, ὁνόματι ᾿Ανδουβάριος, ὅς καὶ συνεγράψατο πρῶτος Ἰνδοις ἀστρονομίαν Whether or not this refers to Aryabhaṭa, as has been suggested, is very uncertain ³ The chronicle ends with the year A D 629, but is based largely on earlier sources. The date for which the statement is valid is uncertain, but whatever its date may be, the passage may have historical value as a partial corroboration of Sebokt and as proving at a comparatively early date in Europe the knowledge that the Indians had cultivated astronomy

There is the same looseness in Kaye's treatment of Chinese mathematics which, according to him, had much influence on early Indian mathematics. He expresses hmself as follows 4 "Mr Yoshio Mikami states that there is no evidence of Indian influence on Chinese mathematics. On the other hand, he says, 'the discoveries made in China may have touched the eyes of Hindoo scholars'". This statement is made on page 23 of Mikami's book, The Development of Mathematics in China and Japan, but it is directly preceded by the words. "It is certain that the Indian learning exceedingly influenced Chinese thought but at the same time." Further, in a chapter entitled On the Indian Influence (pp. 56-61), Mikami repeatedly suggests the possibility of Indian influence on Chinese mathematics and astronomy. "Things Indian exercised supremacy in art and literature, in philosophy, in the mode of life and the thoughts of the inhabitants, in every-

¹ For an account of Sebokt and his works, see Baumstark, Geschichte der syrischen Literatur, and Ruska, loc cit, p 46 Sebokt is not "a certain Sebokt," but one of the most famous and trustworthy of Syriac authors

⁴ Indian Mathematics, p 41

thing. It is even said, astronomy and calendrical arts had also felt their influence. How then could arithmetic remain unaffected? No doubt the Chinese studied the arithmetical works of the Hindoos." . . . "Will it be too rash for us to assume that the problem of the circle-measurement had been transplanted from Indian soil to the fertile land of the Middle Empire?" . . "But all this, it must be confessed, remains mere conjecture, there is nothing positive that serves as an evidence of any actual influence upon the Chinese mathe-In astronomy some of the Hindoo theories were studied, and there are still extant some part of them in translations and quotations But neither a single problem nor a single rule for the solution in the domain of mathematics now remains that is definitely known as of Indian origin The fact, however, that the Indian mathematical works had been studied in China can by no means be denied" Then he sums up by saying, "The possibility of the Chinese mathematics having been influenced by the science of India may well be conjectured from the meagre account here given As for exact information, we have none." In the next chapter he shows that from about AD 618 on there were often Indian astronomers on the Astronomical Board in China, and that they composed calendars which were in general use. He also gives in Chinese the names of six Indian works on mathematics and astronomy which were translated from Sanskrit into Chinese at an early date Mikami's book is praiseworthy from the purely descriptive point of view, but in the matter of chronology he merely follows orthodox Chinese literary tradition and Kaye blindly follows him 1 The Chou Per is regarded as valid for the twelfth century B C., the Arithmetic in Nine Sections for the second century B.C., with a revision in the third century Ap., the Arithmetical Classic of Sun Tsu for the first century AD., and the Sea Island Arithmetical Classic for the third century AD. It is very doubtful whether these texts in their present form are valid for the dates assigned to them by tradition. They may have been much reworked. For instance, Mikami gives a long and excellent analysis of the Arithmetic in Nine Sections, but remarks that "Hayashi has given a summary of the same text which is utterly different from what I know of the book." Nothing definite is to be gained from the jumbled conclusions of Mikami; but Kaye's quotation of him is so unfair and misleading that one becomes skeptical of the rest of his "scientific" method.

The possibility, and even the certainty, of manuscript interpolation has always been recognized by philologists and has to be guarded

¹ Indian Mathematics, pp 38-40.

against carefully; but there is no reason for assuming that Chinese and European manuscript traditions are any more exempt from interpolation than are the Indian and Arabic manuscript traditions. By his method Kaye does undoubtedly eliminate some doubtful or worthless material which has been given undue weight by earlier scholars, but at the same time he undoubtedly eliminates much that is valuable and correct.

In the earliest Indian inscriptions we find numerical symbols without zero and without place value That is, there are separate signs for the numbers from one to nine, for ten and multiples of ten, for one hundred and multiples of a hundred, for one thousand and multiples of a thousand. Such numerical symbols begin in the third century B.C and are used exclusively in inscriptions down to about A D 600 (or, as Kave insists, down to the end of the ninth century) After that time this method is used with decreasing frequency, along with other methods which constantly gain in favor, down to the twelfth century or At some time, and this exact date is the chief matter under dispute, a new system came into use In this later system there were only ten symbols, those for one to nine and zero These were used with place value so that they sufficed for the expression of all possible numbers The earliest supposed occurrence of any of the first nine symbols is in an inscription of A D 595, and between then and the end of the ninth century we have about twenty inscriptions in which they are used: Inscriptions containing the old symbols without place value are much more frequent From the end of the ninth century the symbols with place value are used with increasing frequency. By the twelfth century the old symbols without place value have almost entirely disappeared . The symbol for zero occurs first with certainty in the ninth or tenth century 1. Of these twenty inscriptions some are regarded by Indian epigraphists as later forgeries, some as doubtful, and some as Most of them are land grants inscribed on copper plates. Grants of land or villages were often made by a king to some man or group of men for special service rendered, and such land was exempt from taxation. Consequently there was great temptation to forgery of such grants, especially after periods of political disturbance; and there are many undoubted cases of such forgery, a large proportion made in the eleventh century A D. in southern India. These can sometimes be detected with considerable certainty palaeographically by the unsuccessful imitation of the older forms of the letters used in the same

¹ The occurrence in the eighth century referred to by Bayley (JRAS, 1883, p. 27) cannot be verified. No argument can be based on it

part of the country, by the inferiority of execution, or by some inaccuracy in the genealogy or account of the older king as gained from a study of older and genuine inscriptions of the particular king named. Unfortunately our inscriptional material is fragmentary and has many gaps Since the discovery of undoubted forgeries epigraphists have been very skeptical and critical, and inclined to mark as doubtful any grant about which there is the slightest suspicion. Kaye takes advantage of Fleet's article in the Indian Antiquary for 1901 in which about sixty grants are critically discussed and listed as spurious to declare that all of these early grants which contain numerical symbols with place value are later forgeries, or, at least, even if the text of the grant itself seems to be genuine, that the numerical symbols with place value have been added after the end of the ninth century. He makes one possible exception for an inscription of A.D. 813, but thinks that this too must be treated provisionally as a forgery 1 After the ninth century the material is so ample that the forgery of all the grants can not possibly be maintained The use of numerals with place value in inscriptions soon becomes the rule, not the exception The matter of these early grants is one to be decided only by skilled epigraphists as I shall not discuss it here, except to remark the material increases that it is by no means certain that all the inscriptions in question are forgeries At the most all that can be said is that some of them are forgeries, that some are doubtful, and that the question cannot be decided definitely on the basis of the present evidence The problem is an open one

We have considerable fragments of a birch-bark manuscript called the Bakhshali manuscript ² discovered some thirty years ago in the extreme northwestern part of India. These are part of a large work on mathematics giving rules and problems and complete solutions in nine numerical symbols with zero and place value. It bears no date Hoernle tentatively dated the composition of the work between a D 330 and 400, and the writing of the manuscript between the seventh and tenth centuries. Thibaut has expressed the opinion that the manuscript was written between a D 700 and 900, while the work itself may be older. Kaye places the work and the manuscript in the twelfth century or later. ³ His arguments are not conclusive. The date of

¹ JASB, 1907, p 481, Scientia, xxiv, 55, JASB, 1910, p 756

² Hoernle, Indian Antiquary (hereafter cited as IA), vol xvii, and Verhandlungen des VII Internationalen Orientalisten-Congresses, Arische Section, pp. 127-147

⁸ JASB, 1912, p 249

the work and of the manuscript is unknown. It cannot be used as evidence upon which to build any scientific conclusion.

Granted that the inscriptions and the Bakhshali manuscript do not at present furnish proof of the employment of numerical symbols with zero and place value in India earlier than the ninth century, there remains a considerable body of literary evidence which has been entirely ignored by Kaye, but which has, it seems to me, definite historical value.

In the Vāsavadattā of Subandhu 1 occurs the following passage: "The stars, because of the nothingness of this world of transmigration, are like ciphers scattered in the sky, as if on the ink-black rug of the Creator who reckons the sum total with a bit of the moon for chalk." The word translated "cipher" is śūnyabindu, "the dot which represents emptiness" The earliest form of the zero, as given in inscriptions of the ninth and tenth centuries and in the Bakhshali manuscript, is merely a dot Also, in the earliest occurrence of zero in connection with the Arabic alphabet (A D 873) the zero is represented by a dot 2 The exact date of this work is uncertain, but it can be assigned with confidence to a date not far removed from AD 600 since it is later than the Nyāyavārttika of Uddyotakara, which can be assigned with certainty to the sixth century, and earlier than the Harsacarita of Bana which can be assigned with certainty to the early seventh century. Subandhu is named in the Gaudavaho of Väkpati, which dates from the beginning of the eighth century It is impossible for the Vāsavadattā as a whole to be as late as the tenth century? The passage in question is found in all editions and in all manuscripts which have been reported Philologically there is not the slightest reason for considering the passage to be an interpolation of date later than the end of the ninth century.

Numerical symbols are not used in any of the old Indian works on mathematics and astronomy which have been preserved, except in the Bakhshali manuscript. These works are all in verse, and in verse such numerical symbols could not be used. It was necessary to use the ordinary names for the numbers or numerical words or combinations of consonants and vowels with numerical value. Therefore the occurrence of any of these methods does not suffice to prove with certainty that the author was ignorant of numerical symbols with place value.

The commonest way of expressing numbers in literary works from the sixth century on is that of using words with numerical meaning.

¹ Ed Hall, p. 182

² Karabacek, in Wiener Zeitschrift für die Kunde des Morgenlandes, xi, 13

³ Gray, Vāsavadattā, pp 3-12.

Words which denote pairs such as twins, eyes, ears, hands, and the like, mean two. Kha, śūnya, ākāśa, ambara, viyat, etc., which denote "empty space, hole, sky, nothing," mean zero. The oceans are 4. The teeth are 32. The fingers or nails are 10. Such words denoting numbers from 0 to 49 are in common use. There is a host of synonyms in Sanskrit, so that an author writing in verse need never hesitate for a word which will fit into any place in any metre. It is not possible to express easily in verse a large mass of numerical data by means of the ordinary words denoting numbers.

The earliest Indian inscription which contains a numerical word is from the eighth century, or, if this and another inscription of A D. 813 are forgeries, from A D 945 But numerical words are used in Sanskrit inscriptions in Java in the eighth century and in Indo-China in the seventh century (beginning in A D. 604) ¹ The system must have been in use in India earlier than in these distant colonies, unless, as Kaye suggests, ² it "was introduced about the ninth century, possibly from the East" This opinion seems to be based only on the priority of the inscriptions of Java and Cambodia. It disregards completely the certain evidence of Indian literature. There is not a shred of positive evidence in favor of it

Although in our fragmentary inscriptional material in India there is no certain trace of this method until the eighth or ninth or tenth century, there is ample literary evidence for its earlier use 3 Varāhamihira employs this method in his Brhat Samhitā and in his Pañcasiddhāntikā. The instances are so many that it is not worth the trouble to enumerate them Both works can be dated with certainty in the sixth century A D It is used by Brahmagupta in his Brahmasphutasiddhānta, which can be dated with certainty at the beginning of the seventh century The date of Lalla's Sisyadhīvīddhida, which also makes use of numerical words, is not certain. Such evidence as there is points to the sixth or seventh century. This same method is used in the Sūryasıddhānta. The original text of this work was earlier than AD 500, since Varāhamihira gives an abstract of some sections of it; but our preserved text differs in some particulars from the one described by Varāhamihira and must therefore be a reworked text of uncertain date. It cannot be proved with certainty that the original text used numerical words Varāhamıhıra in his abstract of the four

¹ IA, xviii, 24, 48, Barth, "Inscriptions Sanscrites du Cambodge" in the Notices des manuscripts de la Bibliothèque Nationale, xxvii, 31

² Indian Mathematics, p 31, JASB, 1907, pp 475 ff.

³ Bühler, Indische Palaeographie, pp. 80-82.

other early Siddhāntas also makes use of numerical words, but it cannot be concluded with absolute certainty that these Siddhāntas used such words. It is barely possible that Varāhamihira may be summarizing them in language of his own. It seems unlikely, however, that a large mass of numerical data should have been expressed in verse with nothing but the ordinary names of the numbers. It seems to me likely that even the five old Siddhāntas, none of which have been preserved in full form except the reworked Sūryasiddhānta, made use of numerical words

In order to uphold his position, Kaye would have to maintain that the above-mentioned texts of Varāhamihira, Lalla, and Brahmagupta, in which numerical words are used commonly, are not originals at all, that we have only completely rewritten texts, versions dating from the tenth century or later, in which all of the numbers have been expressed in an altogether different system from that of the original texts. It is impossible for any Sanskritist who has worked with any care through these early mathematical and astronomical texts to subscribe to such a theory

Moreover the beginnings of this method can be traced back with certainty beyond a D 500, to still earlier texts for which no definite date can be given. The Vedānga on Metrics, which goes under the name of Pingala gives examples in very simple form for the numbers 1, 4, 5, 6, 7, 8, 10, 11, 12 The Jyotisa Vedānga in four passages uses numerical words to denote the numbers 1, 4, 12, 27. The Śrauta Sūtras of Kātyāyana and Latyāyana use the words gāyatrī and jagatī, which are the names of metres, in the direct sense of 24 and 48, the number of syllables which make up the metres ¹ None of these texts can be later than the fifth century a D and the last two are almost certainly pre-Christian

This system of numerical words might of course be used in connection with the old numerical symbols without place value. But when in the Sūryasiddhānta (1, 29) the number 4,320,000 is expressed by khacatuskaradārnavāh, that is to say, four zeros or blank spaces, the teeth (32), and the oceans (4), surely a system with place value is implied. In giving numbers by this method the words are always given carefully in a definite order in such a way that as read the numbers denoted by the words are to be applied from right to left. Likewise, in the Brhat Samhilā of Varāhamihira (viii, 20) the number 3,750 is

¹ For all the texts just mentioned, see Weber, *Indusche Studien*, viii, 166–167 and *Über den Vedakalendar Namens Jyotisham* in the *Abhandlungen* of the Berlin Academy (1861), p. 6

expressed by emptiness (0), the arrows (5), the mountains (7), and the Rāmas (3). Surely this implies the recognition that the numerals which make up the number occupy four places. Under the old notation this number would have been expressed by three symbols, that for 3,000, that for 700, and that for 50 It seems to me that the use of long compounds which describe large numbers of several places proves the existence of numerical symbols with place value and zero. The remarks of Woepcke ¹ and Buhler ² are still valid Whatever may be the date of the present Sūryasiddhānta, and whatever system may have been used in the five old Siddhāntas, Varāhamihira carries us back to the beginning of the sixth century for the use of numerical words based on numerals with zero and place value.

The words kha "sky" and śūnya ("empty") imply either the use of a symbol for zero or a blank space. It is possible, but not certain, that the use of a symbol for zero was later than the use of the other nine symbols. That is, it is uncertain whether the system implies place value in our exact sense of the word, or whether it merely implies an abacus, or at least a board divided into perpendicular columns, the columns having the place values of units, tens, hundreds, and so on, while the column which represented an order of numbers that did not happen to be represented was left blank without any special symbol. Kaye denies that any form of abacus was used at an early date in India. I have not yet found definite evidence for the use of a board divided into columns which had place value, but the words kha and śūnya, used in connection with the system of numerical words, imply, it seems to me, either such a board or a symbol for zero as early as the beginning of the sixth century.

There is considerable evidence in India for the use of a board and chalk, or of a board on which dust or sand was sprinkled. Such a board might have been divided into columns and made to serve every purpose of the more highly developed abacus. The Arabic tradition, which is treated as legendary by Kaye, maintains that the Indians calculated on boards covered with dust or sand, or with white chalk on a black board, and refers to boards divided into columns. The western Arabs called their numerical symbols gobar, "dust numbers," and derived them from India. In Brahmagupta's Brahmasphutasiddhānta, x, 62, 66, 67 the word dhūlikarma, "dust work," is used as a synonym of ganīta, "calculation." This, it seems to me, is sufficient proof of the authenticity of the Arabic tradition. The passage quoted above

¹ JA (1863) 1, 447.

² As quoted by Bayley in JRAS, 1883, 23-24

from the Vāsavadattā proves the use of chalk and some dark surface on which calculations could be made by about A.D. 600. Varāhamihira (Pañcasiddhāntikā, iv, 37) remarks that even an ignorant fellow can reckon with lines made by chalk. There is also an important passage in the Divyāvadāna (p. 263): 1 Bhūriko gaņītre kṛtavī śvetavarņam grhītvā gaṇayitum ārabdhah paśyati yathā Bhagavatā vyākrtam tat sarvam tathaiva: "Bhūrika was skilled on the instrument for calculation. He took a piece of chalk and began to calculate. He saw that everything predicted by the Holy One was true" The passage deals with astrology, the prediction of the future of a child from the position of the planets at the time of his birth, and demands complicated mathematical calculations. The suffix of the word ganitra denotes means or instrument The word must denote some special contrivance for calculation, a specially prepared board, but whether this was divided into third century B C. at least, but in its present form it is later It must, however, be dated in the early centuries of the Christian era. Varāhamihira's Brhaz Jātaka shows a great development of elaborate astrological calculations at the beginning of the sixth century, involving much arithmetical and algebraical work. The words phalaka and ganana, meaning "wooden board" and "reckoning" can be traced back to Jātaka, 1, 451, Mahāvagga, i, 49 and other Buddhist texts, the earliest of which are probably to be ascribed to the period between the fifth and third centuries B.C. Although the use of a board and training in calculation can thus be traced back into the pre-Christian period, there is no actual description of a board ruled into columns. But the fact that words meaning "emptiness" are used regularly in the later period to denote zero naturally suggests a board and a reckoning by columns with place value, before a symbol for zero was employed. After the discovery of place value, either such a board with columns or a sign for zero is necessary Whether the sign for zero appeared in India simultaneously with the discovery of place value is uncertain.

Granted, for the sake of argument, the use of a board ruled into columns,² it is not necessary to conclude that numerical symbols were employed. Calculations might have been made by placing a certain number of shells or counters in the columns But the regular name for the numerical symbols as a whole is anka, "mark." This word is

¹ Cf Fleet, JRAS, 1911, p 519.

² Cf. Rodet, JA (1880), 11, 463, Bayley, JRAS, 1883, p. 29

Buhler, Indische Palaeographie, p 78.

used by Varāhamihira at the beginning of the sixth century (Bṛhat Samhitā, xviii, 33), and often in the Sūryasıddhānta, as one of the numerical words meaning nine. By the fifth or sixth century, therefore, calculations were made by means of nine numerical symbols (not with counters), probably without a sign for zero. The fact that aṅka was used as a numerical word for nine and not for ten seems to point to the conclusion that at first there were only nine symbols, and that the symbol for zero developed later ¹ It is, of course, possible that the dot was already used to denote zero, but was not regarded as being an anka, since it represented nothing and was merely jotted down in order to prevent the fact being lost sight of that one or more of the orders of numbers was not represented at all

One of the oldest preserved works on mathematics and astronomy is that of Aryabhata The date is given definitely in the text itself as a definitely. This work contains the $Da\acute{s}ag\~{t}tk\~{a}$, which gives in ten very condensed stanzas all the numerical data of Aryabhata's system of astronomy, and the $Ary\~{a}s\'{t}a\acute{s}ata$, which consists of 108 $\~{a}ry\~{a}$ stanzas in three chapters, one on mathematics, and two on astronomy. In the $Da\acute{s}ag\~{t}tk\~{a}$, a peculiar method of notation is used 2 The consonants of the Sanskrit alphabet from k to m are given the numerical values of 1 to 25. The other consonants from g to g are given the values of 3 to 10. The nine vowels and diphthongs from g to g to g to distinction is made between long and short vowels) are attached to these consonants either to add zeros or to give them place value. The stanza is as follows.

Vargāksarāni varge 'varge 'vargāksarāny kāt inmau yah khadvinavake svarā nava varge 'varge navāntyavarge vā.

("Beginning with ka the varga letters are used in the varga places and the avarga letters are used in the avarga places, na plus ma equals ya The nine vowels are used in the two nines of places varga and avarga.") The last clause is left untranslated. The words varga and avarga seem to refer to the Indian method of extracting the square root. The number of which the square root is to be taken is divided off into groups of two digits each. The varga or square places are the first, third, fifth, and so forth, counting from the right. The avarga or non-square places are the second, fourth, sixth, and so forth. The words varga and avarga are used in this sense in the fourth stanza of the Gani-

¹ Cf Woepcke JA (1863), 1, 448

² See Rodet, JA (1880), 11, 444, Fleet, JRAS, 1911, pp. 114, 121, Barth, Collected Works, 111, 182; Jacquet, after Whish, JA (1835), 11, 118.

³ Cf Rodet, JA (1879), 1, 409

tapāda. There is no reason for refusing to take them in the same sense here. The varga letters are those from k to m, which are always arranged in five groups of five letters each The avarga letters are those from u to h, which are not arranged in groups Therefore the vowel a used in varga and avarga places with varga and avarga letters refers the varga letters k to m to the first varga place, the unit place, multiplies them by one The vowel a used with avarga letters u to h refers them to the first avarga place, the place of tens, multiplies them by ten. In like manner the vowel i refers the letters k to m to the second varqaplace, the place of hundreds, multiplies them by a hundred vowel i used with avarga letters refers them to the second avarga place, the place of thousands, multiplies them by a thousand with the other vowels up to the ninth varga and avarga places makes it possible to express numbers up to one followed by eighteen zeros As a matter of fact the largest number expressed in this notation by Aryabhata himself occupies only ten places. The last clause, which I have left untranslated, offers great difficulty It may give, as the commentator Parameśvara says, a way of expressing numbers beyond the nineteenth place by means of an anusvāra used with the The words which I translate "in vowels Fleet emends vā to hau the two nines of places" are translated by Rodet as "in the two nines of zeros" That is equivalent to saying that each vowel adds two zeros to the numerical value of the consonant This, of course, will work from the vowel i on, but the vowel a does not add two zeros It adds no zero or one zero, depending on whether it is used with varga or avarga letters. It seems to me, therefore, more likely that a board divided into columns is implied rather than a symbol for zero, as Rodet thinks.

This stanza occurs in the $Da\acute{s}ag\~{i}tik\~{a}$, which, if the name is strictly accurate, ought to contain ten stanzas. As a matter of fact, it contains thirteen. There is an invocation to the Gods, this technical $paribh\~{a}s\~{a}$ stanza explaining the terminology which is to be used in the $Da\acute{s}ag\~{i}tik\~{a}$, ten stanzas giving the numerical data on which Aryabhata's descriptive astronomy is based, and a colophon. The first stanza contains the name Aryabhaṭa. The thirteenth stanza begins with the words "Having known these ten stanzas which describe the movements of the earth and planets in the celestial sphere". The $paribh\~{a}s\~{a}$ stanza is not counted. It is obviously from this thirteenth stanza that the name $Da\acute{s}ag\~{i}tik\~{a}$ was derived. I see nothing suspicious in the discrepancy between the name $Da\acute{s}ag\~{i}tik\~{a}$ and the number of stanzas found

in most of the manuscripts.¹ Nothing is gained by eliminating the paribhāsā stanza as of later date and hence getting rid of the objectionable words varga, avarga, and kha. The explanation given above, or the slightly different ones of Rodet and Fleet (which amount to exactly the same thing so far as the calculation is concerned), are the only ones which will make the numbers come out right, and could be deduced from the numbers involved in Aryabhaṭa's astronomical elements even if this paribhāṣā stanza were not present. We can check Aryabhaṭa's numbers by means of later works, especially that of Lalla, which expressly state that they employ the numerical data of Aryabhaṭa with slight modifications. These make use of the system of numerical words, so that there can be no mistake on our part in knowing approximately the numerical values of Aryabhaṭa's combinations of consonants and vowels.

In the other sections of Aryabhata's work only a few numbers are given, and these are always expressed by the ordinary words which denote the numbers. Neither the peculiar notation described above. nor the system of numerical words is used Kave insists that Arvabhata invented his peculiar system of notation because no convenient system of numerical symbols was known to him. and because the system of numerical words had not yet been invented. The matter is not as simple as that It is much more likely that Arvabhata invented and used his peculiar system only for the practical purpose of giving in a very concise form a large mass of numerical data in verse All of this is crowded into ten brief stanzas The rest of the work is descriptive and contains very few and simple numbers. Numerical symbols could not be used in verse. The ordinary words for numbers, although usable for a few simple ones, are clumsy, and badly adapted to giving a compact mass of numerical data in verse. A system of consonants and vowels with numerical value allows much greater conciseness than the system of numerical words.2 For instance Aryabhata gives in one stanza the whole table of twenty-four sines which, as expressed in the Sūryasıddhānta by numerical words, occupies five stanzas.

No later authors follow Aryabhata's method, as would be expected if he for the first time had made it possible to express a large mass of numerical data in verse. It seems to have been purely an individual

¹ See Kern, Brhat Samhtla, p 58 of preface Kaye (JASB, 1908, p 111) remarks that there are manuscripts which contain fifteen stanzas These doubtless correspond to the manuscripts described by Bhau Daji (JRAS, 1865, p 397), who says that the two additional stanzas are not in the arya metre and are obviously a later addition.

² JA (1880), 11, 440, 453, Barth, 111, 182

invention for a very particular purpose, and that purpose was not computation but description. Only Brahmagupta at the beginning of the seventh century actually quotes any of Aryabhaṭa's combinations of consonants and vowels with numerical value. Brahmasphuṭasrddhānta i, 12, xi, 5, and xi, 17 quotes Daśagītikā, 3, 1 and 4. In spite of its wonderful conciseness, this system could not become popular in literature because it manufactured such barbarous and uneuphonic combinations of consonants. The use of it in the ten concise descriptive stanzas of the Daśagītikā is no proof at all that Aryabhaṭa was ignorant of the system of numerical words or of numerical symbols with place value. It is quite possible that he used such symbols in his actual calculations. It is pure assumption to conclude with certainty that his actual calculations must have been made by means of consonants and vowels with numerical value.

Kaye has great doubt as to the authenticity of the work as a whole, and in particular insists that the *Ganitapāda* at least is of much later date.¹ The problem of the two or three Aryabhaṭas is a difficult one. Suffice it to say that considerable portions of the work can be proved by quotations in Brahmagupta to be prior to the first part of the seventh century and to have been written by Aryabhata. As Kaye remarks there are no quotations from the *Ganitapāda*. This, it seems to me, is due to the fact that Brahmagupta quoted only such passages as he desired to criticize unfavorably. Either he had no criticism to make of the mathematical section of Aryabhata's work, or he did not take the trouble to criticize it because none of it was in contradiction with *smṛti*. In practically every case where he combats Aryabhaṭa, it is because the latter departs from *smṛti*.

Later another system of numerical letters, called $katapay\bar{a}di$ from a word in the stanza which describes it, came into use, especially in southern India. The letters k to \tilde{n} and t to n have the values of 1 to 10, the letters p to m the values of 1 to 5, the letters p to p the vowels have no numerical values. The system employs place value. This method allows the choice of much more euphonic combinations of letters, and skilled writers worked out words which had connected meanings, as in the case of the Semitic chronograms. The origin of the system is unknown. The earliest certain instance of it is in the colophon of a manuscript dated a date. However, it is used in an astronomical work, the $Mah\bar{a}siddh\bar{a}nta$ of a later Aryabhaṭa, composed between the seventh and eleventh centuries. It is also vouched for by the astronomical $Jaimin S\bar{u}tras$ (1, 2, 2) of un-

¹ Bibliotheca Mathematica, x, 289, Indian Mathematics, p 11

known date. The date of the origin of this system is too uncertain to allow of using it in connection with the problem under discussion. It is uncertain whether it is of independent origin or is a modification of the system of Aryabhata.

If the secrecy of the Neo-Pythagoreans is appealed to as the reason why their knowledge of numerical symbols with place value did not leak out in Europe until a late date (except for the doubtful passage of Boethius and for the supposed teaching of it in Persia), we may equally well insist on the same possibility in India. Varāhamihira (Brhat Samhītā, xiv, 28) says "The teacher is to communicate these things only to a pupil of steadfast mind; and the pupil after having learned them is to make his astronomical contrivances in such a way as to keep them secret from his own son even " Brahmagupta (Spastādhikāra, p. 45) after an elaborate explanation of the method of calculating the true places of the planets remarks. "This is not to be given, even under oath, to one who is not a son since it will destroy the good karma of the one who so gives it. and since military expeditions, marriages, and horoscopes depend on the true positions of the planets." Many such quotations could be given In the early period in India much secrecy was drawn over astronomical learning The new numerical symbols may have been used by groups of mathematicians and astronomers for a long time before they came into general use and before they were employed in inscriptions Writing was known in India several centuries before it appears in inscriptions This fact alone is enough to make very dubious Kaye's method of determining the date of the invention of the numerical symbols with place value solely from inscriptions Even in Europe after the time of Gerbert (circa AD 1000) numerals with place value did not come into common use, nor are they found on coms and inscriptions, for more than two centuries

In India from a very early period there was a preoccupation with large numbers and with arithmetical problems. The enumeration of large numbers mounting by powers of ten or a hundred was carried further in India than anywhere else in the ancient world. To each place (power of ten or a hundred) a definite name was given. The Yajur Veda (probably as early as the eighth century B.C.) gives names for classes of numbers from one to a number which we should write as one with twelve zeros. The Mahābhārata gives names for classes of

Indische Studien, viii, 160, JA (1835), ii, 123-125, JRAS, 1911, p. 788, and 1912,
 p. 459, Zeit f die Kunde des Morgenlandes, ii, 425, Bühler, Palaeographie, §35b

numbers up to one with fifteen zeros. There are many early passages containing such enumerations.¹ The Buddhist Lalita Vistara, which even in its present form belongs to the early centuries of the Christian era, has a long chapter describing the contest at arms and scientific knowledge between the young Buddha and the other princes. The description of the contest in the knowledge of numbers and arithmetical problems occupies seven pages. The names of the classes of numbers up to ten to the ninth power are taken for granted as well known to everybody. Then names are given mounting by powers of a hundred for classes of numbers up to ten to the fifty-third power. A few still higher numbers are given ²

Early in the seventh century Brahmagupta remarks at the end of his chapter on mathematics. "These problems are given only for pastime. The wise man can invent thousands of others, or he can, on the basis of the rules given above, solve the problems propounded by others. As the Sun with its light darkens the stars, so can the man who is skilled in these rules darken the fame of other mathematicians in assemblies when he propounds algebraic problems or solves them." Such passages prove at an early date in India a great interest in numbers bers and numerical problems. Such contests in mathematics among the learned carry us back in thought to similar contests in knowledge of the sacrifice and of philosophy which we find recorded in the Upanishads in the sixth century B C

Such enumerations of numbers based on powers of ten lead easily to the discovery of place value, much more easily than the clumsy Roman method or the Greek system, with the myriad as unit, could do. All that was necessary was to write down in numerical symbols the values of the different classes of numbers as they were given

Kaye (JRAS, 1910, pp 759-760 and more positively Scientia, xxv, 13) remarks. "Bhaskara speaks with disdain of his Hindu predecessors, but cites certain anonymous "ancient teachers" as authorities. If these ancient teachers had been Hindus, he would most probably have mentioned them by name and indicating thereby certain teachers who were not Hindus" To a Sanskritist who is acquainted with Indian habits of quotation, these statements are so utterly absurd that it is is not worth the time to discuss them.

It seems to me that the Indian literary evidence proves conclusively the presence of a symbol for zero by AD 600 Before this could be

¹ JA (1863), 1, 251, Zeutschrift der Deutschen Morgenlandischen Gesellschaft, xv, 132–140, Indische Studien, viii, 324–325

² Ed. Lefmann, p 147 Cf JA (1863), 1, 248

referred to in a work of general literature it must have had considerable history behind it. It also proves the knowledge of nine symbols with place value (with either a blank column on the reckoning board for zero, or a symbol for zero) by the end of the fifth century A.D. at least. Beyond that the present evidence does not go. But this carries the Indian knowledge of symbols with place value back at least four hundred years earlier than the date assigned by Kaye.

As further proof of Indian knowledge of digits with place value at a date earlier than that maintained by Kaye reference should have been made to the Yogabhāṣya iii, 13 (Anandāśrama edition, p. 130, and Woods' translation, p. 216) yathaikā rekhā śatasthāne śatam daśasthāne daśaikā caikasthāne, "Thus the same stroke is termed one in the unit-place and ten in the ten's place and a hundred in the hundred's place" and to Śaṅkara's commentary on the Vedānta-Sūtras ii, 2, 17 (Nirṇa-yasāgara edition of 1917 with Bhāmatī, Kalpataru, and Parimala, p. 521, and Thibaut's translation, vol 1, p. 397) yathā caikāp satī rekhā sthānānyatvena niviśamānaikadaśaśatasahasrādiśabdapratyayabhedam anubhavati, "So, again, one and the same stroke is, according to the place it is connected with, spoken of and conceived as meaning either [one, or] ten, or hundred, or thousand, &c."

The Yogabhāsya may be as old as the sixth century A.D. (Winternitz, III, 461) and Sankara is at least as early as 800 A D.

HARVARD UNIVERSITY

ÜBER DIE SPÄTERE ENTWICKLUNG DES INDISCHEN STAATSRECHTS

By JULIUS JOLLY

DIE epochemachende Entdeckung des Kauṭilīya oder Kauṭalīya Arthaśāstra hat zu weiteren Nachforschungen über die Quellen des ai. Staatsrechts veranlasst, so ist es dem unermudlichen Javaswal in Patna, einem trefflichen Kenner der au Politik und Rechtswissenschaft, gelungen drei Hss. des Rājanītiratnākara ausfindig zu machen und auf Grund desselben dieses bisher nur auszugsweise bekannte Werk im Auftrag der Bihar and Orissa Research Society kritisch herauszugeben.1 Gedruckt war bis dahin von dem gelehrten Minister Candeśvara, der dieses Lehrbuch der Politik verfasst hat, nur das juristische Lehrbuch Vivādaratnākara, einer der sieben Teile seiner grossen Enzyklopadie des Dharma, in der Bibliotheca Indica. Die Enzyklopadie wird in dem Rājanītiratnākara (p. 9) unter dem Namen eines Dharmašāstranibandha zitiert, muss also alter sein als der Rajanītiratnākara, der im Auftrag eines Konigs Bhaveśa von Mithilā geschrieben ist, welcher nach Javaswal nach 1370 n. Chr auf den Thron kam, als Candeśvara schon ungefahr 85 Jahre alt war, was durch andere Beispiele von Langlebigkeit in dessen Familie plausibel gemacht wird. Jedenfalls hatte Candeśvara, nach seiner eigenen Angabe in der Enzyklopadie, schon 1314 sein Gewicht in Gold an Brahmanen verschenkt, sein Gonner war damals der König Harisimhadeva aus der Karnātaka-Dynastie, der um 1304 zur Herrschaft gelangte und um 1310 Candeśvara auf den Ministerposten berief, den schon vorher dessen Vater Vīreśvara bekleidet hatte. Es scheint also dass Candesvara erst als ein im Konigsdienst ergrauter Minister das Bedurfnis empfand, seine politischen Erfahrungen in einem Lehrbuch fur Fursten niederzulegen.

Dieses Werk handelt in 16 Abschnitten (taranga) über den König, die Minister, den Purohita, den Oberrichter, die Richterkollegien, die konigliche Burg, die Beratschlagung, den Schatz, das Heer, den Heerfuhrer, den Gesandten, die Pflichten des Königs, die Strafgewalt, die Ubergabe der Herrschaft an den altesten Sohn des Königs, die Übergabe der Herrschaft an den Altesten durch den Purohita, die Weihe des neuen Königs. Originell und interessant ist die Unterscheidung

¹ The Rājanīti-Ratnākara, by Chandeśvara, ed by K. P. Jayaswal, M. A. Calcutta, 1924 28 8.873., 8°.

von drei Arten des Königtums: Oberkönig (samrāţ oder cakravartin). tributpflichtiger (sakara) und tributfreier (akara) König, wobei mit dem sakara dem Herausgeber zufolge Caṇḍeśvaras eigener Patron, der König Bhaveśa gemeint ist, der von dem muhammedanischen Kaiser von Delhi als seinem Lehensherrn abhängig war. Auf die Kaiser von Delhi ware nach Jayaswal auch die Stelle uber die nur durch die Tapferkeit ihres Arms zur Herrschaft gelangten (kevalaśauryādyāptarājyasya), der indischen Königsweihe entbehrenden Fursten zu beziehen

Die Quellen unseres Werks kann man aus den darin vorkommenden Zitaten erschliessen, unter denen die 38 Zitate aus Manu an erster Stelle stehen und M. als die Hauptquelle erscheinen lassen. Von anderen Smrtis wird Yājñavalkya 19mal zitiert, Nārada 16mal, der Herausgeber hat diese Nārada-Zitate grosstenteils in meiner Ausgabe der Nāradasmriti nachgewiesen und bemerkt uber den Rest mit Recht, dass diese Zitate ihrem Inhalt zufolge nicht aus einem Gesetzbuch, sondern nur aus einem ebenfalls dem Närada zugeschriebenen politischen Werk stammen können, wie es von 2 solchen Stellen auch ausdrucklich heisst Rājanītau Nāradah, Nītau Nāradah gedruckte Nāradasmrtı ihrer Einleitung zufolge nur uber eigentliches Recht handelt, so kann sie durch ein Buch über Rajaniti erganzt worden sein, das inhaltlich etwa dem 7. Buch bei Manu entsprach, auf das eines dieser Zitate auch besonders hinweist rājānam ariśeseņa nijagāda Manuh purā, vgl. M. 7, 1. Ubrigens enthalt auch der unten zu erwahnende Kommentar zu Somadeva viele solche Nārada-Zıtate uber Nīti. Im Ratnākara erscheinen ferner Kātvāvana, Vasistha. Visnu, Vyāsa, Hārīta u. a. Smrti-Verfasser, das Mahābhārata 14 mal, Rāmāyana 2 mal, wenige Purānas, von juristischen Kommentatoren und ihren Werken Laksmidhara und sein Kalpataru, Kāmadhenu, Kullūkabhatta, Gopāla, Mitākṣarā, Śrīkara u. a Kullūka muss hiernach fruher gesetzt werden als ich fruher annahm (13 oder 14 statt 15. Jh). Viel geringer als die Entlehnungen aus dem Dharmaśāstra sind diejenigen aus dem Arthaśāstra, wofur ausser den schon genannten politischen Zitaten aus Nārada fast nur diejenigen aus dem Kāmandakīva Nītisāra in Betracht kommen, der als Kāmandaka, Arthaśāstra, Nīti und Rājanīti zitiert wird, im ganzen 15mal, ferner die 3 Zitate aus einer Sukranīti, die aber in der zuerst von Oppert herausgegebenen Nīti dieses Namens nicht vorkommen, ein neuer Beweis für die Unechtheit dieses spaten Machwerks.

Aus dem Überwiegen des Dharmaśāstra uber das Arthaśāstra in unserem Werk hat Jayaswal geschlossen, dass schon im Zeitalter

Lakṣmīdharas, dessen Kalpataru Caṇḍeśvara stark benutzt hat, eine neue politische Literatur aufkam, die nicht mehr auf den alten Arthaśāstras eines Uśanas, Bṛhaspati und Kauṭilya, sondern auf den Lehren des Dharmaśāstra fusste und daher auch die alten Bezeichnungen des Staatsrechts als Arthaśāstra und Daṇḍanīti aufgab und den neuen Titel Rājanīti einfuhrte. Die Verfasser dieser Werke waren Juristen aus der Dharmaśāstra-Schule und schrieben Lehrbucher des Dharma. In seiner Zugehorigkeit zu dieser jungeren politischen Richtung sieht Jayaswal die Hauptbedeutung des von ihm veroffentlichten Rajanītiratnākara.

Der Übergang von arthaśāstra zu rājanīti liegt allerdings schon im Kāmandakīya Nītisāra vor, wo der Inhalt dieses Werks als rājavidyā bezeichnet und schon dem Vorganger Kamandakas, dem Visnugupta oder Kautilya, das Verdienst beigelegt wird, das Ambrosia des Nītiśāstra aus dem Ozean des Arthaśāstra herausgeholt zu haben (I, 6-8). Betr des rāja in rājanīti ist auch an das alte rājadharma "Konigspflichten" und an rājaśāstra (rājavidyā) zu erinnern, das durch die Ubereinstimmung von Mhbh XII, 58 mit Aśvaghosa I, 46 und Jātakamālā IX, 10 als alt erwiesen wird 1 In dem alten Kalpataru (12. Jh) lautet der Titel des politischen Teils ranadharmakanda, wie aus der Inhaltsangabe bei Eggeling I O III, 410 zu entnehmen ist Anfuhrungen enthalt ubrigens dieser rajadharmakanda nur solche aus den Smrtis und Puranas, bildet den 11. Abschnitt einer 12 teiligen umfassenden Enzyklopadie des Dharma und entspricht also der Charakterisierung, die Jayaswal von den spateren Systemen der Politik gibt Es soll nun noch an einigen anderen Werken dieser Art gepruft werden, ob Jayaswals Annahme allgemein begrundet ist

Betrachten wir zunachst den Nītimayūkha oder Rājanītimayūkha des Nīlakantha, der zwar schon 1880 in Benares gedruckt, aber bisher noch nicht naher untersucht ist, Diese ausfuhrliche Darstellung der Politik bildet das 5 Buch in dem um 1640 unter den Auspizien des Konigs Bhagavantadeva entstandenen Bhagavantabhāskara, der eine grosse 12teilige Enzyklopadie des Dharina ist, wie der Kalpataru. Aber der Nītimayūkha schopft viel mehr aus der politischen Literatur als der Rajanītiratnākara und der Kalpataru. Grosser Wert wird hier allerdings auf die religiose Konigsweihe (abhiseka) gelegt, deren Beschreibung die ganze erste Halfte des Buchs fullt Dann folgen eine Menge kurzer Kapitel, über die 7 Elemente des Staats, die 18 Laster eines Konigs, die täglichen Pflichten desselben, seine Diener, seine sechsfache Politik, seinen Harem, Prinzenerziehung, den Schatz, die

¹ Vgl Winternitz, Gesch d ind Litt, III, 506 ff

Burg und das Heer, Elefanten und Pferde, Gesandte, Spione, Kriegführung, Spiel u. a. Hier werden nun sehr viele Stellen aus Kāmandaka oder Nītisāra angeführt, ich konnte uber 50 solche Zitate zahlen, so beruht die Darstellung der sechsfachen Politik wesentlich auf dem Nītisāra. Selbst Cāṇakya und das Kauṭilīya waren dem Verfasser noch bekannt, wie das Zitat auf p 52 zeigt. sthalamṛgayām āha Cāṇakyaḥ suparīksitaraksitām tu sīmno laghuyānas tu mṛgāṭavīm upeyād iti, was ungefahr K. 1, 21, 43 entspricht, nur steht dort statt mṛgāṭavīm das synonyme mṛgāranyam. Auch Varāhamihiras Yogayātrā ist reichlich benutzt, ein Zitat aus dem Mānasollāsa, einer alten Enzyklopādie fur Fursten, findet sich auf p 58. Freilich werden auch die Smṛtis, Manu an der Spitze, und die Purāṇas sowie Mhbh häufig genug zitiert, von Dichtern Māgha und Kālidāsa, aber den Grundstock des zweiten Hauptteilsbilden die Zitate aus dem Nītisāra.

Ein ganz selbstandiges Werk uber die Pflichten eines Konigs ist die noch ungedruckte Rājabhūṣanī von Rāmanāthadīksita,1 die nach ihren Zitaten aus Kalpataru, Kāmadhenu, Kullūka, Dāyatattva und Divvatattva (von Raghunandana), Mādhava, Vivādacintāmani, Vivādaratnākara u. a. Dharmanibandhas und Kommentaren zu schliessen kaum vor 1600 entstanden sein kann, also wohl ungefahr in die gleiche Epoche wie Mayūkha und Rājanītiprakāśa gehort. Dieses Werk handelt im Anschluss an die Smrtis uber die Gottlichkeit des Konigs, seine Strafgewalt, seine Rate, seine Schreiber und seinen Hauspriester, die Ehrung der Brahmanen, den königlichen Gesandten, die Burg, die Aufgaben und die Laster des Konigs, Kampfregeln, Auszug in den Krieg, tägliche Pflichten des Konigs, Verwaltung und Rechtsprechung, gefundene Schätze, Zeugenverfahren, Eide, Strafen fur Meineid, Mass und Gewicht, Schuldrecht, Hinterlegungen, Opferpriester, Opferlöhne und andere Löhne, Injurien, Sachbeschadigung, Diebstahl, Ehebruch, Spiel und Wetten, Grenzstreitigkeiten. Dann folgt ein kurzer Hinweis auf die im Arthaśāstra (arthaśāstre) behandelten Gegenstände: Landmessung, Kochkunst (sūpakarana), Prufung und Heilung der Elefanten und Pferde, auf die 18 Konigswissenschaften (rājavidyā), besonders Nīti-, Dhanur- und Arthaśāstra, auf die im Mhbh. genannten Autoritaten u. s w. Das Schlusskapitel handelt uber Konigsweihe (rājābhiseka) und endigt mit einer Reihe von Mantras aus dem Agnipurāna. Von sonstigen Purāņas zitiert die Rājabhūsanī das Skandapurāņa, Garudapurana, u. a., die Hauptquelle bilden aber die Smrtis, besonders das 7. Buch des Manu und der Rajadharma des Mhbh. Das

¹ Münchener Sanskrit-Handschrift Nr 322, Raj Mitra Nr 1207.

Arthaśāstra ist in dieser Darstellung der Rājanīti nur durch die erwähnten kurzen Hinweise vertreten.

Hier verdient auch der angeblich von Konig Bhoja (11, Jh.) verfasste, 1917 in Calcutta gedruckte, ganz versifizierte Yuktikalpataru Erwähnung, der allerdings nur in seinem ersten Abschnitt uber Politik handelt (iti samksepatah proktā rājanītih, p 17), weiterhin uber Baukunst, Hausgerate, Edelsteine, Schmuck, Waffen, Haustiere, Fahrzeuge, Schiffe, Schiffsbaukunst u. a. zum Arthaśāstra gehorige Gegenstände. Man kann demnach dieses Werk als ein Arthasastra bezeichnen, obschon das Wort arthaśāstra nicht darin vorkommt. Als massgebend für Nīti werden im ersten Abschnitt die Nītis von Brhaspati und Uśanas bezeichnet, weiterhin allgemein die Nītiśāstras zitiert. Tatsachlich finden sich hier manche Anklange sowohl an das Dharmaśāstra als an das Arthaśāstra. So ist p. 11, 72-74 = M. 7, 63, 64, 66, p. 15, 105 = M. 7, 20, p. 16, 113, 115 = M 7, 147. 149, p. 17, 118 = M. 7, 74. Anderseits 1st p. 8, 52 = Nītisāra 16, 37, p. 9, 63 = Nītisāra 13, 26, p. 10, 71 = Nītisāra 13, 33, p 12, 81 f. = Nītisāra 9, 1, p. 12, 84 = Nītisāra 9, 28, p 13, 90 f. = Nītisāra 11, 23 f., p. 14, 93 f. = Nītisāra 30, 29 f., p. 5, 34 = K. A. 2, 9, 23, p. 11, 75 (die drei Arten von Gesandten = K.A.1, 6, 2-4. In den weiteren Abschnitten finden sich zahlreiche Zitate aus dem Garuda-Purāņa und anderen Purānas, ausserdem aus Lauhapradīpa und Lauhārnava über Metalle, Pālakāpya uber Elefantenkunde u. a Dieses Werk ist wichtig fur Kulturgeschichte, besonders fur Geschichte des Schiffbaus, und zeugt fur das Fortleben des Arthaśāstra.

Allerdings konnte sich die unmoralische Staatskunst des bekanntesten Arthaśāstra, des Kauṭilīya, nicht behaupten mit ihren Ratschlägen uber raffinierten Steuerdruck, willkurliche Einziehung grosserer Vermogen, Tempelraub, staatliche Konzessionierung der Trinkbuden, gerichtliche Tortur, Ablosung der Korperstralen durch Entrichtung von Geldstrafen, Erleichterung der Ehescheidungen, schadlichen Zauber, Betrug und Hinterlist jeder Art. Diese Lehren mussten schon bei der Umarbeitung des K. A in den popularen versifizierten Grundriss Kāmandakīya Nītisāra einer einwandfreieren, wenn auch keineswegs tadellosen Moral Platz machen. Auch in der Marchen- und Fabelliteratur wie in den Kommentaren zu Manu wurde das K. A. als politisches Lehrbuch durch den Nītisāra ersetzt, der besonders im Hitopadeśa ausgiebig zitiert wird. Hatte doch bekanntlich schon Bāṇa in der Kādambarī (p. 109) das "Kauṭilyaśāstram" als ein ruchloses, von

¹ Vgl Winternitz, Gesch. der ind. Litt., III, 532.

grausamen Lehren strotzendes Werk (anršaṃsaprāyopadešanirghṛṇam) gebrandmarkt.

Eine ahnliche Entwicklung wie in der brahmanistischen zeigt sich auch in der Jaina-Literatur, wenn man Somadevas Nītivākyāmrtam (10 Jh.) mit Hemacandras Laghu-Arhanniti (12. Jh.) vergleicht. Das erstere Werk ist noch stark von dem K A. abhängig 1), wenn es auch kaum mit Ghoshal² als ein schwacher Abklatsch (a poor copy) des letzteren Werks bezeichnet werden kann Die neue Ausgabe des Nītiväkyämrtam von N. R. Premi (Bombay, 1923) enthalt einen alten Kommentar, der voll von interessanten Zitaten aus bisher unbekannten Nītiwerken 1st, die Somadeva neben dem K. A. fur sein Lehrbuch benutzt hat, das Jayaswal 3 als ein Gemisch von Ethik und Politik, Winternitz 4 als ein padagogisches Werk fur Konige bezeichnet, und das namentlich in dem letzten Abschnitt über Vermischtes (379-405) die verschiedensten Klugheitsregeln enthalt. Die Laghu-Arhanniti 5 dagegen charakterisiert Ghoshal mit Recht als ein Werk nach Art der brahmanistischen Smrtis, nur dass darin die Rajanīti auf den jaınistischen sagenhaften Konig Rsabha zuruckgefuhrt wird. Der Anschluss an Manu u a Smrtis tritt besonders in der Lehre von den Prozesson und den religiosen Bussen hervor 6

So hat Jayaswal die Tendenz der spateren ai. Politik im ganzen richtig charakterisiert und hat sich die traditionelle Ethik als starker bewahrt als die blosse Nutzlichkeitsmoral des Arthaśāstra, gemass dem alten Grundsatz (Y 2, 21; Nār. 1, 1, 39), dass das Dharmaśāstra dem Arthaśāstra uberlegen ist und in Zweifelsfallen die Richtschnur für das einzuschlagende Verfahren abgeben soll.

UNIVERSITY OF WURZBURG.

THE BIRTH OF LORIK

By Sir GEORGE A GRIERSON

In the Indian Province of Bihār, and in the United Provinces of Āgrā and Audh, the Gōwālās (Gōpālakas) or Ahīrs (Abhīras) are well known as an important pastoral tribe. Their caste-profession is cattle-keeping and selling milk and its products, and, though the milk they sell is not always free from suspicion,—witness many proverbs,—they are, as a body, looked upon with some consideration. There is a famous tribal legend concerning an Ahīr named Lōrik, which is most popular among them, and the folk-epic describing his birth and adventures is sung at all their festivities. A Bihār proverb runs.

kětnő Ahırā hōhî sıyânā Lörık chārı na gāwahī ānā

However learned an Ahīr be, Nothing but Lörik singeth he.

The cold weather of the years 1888 and 1889 is marked in my memory by two incidents. We were then stationed in the Gayā district of Bihār, and were made happy by a visit from Professor and Mrs. Lanman on their bridal tour through India. Later on, in the same cold weather, while on my own official tour, I found myself in camp at the traditional scene of the birth and early adventures of this Lōrik, and succeeded in getting copies of two recensions of the whole huge poem, taken down from the mouths of two reciters of repute. It is pleasant to think that these two incidents, occurring almost together, so long ago, find themselves again associated with all their memories in these pages.

A not very complete, and not always accurate, abstract of the story of the cycle grouped together under the name of the Gīt Lōrīk is given by Beglar on pages 79 ff. of volume VIII of the Archaeological Survey of India This has been corrected and further condensed by Crooke on pages 55 ff of volume I of The Tribes and Castes of the North-Western Provinces and Oudh; so that my readers can mercifully be spared from its repetition On the present occasion I therefore content myself with giving the translation of the two versions of the first canto, describing the circumstances of the hero's birth. This will be found interesting by students of Indian religion. It is commonly asserted that among the Hindūs of northern India, the worship of the Vedic god Indra disap-

peared many centuries ago, and was supplanted by that of Viṣṇu of Siva. Apparently this was entirely true only for those who lived in cities, for those who lived a learned or an ascetic life, or for those people who have been preserved to us in literature. Only with difficulty did the worship of Viṣnu reach the pastoral and agricultural classes, that is, the great bulk of the community, which was largely Munḍā or Dravidian in origin. I have dealt with this question at some length in a paper in the "Zeitschrift für Indologie und Iranistik" and I now give one example that is not there mentioned, but that has direct connection with Ahīrs.

According to the Bhagavata Purana, X, xxiv, the cowherds in Kṛṣṇa's time worshipped Indra. When Kṛṣṇa asks Nanda why he does this, Nanda replies (ll 8-11), "Parjanya, the Rain-cloud, is the Lord Indra Himself The clouds are his dearly-loved forms. These pour down water for the delight of all beings and for keeping them alive. Dear one, we and other men sacrifice to this Ruler of the Rain-clouds those things which spring into existence through his rain, and with what remains over after that, we men support ourselves," etc. Here we see clearly that it was as a Rain-god that Indra was the chief object of worship among pastoral "and other" tribes. The rest of the story is well known. Krsna persuades them to abandon the worship of Indra, and, instead, to worship him (that is, Visnu) under the form of Mount Govardhana. There is a contest between Indra and Krsna. in which the latter is easily victorious. We have here a Brāhmanical account of an attempt to spread the new, fashionable Visnu-worship among the lower orders, which, according to the writer, was successful. If there was such a success, it was only temporary, for Indra, the Rain-god, is still a divinity of the Ahīrs and other pastoral and agricultural people. In my paper in the Z I I. above referred to, I have shown in detail the state of affairs in modern times. The cowherd peasant of Bihār has, I need hardly say, his local godlings, and those to whom it is useful to appeal on special occasions. He also knows about Vișnu and Siva, but they are misty characters far beyond his mental horizon. In practice his chief great deities are Indra and Durgā, the latter acting as Indra's vice-regent upon earth The relationship of these two deities to each other, and to the other gods of the Hindus, is indefinite, varying according to tribe or locality. To the Ahīrs who sing the song of Lōrik, Indra, though sometimes addressed as a single person (for example, verse 267), generally appears as a group of seven brothers, inhabiting with their wives a heaven named Indrasana, and situated (verse 270) on

¹ II, 133 ff.

Mount Kailāsa. Durgā is their sister, and at some unspecified time the eight had divided their landed property, — exactly as we now see every day in Bihār, — the world of mortals falling to her share, while her seven brothers retained Indrâsana. But here relations begin to be complicated. Durgā is not only the sister of the seven Indras, but is also the sister of Mahādēva. There is no suggestion that she is his śakti, or his wife. On the contrary, she (126) addresses him as brother, and he (130) addresses her as sister, terms which no Hindū married couple could possibly use to each other. As in classical legend, Mahādēva is shown as performing arduous austerities, but, unlike the destroyer of Ananga, he displays no resentment when Durgā interrupts him, or when she unmasks a trick that he has played upon her, by hiding Kṛṣṇa under his armpit

This brings us to Kṛṣṇa, whose name naturally turns up in an Ahīr legend. He is not the Kṛṣṇa of the Mahābhārata, the Yādava king of Dvāraka, but the youthful Kṛṣṇa whose pranks among the cowherds of the Vraja-maṇḍala are a favorite subject of Hindū story In our poem he is little more than a favorite servant of the Indras, for whom he acts as masseur. When Durgā wishes to take him down with her to the world of mortals, they are most unwilling to part with him, but finally, under pressure, give their consent.

The account given of the death of Kamsa differs materially from that with which students of the *Bhāgavata Purāna* are familiar. It is true that Kṛṣṇa on his birth is hidden away from him among the cowherds, but thereafter the story skips straight away to the well-known episode of Kṛṣṇa's theft of the garments of the herdmaidens ¹ These girls complain about his conduct to Kamsa (337) Kṛṣṇa, when Kamsa remonstrates with him, retorts by threatening to cut off his head, and Kamsa agrees to be decapitated, provided Kṛṣṇa could perform two tasks—to twist a rope of ashes, and to weave a cloth of smoke Kṛṣṇa performs both (the poem does not say how), decapitates Kamsa, and takes his kingdom.

Durgā, having been allotted the world of mortals, descends from Indrâsana to take possession of her property. The mortals take her for a demon, and refuse to worship her, so that she has to spend the night sitting on a dunghill. According to the second recension, there were three persons in the world, whose wickedness she could not endure. These three, in subsequent cantos, appear as the chief villains of the

¹ It may be noted that the herdmaidens are called by the general term Rādhikās. We know that, in Sanskrit literature, the name of Rādhā is later than the Rhāgavata Purāna.

story. Whatever the cause, she returns in indignation to the Indrasana and demands that the Indras should give her Kṛṣṇa as her personal servant. After many subterfuges on their part, and many impish tricks on the part of Kṛṣṇa, she gets him, and arranges for his birth, in an avatāra, — or, rather, in an avatāra of an avatāra, — in the person of Lōrik, and so the first canto ends. The poem is called a Gūt, or song, because, in recitation, it is sung or, rather chanted; but, although uttered in short sentences, it cannot be said to be in verse. Like other folk epics of northern India, it is composed in brief clauses, the length and general swing of each of which are governed by the convenience of the singer's breath and by the rhythm of the chant. Whatever these clauses are, they are certainly not verse, whether we measure by accent, by length of syllables, or by counting syllabic instants

The language of the poem, of course, varies from place to place. As recorded for me it was naturally couched in the dialect of the Gayā district, that is to say, in the Magahī dialect of the Bihārī language, which, with a few slight irregularities, is the same as that described in volume III of my Seven Grammars of the Dialects and Sub-dialects of the Bihārī Language, and on pages 30 ff of volume V, part 2, of the Linguistic Survey of India Attention may be drawn to the common employment in the text of interjections, usually little more than pleonastic. Note, however, that $h\bar{o}$ is used in addressing a male, and $q\bar{e}$ when addressing a female Kī rē daībā, literally "What, O Fate!" is a common equivalent to our "Lo and behold!" or "What do you think happened next!" A typical Magahī interjection is $r\bar{e} - O$! In other parts of India the use of this word is more or less insulting, and, except in abuse, its employment is prohibited by good manners But, even in ancient times it was noted as a word of customary conversation in Māgadhī Prakrit,2 and in the modern speech of the Magadha country, or Magah, it is very common, and, especially in interrogative sentences, is used without the slightest tinge of disrespect. There are many stories based on this peculiarity of the Magahī dialect. For instance, we have the verse ---

> Magah dēs hai Kañcan-purī dēs bhalā hai, bhākhā burī rahalū Maggah, kahalū 'rē,' tekarā-la kā marabē, rē

¹ She threatens to curse the seven Indras with impotence if they will not comply This is a favorite curse of Durgā's, and is the *Leitmotiv* of a subsequent canto

² Compare the $Pr\bar{a}krta$ -kalpataru, II, 11, 28 (Māgadhī section), $samb\tilde{o}dhan\bar{e}$... ' $al\bar{e}$ ' ca ' $l\bar{e}$ $l\bar{e}$.' There is a somewhat similar use of $r\bar{e}$ in modern Bengali

Magah land is a golden scene,

The country's fine, but the speech is mean.

I lived there once, and hence my "rē"

Why do you drub me, rē, Sir, pray?

The unfortunate speaker of this doggrel had once lived in Magadha, and had acquired the habit of using $r\bar{e}$ in every sentence. In some other part of India he does this and gets a drubbing for the insult; yet, so ingrained is the habit that, even while apologizing, he utters the objectionable word.

THE BIRTH OF LORIK

The venerable Indras are seven brothers. The eighth is a sister, Dēvī Durgā. The venerable Indras are the rulers of Indrâsana. They divided (their kingdom) between the brothers and the sister. (5) The Indras took the Indrâsana as their kingdom. They gave the world of mortals to Dēvī Durgā. Dēvī Durgā came to (her) kingdom, the world of mortals She stayed the whole night in (her) kingdom, the world of mortals. When Dēvī came to (her) kingdom, the world of mortals, (10) no man utters the name of Dēvī in the world of mortals All night long she tarried in a lane on a dunghill No man repeats the name of Durgā. This is what the (men) of the world of mortals say, — "She who has come is a Huṇdī, a Rākṣasī (15) O children, she will devour you all"

She passed the whole night amongst the mortals At dawn she arose and went to Indrâsana Lo and behold, she enveloped her whole body in fire Durgā enveloped her whole body in flames (20) As a pan (of coals) was she blazing, and her matted locks were dishevelled Dēvī came before the court of Indrâsana She was going along in furious rage Lo and behold, her body is quivering in wrath Dēvī Durgā stood by the door-frame. (25) The Queens of the Indras raise their eyes and see her. Then out speak the Queens of Indra "Hear, O hear, Lord Indras Lords, what (useless) Cutcherry are ye holding Your sister is standing at the door (30) Lords, she hath already cursed you with a curse. Lords, ye seven brothers will now be childless Lords, this is now the curse which she hath uttered O Lords, the whole of Indrâsana will be burnt to ashes Dēvī will not leave us even a place for sitting"

(35) The venerable Indras are seated There also is seated their Guru, Mōhan Bariyā Bhāgīrath (that is, the Ganges) Four brothers who were Prime Ministers, Headmen, were also seated there The venerable Indras then spoke out "Hear, O hear, Sister Dēvī. (40) To thee, Sister, divided we out thy share To thee fell as thy share the kingdom of mortals. To us fell as our share Indrâsana. Lo, we re-

mained in Indrasana. Thee did we send to the kingdom of the mortals. (45) What kind of trouble hath come to thee among the mortals? Why, O Dēvī, hast thou returned to the court of Indrasana?" To this did Dēvī make reply. "Seven brothers, did ye take Indrasana for your kingdom. To me did ye give the world of mortals and sent me thither. (50) All night long did I tarry in a lane on a dunghill. No man in the city utters the name of Durgā This is what the mortal people say. 'She who has come is a Huṇḍī, a Rākṣasī. She will devour you all.' (55) These are the words the mortal people say.

Now will I not return to the kingdom of mortals. Until ve give me Acyutananda (that is, Kṛṣṇa) as a servant, till then will I not return to my kingdom of the world of mortals." To that do the Indras make reply. (60) "Hear, O hear, Sister Devi. Sixteen hundred servants are there in Indrasan. O Sister, select thou a servant, and carry him off by his topknot." The sixteen hundred servants did the venerable Indras make to stand (in a row). They made them to stand close to Durgā. (65) Upon them does Durgā cast her eves Now out speaks Dēvī Durgā. "Hear, O hear, Brother Indras. Wherefore show ye me these servants? Until ye give me Acyutananda as a servant, (70) Brothers, till then will I not return to the kingdom of the world of mortals " Then out speak the venerable Indras. "Hear, O hear, Sister Devi Where wilt thou get Acyutananda? Sister, that servant is dead or is lost" (75) To that gives Dēvī Durgā answer. "Hear, O hear, Brother Indras This speech of thine believe I not. Brothers, give ye so much an answer as this. Wherever ye shall conceal my Acyutananda, (80) there will I have power to gain that servant So much consent. Indras, give ye to me, or else, Indras, will I search for the servant, and pull him forth" To that gave the Indras answer "Wherever thou mayst find Acyutananda, (85). Sister, from thence search for him, and pull him forth" Such was the command that the venerable Indras gave

Round and round does Dēvī search through Indrâsana, but nowhere findeth she Acyutananda. From thence went forth Dēvī Durgā, (90) and behold she came to Nandan's forest In the Nandan forest are there sixteen hundred nymphs $(par\tilde{\imath})$ Acyuta was making the sixteen hundred nymphs to dance in the Nandan forest Every nymph that does not dance in the Nandan forest, her head does Acyutananda cut off and make into a $digr\tilde{\imath}$ (a kind of musical instrument) (95) He cuts up her body, and makes of it a drum. He cuts up her thighs, and makes of them a fiddle. He cuts up her arms and makes of them a fiddle-stick. Thus was he making the sixteen hundred nymphs to dance in the Nandan forest, when, lo, there came there Dēvī Durgā.

(100) Acyutananda looks towards Dēvī Durgā. He fled off to the Bailī flower garden (or to the garden of Bēl trees). Dēvī Durgā asks from children for his traces. "Hear, O hear, master children. The man who was now superintending a dance, (105) Sirs, whither has that man fled?" To that now give the children answer. "Hear, O hear, Dēvī Durgā. The man who was superintending the dance, his glance fell upon thee, O Durgā, (110) and, lo, he fled to the Bailī flower garden." Durgā arrīved at the Bailī flower garden. Round and round does Dēvī search through the flower garden, but, lo, nowhere does she find the darling Acyutananda.

From thence did Devi advance in further search (115) Behold, she went to Mahādēva's flower garden Round and round does Dēvī search through Mahādēva's flower garden, but, lo, nowhere does she find the darling Acyutananda From thence did Dēvī advance in further search. Behold, Durgā approached Mahādēva. (120) The venerable Mahādēva was seated in an arduous worship (pūjā) (under the rules of this worship) there was no permission for him to arise. Now the venerable Mahādēva is burning a maund and a quarter of ghī and bdellium. Now the venerable Mahādēva is seated with his face to the East. Behold, he is seated in the prescribed position (125) Then out speaks Durgā to Mahādēva "Hear, O hear, now, O Brother, In an arduous worship art thou seated Lo, Brother, where hast thou put Acyutananda?" To that gives Mahādēva a stately reply. (130) "Hear, O hear, O Sister Dēvī. Hither came not Acyutananda Behold, he would be in the court of Indrasana" Then out speaks Dēvī Durgā "From hence, Brother, will I not turn to go (135) Until thou raise up both thine arms, till then will I not move a step back" So many words did Durgā speak out, and behold the venerable Mahādēva laughed aloud The venerable Mahādēva raised both his arms, (140) and, behold, Acyutananda now came forth (from below them). When Acyutananda came forth, Dēvī Durgā runs up and seizes him by the topknot Then out speaks Dēvī Durgā "Ah, how much trouble hast thou given me, Acyutananda (145) Lo, Acyuta come to the kingdom of the world of mortals" Then out speaks Acyutananda. "Hear, O hear, O Devi Durga I will not go, until I have (first) gone to Indrâsana. Lo, Durgā, till then will I not move a step to the world of mortals"

(150) From thence went forth Dēvī Durgā and Acyutananda. Behold, they both went to the court of Indrâsana. He went, and Acyutananda stood there He went, and stood in Indrâsana. Behold, he stood close to Indrâsana. (155) The Indras raise their eves and see him.

In their hearts do the venerable Indras grieve. "What tyranny hast thou done, O Dēvī! that, lo, O Dēvī, thou hast sought out and found the darling Acyutananda. Lo, sixteen hundred servants were there for thee in Indrasana. (160) Lo, from them thou mightest have selected a servant, and have carried him off by his topknot. But thou hast selected and taken our peculiar servant. Lo, Dēvī, into our soul cometh lamentation. Behold, thou hast made widows of all (the women of) Indrasana. Ah, thou art taking away for good our jewel. (165) We Indras are seven brothers. To the seven was he the servant doing service. A servant who used to press (that is, could press) a seer and a quarter of mustard-seed in the palms of his hands (to extract the oil). He used to massage the limbs of us seven brothers. Great was the service that Acyutananda used to perform. (170) Ah Sister, the whole of Indrasana hast thou made desolate."

Then (again) out speak the Indras. "Hear, O hear, Acyutananda Forasmuch as our sister Dēvī hath seized thee by the topknot, Lo, go thou, a servant, unto the kingdom of the world of mortals." (175) Now out speaks Acyutananda. Weeping, weeping, does Acyutananda speak. With suppliant clasped hands does now Acyutananda make his petition "Hear, O hear, ye venerable Indras. Prepare ye the book with back of copper, (180) and thereon make ye a writing, O Indras. Whatever I shall tell you to write That, O Indras, write ye with pen and with ink-case." So many words speaks Acyutananda Then out speak the venerable Indras. (185) "Hear, O hear, Acyutananda. What kind of words are those that we shall write?" To that Acvutananda gives answer "Hear, O hear, ye venerable Indras This many are the petitions that I ask from you (190) Write ye these letters in the book (of fate) Until ye give me the horse Kātar, Krsna's steed, Until ye write for me two wives (seated) on my thigh Sixteen hundred nymphs are there in Indrasana. — Sixteen hundred with whom Krsna (once) sported on (the banks of) the Yamuna (195) Of these O Indras, two died virgins Two damsels who were washed away by the Yamunā and died. These two damsels write ve (as seated) on my thigh, and, venerable Indras, write ye something more Until ye write a brother at my back, (200) till then will I not move a step towards the world of mortals. Until ye give me the sword Maigar, that belonged to Bhīmasēna the Ksatriya, — unless ve write the sword Maigar for my arm, — till then will I not move a step towards the world of mortals. And, O venerable Indras, write ye something more. (205) What woman, and what man, may have performed austerities, What woman, and what man, may have slept on a mat of kuśa grass, - they who have so slept for twelve

years, — in her womb write ye my birth. Lo, then, Indras, will I set my foot towards the world of mortals."

(210) The venerable Indras are seated. And Gauri's Ganapati is also seated. The five Pandavas are also seated. There also is seated there their Guru, Mohan Bariyā Bhāgīrath. Lo and behold, four brothers who were Prime Ministers, Headmen, were also seated there. (215) They produce the book of copper (back). Lo, the four brothers, the Headmen and the Prime Ministers write First they write the horse Kāṭar, Kṛṣṇa's steed. Then they write the sword Maigar. They write the sword Maigar, that belonged to Bhīmasēna the Ksatriya Then they write the two women Then they write a brother to be at his back. To that last do the Indras give an answer. "Hear, O hear, Acvutananda. They write not a brother to be at thy back. (225) Obstinate fool art thou, thou dost not heed our words. Lo, Acyutananda, we have written for thee a foster brother A ready made foster brother will we send for thee Behold, Acvutananda, he will be a foster brother unto thee." Then write the venerable Indras, (230) "West of Gaurā lies Kalaundi village There dwell aged Kuar and aged Khulhan. Husband and wife, have they performed for twelve years asceticism in the world of mortals. 'Childless' and 'Barren' have the names been given them. While they have been doing asceticism, twelve years have passed. (235) Still the names of 'Childless' and 'Barren' have not departed from them. Dear One, now the thirteenth year hath begun. Now the man and wife are starting to drown themselves in the Ganges. In her womb have I written thy birth"

Then again did the Indras write these words. (240) Then they write a kingdom in the four quarters of the world Then do they write a crooked word. Lo and behold, they write a six months prison at Kōilā.

The writing and the reading were finished The accountant closes the book (245) At that very moment, at that very hour, Lo and behold, the wife and her husband are going to the Ganges to drown themselves While the wife and the husband were on their way, Durgā, as she slept, gave her a dream "O aged Khulhan, drown not thyself. (250) My servant Acyutananda of the Indrâsana, — I have already had the reading and the writing done, and am come, — Behold, O Khulhan, he will take incarnation in thy womb "At that very moment, at that very hour, lo and behold, Acyutananda took up his abode in her womb. (255) When the aged Khulhan had carried him in her womb for nine months, behold, in the tenth month Acyutananda took incarnation. When he took birth in the world of mortals, the Brāhmans were summoned, and they calculated his name. According to the constellations,

his name was Acyutananda, (260) and, lo and behold, his pet name was Lörik Khanjār.

Second Version

'Rām, Rām,' I cry when I rise, and when I sit. Had I known the name of Rāma, I would have erected a high sacrificial platform to him. I would have brought Ganges-mud from the Ganges, and have plastered with it the platform. At the time of fleeing, would I call on Mother Bhagēśwarī. (265) When night falleth, I would invoke Mother Durgā.

(End of the Invocation)

Then up and spoke Mother Durgā "The venerable Indra hath sent me to the world of mortals. When I came thither, I sat on one side. White ants settled on my thighs" (270) Then in the world of mortals up rose Mother Durgā, and went to Kabilās.¹ She dressed herself in patchwork and in rags Spreading out her hair so that it would fill a basket, she goes along with a castor-oil-tree stalk for a staff. She went, and Durgā stood at the door of Indrâsana. (275) The seven Indrabrothers trembled when they saw Durgā Then did the Indras address their sister. "In what thing art thou lacking that thou art come to Kailāsa from the world of mortals?"

Then up and spake Mother Durgā, "O Indras understand. Brothers, I have fled hither from the world of mortals (280) I cannot endure three sins (that are practised there) Such warriors have ye created in the world of mortals, King Harēwā, King Parēwā, and the warrior Jodhī Paurā King Harēwā is so base and vile Every captive that he prisoneth in his prison, (285) if he be old, each one dieth there, if he be young, there becometh he an old man King Harēwā's minister is Manār Jīt. He also is base and vile. He giveth each prisoner boiling water for his drink, (290) and for his eating, but a quarter of a seer each of cakes of broken rice and bran. Even from that the minister taketh the half for himself. Hungry and without food, man draggeth man and eateth the flesh of man. Such a man of violence is the warrior Jodhi of Bikatpur, powerful, but vile and base. (295) Sixteen hundred maidens hath he kept unmarried. When a wedding procession cometh to fetch the bride, he killeth the boy-bridegroom, keepeth the bride, and sleepeth with her for a single night. Once he hath destroyed her caste he abandoneth her. In Gaurā there was an aged Gōwālin. (300) Her name is

¹ The Hindi form Kabilās for Kailāsa is very old We find it in the Padumāvati of Malik Muḥammad (16th century).

Khulhan. Each morn, as she riseth, doth she bathe in the Ganges and offer incense and oblation. That woman is known by the name of 'Barren.' O Indras, give ye me my hero."

Then Mother Durgā stood up in the Indrasana. Then all the Indras said, "carry thou off thy servant" (305) Then Mother Durgā caught hold of Īśvara Mahādēva. Then away did flee Īśvara Mahādēva. Then did Durgā catch hold of Dāk and Dānava, but all the Dāks and Dānavas fled away. No one agrees to go to the world of mortals (310) Then went Durgā to the bank of the river Yamunā. There, in the form of a boy, was the revered Kanhaiyā (Kṛṣṇa) playing Then did Durgā catch hold of him by the arm. "Come with me, Child, to the world of mortals." "O Mother Durgā, I will not go for thee to the world of mortals. (315) Seven births have been mine in the world of mortals. Mother Durga, my first birth was a birth in the house of a fish Then did the sailormen net me, and support themselves by selling my flesh. Then, Mother Durga, was my birth in the form of a boar, and the huntsmen speared and killed me. (320) Then, Mother Durgā, was my birth from the belly of Dēvakī; and, Mother Durgā, my maternal uncle was utterly vile. He it was, Mother, who fettered my father and my mother, and bowed them in the prison-house My birth took place at midnight in the month of Bhādo Then all the Indras sent me golden dolls (325) Then the Indras filled the lying-in brazier with cummin and aniseed. Then the news went to King Kamsa, and King Kamsa came to search for me. Then just as used to rise the moon of the full-moon day, so, gradually, grew I up to be a youth (330) With my bamboo flute I had gone to the bank of the Yamuna. Then I, Kanhaiya, played the flute. and summoned the sixteen hundred Rādhikās. Then the sixteen hundred Rādhikās took up their curd-pitchers Then all the Rādhikās went to the bank of the Yamunā (They cried) 'He hath eaten up my curds and broken my pitcher (335) He hath grasped my arms, and hath pulled me about He hath torn my garments that I wear ' Then all the Rādhikās went to Kamsa and made complaint 'Hear, Kamsa, O hear my words. Kanhaiyā hath taken birth in Dēvaki's belly. (340) To me hath he done a dozen tyrannies' Then did Kıng Kamsa go unto the bank of the Yamuna. Then saith Kanhaiya, exhorting Kamsa 'Hear, Uncle Kamsa, O hear my word. Thou hadst done tyranny to my mother and my father. (345) Now will I cut off thy head, and take thy kingdom to my hand ' Then saith Kamsa, exhorting Kanhaiyā. 'Hear, O Kanhaiyā, hear thou my speech. Thou wouldest kill me, Kanhaivā, and take my kingdom to thy hand. Do thou fulfil for me these two things. (350) Twist thou for me a rope of ashes. Weave thou for me a cloth of

smoke. Then cut thou off for thyself my head.' Then did I, Kanhaiyā, twist for him a rope of ashes. And a cloth did I weave for him of smoke. (355) Then did Kanhaiyā cut off King Kamsa's head, and take for himself his whole kingdom to his hand."

Then Kanhaivā took to himself the form of a bee. Then the bee settled close by a flower. Then Mother Durgā caught him by the arm and seized him. (360) "Mother Durgā, if thou art confining me and taking me away, give the command as to what things I shall eat as food. What things, Mother Durga, wilt thou give me to drink? What weapons, Mother Durgā, wilt thou give me to (bear upon) my shoulder? To whom, Mother Durga, shall I be married?" (365) Then Mother Durgā gives reply. "For food wilt thou get, my son, eighty still-fulls (of spirit) each day, and eighty goats as a relish to it daily. A sword of eighty maunds 1 in weight will I give thee for a weapon. A shield of seventy-two maunds weight will there be for thee. (370) A dagger will I give thee, my son, of eighty-four maunds. The horse Katar will I give to thee to ride. Thy first marriage will be with Dauna Majar. Thy second will be an elopement with Chandain. Then wilt thou rule over the land of Bikatpur Agaurī (375) Then King Karingā will seize thee and imprison thee for six months Then for six months will he keep thee in a potter's kiln. For six months, my son, wilt thou remain in the River Gadānā. Though struck by iron, thou shalt not die In the furnace of fire thou shalt not die (380) In the river Gadānā thou shalt not die I write not for thee any kind of death. First, my son, shalt thou kıll King Karmā, and then King Harēwā." Then Kanhaıyā departed thence. According to the constellations the god Indra wrote his name as Banāwār (385) And, by love, his name was the heroic Lörik Now went forth Durgā to the ancient Khulhan, and Mother Durgā gave her a flower to smell Then the ancient Khulhan became pregnant, and on the ninth month Lörik came into existence (390) In the twelfth year Lorik became fully grown. Then his friend Rajal, the washerman, and Lörik used to wrestle by the pond, and there Sairā, the chaste, and Bijādhar, when the two saw Lorik, used to smile.

¹ A standard maund is equivalent to eighty pounds

THREE INDO-IRANIAN NOTES

By A V WILLIAMS JACKSON

1. A Suggestion to Connect Old Persian AG*R*[] with a Sanskrit Word.

THE fragmentary Old Persian word AG*R*[] in the Bahistān Rock Inscription of King Darius, Bh 1 21 (8), has long been a puzzle. The passage in which it stands reads as follows

Θātiy [Dāra]ava^uš xšāyaθιya^ a¬tar ımā^ dahyāva^ martiya^ hya^ AG¬R¬[] āha avam ^ubartam abaram, hya^ arıka^ āha avam ^ufrastam aparsam.

'Saith Darius the King Within these countries the man who was —? —, him I supported with good support; he who was inimical, him I punished (lit questioned, inquisitioned) with good punishment (lit with a good questioning, inquisition)'

The antithetical balance in the case of the adjectival participles (*ubaratam and *ufrastam) is obvious, and since the evil attribute arika* is now generally conceded to signify 'antagonistic, mimical,' or the like (cf Av ayra-), its antonym must mean the reverse of that A few observations, however, must first be made with regard to the reading itself and to the explanations proposed to explain the meaning. The more important of these are presented in their chronological order

Rawlinson's transcript of the cuneiform text, published in 1847 (JRAS 10 p xl, plate, cf p 199), gave $agat\bar{a}$, with t partly broken and \bar{a} supplied, this was rendered, with a question mark, 'of the true faith (?) ' Although Rawlinson's t was a mistaken decipherment and should be r, as King and Thompson's reexamination of the rock in 1904 proved, it is interesting as showing that his restoration $[\bar{a}]$ seems to indicate he thought that only a single letter was required at the end of this word. King and Thompson, The Sculptures and

¹ Benfey, Die pers Keilinschriften, 1847 (issued shortly after Rawlinson's work appeared), p 9 (cf 71), translated by 'truglos,' but this and his etymology may be disregarded Oppert, JA 1851, p 35, suggested āgantā, cf Skt āgantr, 'arrivant, étranger' Spiegel, Altpers Keilinschriften (2 ed 1881), p 202, wrongly emended as dauštā, 'Freund'

Inscription of Behistûn (1907), p. 5, give the correction of Rawlinson's t to r and read $agar[\ldots]$, with a footnote that the lacuna had space for two characters; they translate by 'whoever was a [friend],' as they similarly do in the case of the Susian (Elamitic) version (p. 97), and they render pi-it-ku-du in the corresponding Babylonian version (p. 262) by 'zealous.' As regards the question as to whether one or two letters be required to fill the lacuna in the Old Persian text, we must keep in mind below the apparent difference between Rawlinson and the view of King and Thompson. From experience one knows that it is sometimes not easy to determine such a space with precision. Unfortunately when I made four ascents of the rock in 1903, I did not have time to examine this particular word. Scholars have followed King and Thompson in assuming that two letters are missing, as will next be observed, but commented upon below.

Weissbach, when reviewing that work in ZDMG. (1907), 61.725, suggested to derive 'a-ga-ra . . .' from the root gar 'wach sein $+\bar{a}$,' and kept to this view later in his Keilinschriften der Achameniden, p 12, § 8, where he reads $\bar{a}gar[t\bar{a}]$ and translates by 'der umsichtig war.' Bartholomae, WZKM. (1908), 22 72, proposed to associate this attribute with Skt $g\bar{u}rta$ -, Lat $gr\bar{a}tus$ (comparing YAv. $\bar{a}gremaitis$) and to read the vocable perhaps as $\bar{a}gar[t\bar{a}]$, nom sg. of a noun of agency. Tolman, Anc. Pers. Lex and Texts, 1908, pp. 60-61, s.v. $\bar{a}gartar$, also takes it as a noun of agency, but prefers (like Weissbach) to derive it from a presumable OP. \bar{a} + *gar, 'to wake' (YAv. gar, Skt. gr, cf TPhl $v\bar{v}gar\bar{a}n\bar{e}d$) as 'a watcher, wakeful, zealous,' and translates (p 8) by 'watchful.'

The data presented above allow us to conclude that the legible part of AG-R-[] is practically certain and that the general connotation of the word is fairly clear, whatever may be its etymology. In what follows I am going to assume, with Rawlinson, that merely one letter is missing at its end; but only a renewed study of the rock itself, with careful measurements of the space itself, can settle the question.

At the risk, therefore, of having the proposal rejected, I venture to offer a new suggestion. This would be to read $\bar{a}gra^n[\theta a^h]$, not $\bar{a}gar[t\bar{a}]$, and to associate it with Skt $\bar{a}grantha$, from the Indic root grath-, granth-, 'to tie, knot, fasten, attach.' This Sanskrit word is at least found as an adverbial gerund in am (see PWb. 2 831; cf. Whitney, Skt. Gr. § 995) in Aitareya Brāhmaṇa, 5. 15 tad yathā punar āgrantham punar nigrantham antam badhnīyāt, 'just as one would bind the end, tying (or attaching) it with a knot again, (and)

again tying (or attaching) it down.' ² At any rate it gives us a hint, and my notion would be to take the presumable OP. $\bar{a}gra^n[\theta a^h]$ as an adjective, with passive sense, conveying in general the idea of being bound by the knot or tie of allegiance, like the somewhat rare Eng. 'alligate,' from Lat. alligo. If so, $\bar{a}gra^n[\theta a^h]$ would mean 'attached, devoted, loyal,' as opposed to $arika^h$, 'inimical, hostile, refractory.' Whether this suggested etymology has anything in it, or not, remains for the specialists to decide.

2. Turfan Pahlavi $d\bar{a}\check{s}\bar{\imath}n$, a Sanskrit Loan-word in the Manichaean Fragments.

The word TPhl. $d\bar{a}\bar{s}\bar{i}n$, meaning 'gift,' occurs several times in the Middle Persian Manichaean texts brought to light by A. von Le Coq through his memorable discoveries in the Turfan Oasis, Central Asia, early in this century, and first deciphered and published in part by F. W K Müller. Five instances of $d\bar{a}\bar{s}\bar{i}n$ are thus found in Müller's Handschriften-Reste, Teil II, Berlin, 1904. These occur respectively in Frag. M. 47 recto, lines 4 and 5 (the latter written defectively as $d\bar{a}\bar{s}n$); M. 74 verso, ll. 14, 16, 18; see Muller, op cit, p. 84 (bis), 76-77 (tris). In his glossary, C. Salemann, Manichaeische Studien, I..p. 65, St. Petersburg, 1908, accepted the meaning of $d\bar{a}\bar{s}\bar{i}n$ as 'Geschenk,' but had no etymological explanation to offer for this signification. W Bang, 'Manichaeische Hymnen,' in Muséon (1915), 38' 21, gives a Turkish form dašin (but without precise reference) as likewise meaning 'Geschenk,' and adds in a footnote, 'ich darf das tuerkische Form des Wortes den Iranisten empfelen.'

The Iranist naturally thinks of Av dăšina-, Phl. dăšin, as a related form, but in that case the meaning is confined to 'dexter, the right side.' The key lies in the hand of the Sanskritist, who can at once produce both the Skt adj. dāksina-, 'relating to the sacrificial gift or to a gift in general,' and the neut. noun dākṣiṇam, as denoting such 'a gift or collection of gifts' (comparing also the fem. noun dākṣiṇā-, 'gift, donation, remuneration'). Thus the Turfan Pahlavi term dāšīn, 'gift,' in Central Asian Manichaeism is plainly a loanword, borrowed from the Sanskrit, and its etymology is clear

² Keith, Rigreda Brāhmaṇas the Attareya, etc (1920), p 237 translates, 'twining it again and again intertwining it'

3. Can the Word sam in a Turkish Manichaean Hymn be of Indic Origin?

In a Turkish Manichaean Hymn, the text of which was first made available by Le Coq, Türkische Manichaica aus Chotscho, III, Berlin, 1922, p 47, Nr. II, recto, and later translated with comments by W. Bang, Muséon (1925), 38. 41-42, there occurs the word sam. It is used in connection with the blessings brought to the world through Mānt's having preached the gospel of salvation in his 'Evangelium' (Turk. awanglion, cf. TPhl. 'evangeliyon), here exalted as the 'Jewel of the Law,' by following the teachings of which the way of release is found. The particular sentence (ll. 3-4) in this passage to which attention is here called runs as follows in Bang's transliteration and translation ozyu qutrulyu yol yıñaqıy ol nomta ašıtip uqar [am] sam, 'den Weg der Rettung und Erlosung in jener Lehre (Predigt?) horend, versteht man das Heilmittel (?)'

In his translation of the sentence we observe that Bang has translated sam by 'Heilmittel (?)' with a query, adding in his comments (p. 47H), 'Etymologisch ist sam ganz unklar.' Perhaps a suggestion might be made to help clear up the etymology.

Although my knowledge of Turkish in the Manichaean documents is extremely limited, I would hazard the conjecture that sam may be a word of Indic origin, finding its way into Central Asian Manichaeism through Buddhism. If so, especially as it is plainly a word full of religious significance, I would suggest comparing it with the familiar Sanskrit word śama-, Pāli sama-, in the sense of 'tranquility, repose, cessation, final emancipation' In that event the sentence as applied to the teachings in Mānī's 'Gospel,' would become pregnant with meaning, as follows: 'On hearing the way of rescue and release one comprehends (perfect) tranquillity,' i.e., the spiritual calm which brings final emancipation We are familiar with Buddhist elements in Mānī's syncretic religion.
